BOOST FOR POULTRY

National War Emergency Poultry Federation, Washington, D. C., is making a campaign to teach the true food value of poultry and eggs, to keep up a fair demand for them, and to make a monthly survey of the magnitude and resources of the poultry industry. To the end that the comparison may be as effective and as extensive as possible, the commision asks that at least 25,000 poultrymen of the nation aid to the extent of sending $1.00. Address the commission at 918 F St. N. W., Washington, D. C.

The tragedy of life is not death, but the prostitution of the soul.

SOLDIERS OF THE COMMON TASK

The soldiers of the Common Tasks—
They do not dwell in tents;
In house and school, in shop and field
Arise their battlements.
They do not wear a warrior's dress
Nor march to thrilling drums,
Yet mighty in their lowliness
They fight till Wrong succumbs.

The Soldiers of the Humble Deeds,
Who save the light and heat;
Who keep with joy the holy fast
That gives the starving meat;
The woman whose swift needles clothe
The bearer of her lance;
Yea, every praying, toiling heart
Defends our flag in France!

The Soldiers of Obscurity—
They hide their wounds and grief
And guard against despair and doubt
The forts of their belief.
They keep the faith, for on them rests
Their great Republic's fate—
From them its heroes draw the strength
To shield and save the State!
—Daniel M. Henderson of Vigilantes.

WHAT IS IN THE GERMAN NODDLE?

WHAT do the Germans think about it?

We have counted the odds and the conclusion is inevitable; there is no chance for Germany to win.

The Germans, also being able to count, must have come to the same conclusion. What then is in the German mind and heart as they continue to fight a desperate and hopeless fight that can have but one ending?

The answer is not very difficult. From their own mouths we know pretty well how the German have "figured it out."

Briefly stated, their hope is to hold the line on the west front while they build for themselves a strongly defended nest in Russia.

The military caste, which still rules the German empire, states the case somewhat as follows to its own inner consciousness:

"We have failed in our effort to lick the world and establish an empire reaching from the Persian Gulf to Hamburg. We have also made the whole world hate us. There will come a very hard time immediately following the war. We will have to suffer a trade boycott. The thing for us to do is to dig into Russia. We will build up a trade there to compensate us as far as possible for the world trade we are sure to lose.

"Having bullied the Russians into a practical monopoly of their trade we will sit tight and wait.

"We will carefully and secretly lay our plans for another war. Sooner or later, the nations now forming the Entente will fall apart. Then our chance will come. We will leap at the throats of the separated Allies. We have made some serious mistakes in this war. We will not make them again. In the next war we will whip the world to a standstill."

That, in a nutshell, is the German idea.

Had it been possible, the Germans would have wrenched the French and English armies apart; driven the British back into the channel; taken Paris and ended the war then and there last March.

It not being possible (and they never more than half believed in it), the Germans have fallen back on a substitute plan of national procedure as subtle and as dangerous to the world as was the Mittel Europa scheme, now abandoned.

This new plan, like all German world ideas, is a mixture of army, diplomacy and commerce.

The real theory of the kaiser's Hamburg-to-Bagdad world dream was to cut England off from India and drive a tap pipe into Africa and South American trade.

This world dream has now become an acknowledged impossibility. The Germans frankly admit that the efficient safeguarding of the Suez Canal, the British advance in Mesopotamia and conquest of Palestine have blocked the way to the Persian Gulf.

The collapse of Russia, however, has provided a complete substitute for this enormous and far-reaching conspiracy. For the Hamburg-Bagdad idea, the Germans have simply substituted the "Looking toward the East" policy so dear to the heart of Bismarck.

It is in every way as dangerous as the other. It simply changes the route. Instead of cutting England off from India, it has for its objective the penetration of India itself along a new route that borders the Caspian Sea and crosses Afghanistan. For the trade of Africa and South America, it substitutes the trade of Russia.

With Russia as a meal ticket, the Germans figure that they can eke out a living until "Der Tag" comes again, when they hope to go crashing through the Khyber Pass into India—the heart of the British empire.

A certain time, however, must elapse before they can establish themselves in Russia. To gain this time, they are fighting desperately to hold back the American and the French and the British on the west front. They have no hope left of victory in France. They are in their hearts resigned — completely resigned — to the surrender of Belgium. They want to hold Lorraine on account of the iron mines. Otherwise they have no real ambition in Western Europe.

All they want is to keep us busy elsewhere while they build their commercial fences in Russia. Having done so, they will eagerly sue for peace. Then sit down and wait for a chance to bring about another world war.

None of the above statements are guesswork. They are the demonstrable facts of the situation.

Anyone with the slightest knowledge of military matters can see Germany already at work on her next world war.

Her conspiracy to dig into Russia's commerce and her plot to seize the Russian path to India can scarcely be called "conspiracies" or "plots." In the east, Germany is working flagrantly and in the open.

Her specific plan has been made clear. She hopes to organize Russia into a succession of little republics, each bound to herself by an organic treaty, and each subtly egged into a sullen enmity against the other dinky little republics.

It cannot be denied that the scheme is devilish in its cleverness. The kaiser takes advantage of the fact that the Entente Allies are fighting for the right of self-determination of small nations. Therefore he hatches out a republic in Finland and another in Poland, etc., and asks the Entente, "What! Would you force this poor little country to go back into the grip of tyrannical Russia!" Meantime he maneuvers to control the aforesaid small nations by German agents.

Summing it up this is what is in the German mind at this juncture:

To hold fast on the west front until they have arranged for the monopoly of Russian commerce; then peace at any cost of western sacrifices. Then to wait for a chance to make another war. The first breach between the

The Cultivator Patterns

8964—Boy's Suit. Cut in sizes 2, 4 and 6 years. The blouse buttons at center front; the straight trousers are included in the pattern.

8931—Ladies' Slip on Waist. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The model may be either gathered or tucked across the front and back at the slightly rounded neck.

8944—Infant's Coat and Cap. Cut in one size. The outfit consists of a coat and close-fitting cap.

8959—Ladies' One Piece Apron. Cut in sizes 36, 40 and 44 inches bust measure. The apron is belted in at the normal waist-line with a belt of the material.

8933—Ladies' and Misses' Dress. Cut in sizes 16 and 18 years, and 36, 38, 40 and 42 inches bust measure. A simple design which carries out the idea of combining materials in a new way is shown in this number.

8956—Girls' and Juniors' One Piece Apron. Cut in sizes 8, 10, 12, 14 and 16 years. The apron is very simple to make as it is all in one piece.

8934—Ladies' Skirt. Cut in sizes 24, 26 and 28 inches waist measure. The lower edge of the skirt is straight, and the closing is at the left side front under a tuck.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

nations now composing the Entente will be the signal for the next war.

"They got together and licked me this time," snarls the kaiser. "Next time I will see to it that they do not ge together."

That is what is in the minds of the German military caste.

What should be in our minds is to see to it that there shall be no German military caste left to carry out this plot.—L. A. Times.

Food

SWEETEN UP WITH SORGHUM

SORGHUM is not like molasses, a sugar-house by-product, but an unmixed syrup made directly from sorghum cane by crushing and boiling. The grade and color of the syrup will depend on the making. If the syrup is allowed to caramel or burn on the side of the pan, a dark, strong syrup will result. Lime is used by some makers to overcome the acidity of the raw juice. Where this has not been done in the making, housekeepers frequently heat the syrup with a pinch of soda before using it.

When a well-made, light syrup has been produced the next point is to prevent fermentation, for, after all the tang of sorghum syrup is mostly due to fermentation. Syrup that has been thoroughly sterilized by boiling will not ferment if poured hot into sterilized containers and sealed immediately. The tin quart can is the most convenient container for family use. Store in a cool place and you have a good all-winter table syrup and a fair substitute for sugar in desserts and jam making. When recipes call for sugar use half and half sorghum and corn syrup or sorghum and sugar or use sorghum alone.

Sorghum for Jam

Canned fruit pulp or stewed dried fruit may be converted into jam or butter whenever the sorghum syrup is available. Allow one cup of sorghum to four cups of fruit pulp. Season with spices, ginger or lemon, cook to a jam, refill sterilized jars, process and seal. Crushed peach kernel will add flavor to peach butter.

Sweet Pickled Beets

One-half gallon baby beets, three cups vinegar, one-half teaspoon salt, three cups sorghum, three tablespoons mixed pickled spices.

Boil together for three minutes, vinegar, sorghum, salt and spices. Cook beets until tender, skin and pack in one-half gallon jar. Pour boiling liquid over them filling jars. Fasten covers on tightly and store in dark place to cool. Canned beets may be used for this recipe. Pears and peaches may be pickled with sorghum syrup and it is especially good with spiced grapes.

Sorghum Lemon Sauce

Two cups sorghum, one cup boiling water, two teaspoons cornstarch, juice two lemons, grated rind one lemon, two tablesoons butter (added before removing from fire).

Sorghum Cake

One-half cup fat, one and one-half cup sorghum, one cup boiling water, one-quarter teaspoon salt, one teaspoon ginger, one cup flour, one cup substitute flour, two eggs, one teaspoon soda.

Cream the fat, and add the sorghum, and the boiling water. Add the sifted dry ingredients to the first mixture. Add the eggs last. Bake the cake in a loaf or in a shallow pan in a moderate oven.

Apple Sauce Variation. To two cups of apple sauce, cooked until very thick, add one tablespoon butter, three tablespoons of syrup, and cinnamon as desired. Spread the apple sauce one-half inch thick over the bottom of the pan. Pour the cake batter over the sauce, and bake it in a moderate over. When the cake is done, turn it out of the pan so that the apple sauce is on top. Cut it in squares, and serve warm.

War Cake

Two-thirds cup shortening, one and one-half cups sorghum, one and one-half cups water, one cup dates, raisins or prunes, one teaspoon salt, two teaspoons cinnamon, one teaspoon cloves, four cups flour, two teaspoons baking powder, three-quarters cup nut meats (if desired), one teaspoon soda dissolved in two tablespoons hot water, one-half teaspoon nutmeg.

Mix shortening, water, syrup, spices and raisins and boil for about three minutes. Pour into mixing bowl and allow to cool. Sift flour and baking powder, add all at one time to the liquid mixture, beat well, add nuts if desired, and, just before pouring into oiled and floured pans, dissolve the soda in the hot water and beat into the batter. Bake in loaf pan in moderate oven about an hour.

Sorghum Pie

Two cups sorghum, one tablespoon butter, four eggs, pinch of salt.

Boil syrup and butter together, pour over eggs beaten with salt, stirring briskly. Have pie pans ready lined with crust. Pour in and bake. Chopped nuts sprinkled over the pie after baking add the finishing touch to this pie. This quantity will make two pies.

TYPEWRITER SATISFACTORY

"How do you like your typewriter?" asked a salesman of one of his customers.

"It's most satisfactory!" was the reply. "I wonder how I ever got along without it!"

"That's fine! Would you be willing to give me a little testimonial to that effect?"

"Why, certainly I will," and according to Everybody's Magazine, he pounded out the following:

"after Using thee automatig Back action atype writ, er for thre emonths $an d Over. I unhesittatinggly pronounce it prno nce it to be al ad even more than thee Manufacturs claim? for it. During the time been in our possessio e. i. th ree monthz! id has more th an paid for it$self. in the Saveing oF time an d labrr?' John 1 Snith."—Youth's Companion.

SLIGHT DISTINCTION

"But, my dear madam," said the admiral, "it is hard to discuss these matters with one so unfamiliar with the terminology of the subject. You remind me of the young wife who was speaking to her brother about her volunteer husband:

"'Isn't Jack just wonderful?' she said. 'He's already been promoted to field marshal.'

"'From private to field marshal in two months? Impossible!' said the brother.

"'Did I say field marshal?' murmured the young wife. 'Well, perhaps it's court-martial. I know it's one or the other.'"—Youth's Companion.

"Hurrah! I hear the reveille—
I love to hear it summon me;
I love to get up mornings, too;
I do, I do—like hellidoo!"

JOHN L. ON THE HUN

Shortly before his death John L. Sullivan had something to say about the Hun. "We're goin' to get that bird," he said, "we're goin' to get him sure. An' I'll tell you why I know. Because he got mad so quick. All that hate stuff, I mean. In the fightin' ring, when you see a man begin to boil up an' see red in the first round, you know that next thing he won't be able to see at all. What's my best words to the boys in camp? Just this: Tell 'em they can't go wrong if they keep their feet warm an' their heads cool, their eyes open an' their mouth shut."

CAT NEEDED TUNING

The landlady bustled up to her new lodger as he came down to breakfast the first morning.

"Good morning, sir," she wheezed.

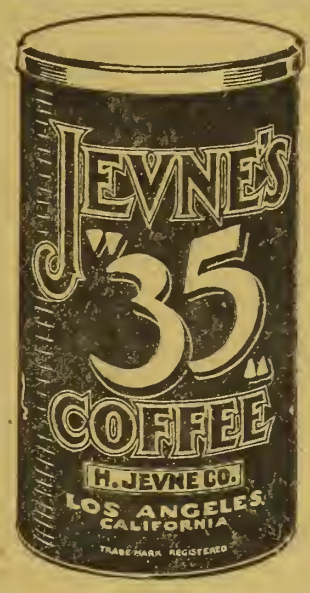
"Good morning," said the lodger.

"I hope you've had a good night's rest," said the landlady.

"No," said the mild mannered little man. "Your cat kept me awake."

"Oh," said the landlady, tossing her head. "I suppose you're going to ask me to have the poor thing killed."

"No, not exactly," said the gentle lodger. "But would you very much mind having it tuned?"



Just say "thirty-five" to the grocer

No. 1 Barley Straw, bale .....50@80

GRAIN AND FEED STUFFS

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard white—	Per cental.
No. 1	3.66⅝
No. 2	3.61⅝
No. 3	3.55
Soft white—	
No. 1	3.63⅝
No. 2	3.58 1-3
No. 3	3.51 2-3
Club and Sonora—	
No. 1	3.60
No. 2	3.55
No. 3	3.48 1-3

For sacked grain add 9 cents per bushel of 60 pounds to above prices. Deduction of three-fourths of a pound is made for weight of standard grain bag. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to its merit.

Barley — No. 1 feed, 2.37½@2.45 per cental; milling, 2.55@2.60.

Oats — Red feed, 2.55@2.65 per cental for ordinary and 2.75@2.85 for choice; seed do, 2.90@3.10, with recleaned at 3.20 @3.40; black, 2.50@2.65 for feed and 3.00 @3.25 for seed; do, recleaned, 3.50@3.75.

SEEDS

Prices in round lots, lb.:
Millet, recleaned .....5@5½
Flax .....8@8½
Hemp .....5½@6
Rape .....2½@5

Citrus Fruit Market

Los Angeles, August 28, 1918.

Both lemon and orange market are exceptionally strong. Sales quickly made at long prices.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 13,167 cars, lemons 5154, total 18,321. To same date last season, oranges 36,899, lemons, 7297, total 44,196. Central California this season; oranges 2536, lemons 115, total 1650. Last season to same date; oranges 4665, lemons 164, total 4819. Northern California; oranges 203, last year same date 845.

AT THE AUCTIONS

August 21

New York: 10 oranges, 3 lemons, 1 grapefruit. Val. 6.45-10.05, lem. 6.30-7.65, grapefruit halves 1.70-2.75.

Pittsburg: 1 oranges, 2 lemons. Val. 5.25-7.70, grapefruit 1.35, lem. 4.55-6.45.

St. Louis: 1 lemon 4.75-6.05.

Boston: 2 oranges, 3 lemons and grapefruit. Val. 6.05-9.15, lem. 3.30-6.70, grapefruit 2.55-4.55.

Philadelphia: 2 Valencias, 1 lemon. Val. 6.15-8.80, lem, 7.40-7.85.

August 22

New York: 8 oranges; 2 lemons 1, grapefruit. Val. 5.45-9.40, lem. 6.85-7.65, 7.65, grapefruit halves 1.65-2.10.

St. Louis: 1 lem. 4.60-6.30.

Pittsburg: 1 lem. 2.95-5.65.

Boston: No sale, no arrival.

August 26

New York: 9 oranges, 4 lemons, 1 grapefruit. Val. 4.10-10.10, lem. 7.20-8.30, grapefruit halves .80-3.25.

Cleveland: 4 cars. Val. 8.55, lem. 3.75-5.70.

Boston: 1 Val. 3 lem. Val. 2.00-9.95, lem. 2.85-6.35.

August 27

New York: 7 oranges, 3 lem. Val. 5.10-9.80, lem. 7.50-8.45, grapefruit 5.30.

Boston: 3 cars. Val. 6.00-9.95, grapefruit halves, 1.50-1.55.

MARKET NOTES

The weather bureau notes intense heat and shortage of rain in the Ohio and central Mississippi Valleys. There has been little damage, however, in corn growing sections. Cotton and truck crops have suffered the worst.

California's late potatoes are coming up finely and a good crop is assured.

Arizona has been given some heavy rains and under new pasture live stock is improving in all sections.

Long staple cotton in the Yuma section has been seriously damaged by aphis.

California will produce 2,675,000 bushels of corn as against 2,400,000 last year.

California's production of wheat per acre this year falls short of that of last year, also of the average. The production this year will not average over 15 bushels. The 1917 average was not over 19.8 bushels, while that for the five years preceding was 16.4.

California's production of barley this year will total 34,220,000 bushels. Last year's production was 39,000,000 bushels.

Tomato prices made by canneries of California have been attractive and the shipment of fresh tomatoes has not been as heavy as former years.

This state's production of Mexican and California red peppers and pimientoes has increased 100 per cent over that of a year ago.

Colorado reports that she will market this year an immense crop of Honey Dew melons, one shipping point, Ordway, promises over 400 cars.

Oregon's production of onion sets will not be over 40 per cent of normal.

Tomato fields in Alameda, Sonoma, and Santa Clara Counties show considerable damage from disease and shortage of water.

Santa Clara County's crop of pickling cucumbers is short this year in both acreage and yield.

Heavy movement of onions, brown, yellow, and whites, is now beginnig in Central California. The labor situation is serious but transportation is better than last year.

Shipments of melons from the Turlock section have been reduced by cool weather. No more loss from car shortage.

Veal calves last week in the Los Angeles market commanded as high as $20.

Estimates now are that California's peach crop will be 75 per cent of normal. Because of high prices for the fresh fruit a larger percentage is being marketed in that way than before.

Idaho has only 22 per cent of her peach crop this year. She will ship out less than 100 cars.

Practically all Eastern eggs which have been in storage in San Francisco have been moved out, clearing the market for locals.

State Food Administrator Merritt has appointed a committee to investigate the two cent increase in price of milk asked by the California Milk Producers' Association.

Both local and Eastern markets for cantaloupes have weakened the past week.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending August 26: Apples, 17; apricots, 1; berries, 7; cabbage, 6; cantaloupes, 100; carrots, 3; casabas, 8; dried

apricots, 22; dried beans, 43; dried peaches, 1; dried figs, 1; dried prunes, 14; grapes, 663; lettuce, 10; mixed fruit, 54; mixed vegetables, 29; mixed fruit and vegetables, 37; mixed dried, 1; onions, 65; peaches, 332; pears, 390; peppers, 11; plums, 127; potatoes, 165; quinces, 1; raisins, 156; sweet potatoes, 1; tomatoes, 47; watermelons, 63.

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending August 19: Apples, 20; berries, 6; cabbage, 6; cantaloupes, 171; casabas, 8; dried apricots, 30; dried beans, 35; dried peaches, 1; dried peas, 1; dried prunes, 12; garlic, 4; grapes, 480; lettuce, 8; mixed fruit, 119; mixed vegetables, 54; mixed fruit and vegetables, 19; mixed dried fruit, 3; onions, 60; peaches, 434; pears, 388; peppers, 1; plums, 164; potatoes, 178; quinces, 1; raisins, 137; tomatoes, 25; watermelons, 112; Arizona peaches, 1; Mexican watermelons, 2; New Mexico. Cabbage, 4; peads, 9; potatoes, 2; watermelons, 3.

Pigs Dying

Have been raising hogs three years with very good success until war conditions made it impossible to get the kind of feed I want. Now I lose pigs frequently from no apparent cause. Opened one after it died and it seemed to be in good order unless the liver may have been a little too large. They have plenty of so called hog feed, charcoal, salt, tankage and green beets. They have good quarters; thoroughly cleaned and disinfected. There are no signs of cholera. Please advise through the Cultivator.—Subscriber, Buena Park.

It is hard to decide what is wrong with the pigs. Would advise letting them run on pasture even if it be only a small one. Put the lot in alfalfa if possible or give some alfalfa hay to bulk up the feed. Do not give too much salt and once or twice a week add some baking soda to the feed. It sweetens the stomach and aids digestion.

Bloody Milk

I have a cow that is a very rich milker but lately one of the teats seems to be affected as there appear clots of blood when milking. Otherwise the cow seems to be in good health. Would like to know if this would affect the milk in the other quarters, as I have several customers for the milk. Would it affect the rest of the udder? What is the cause and what is the remedy?—Subscriber, Burbank.

The bloody milk is probably caused by a bruise on the udder. Those troubles usually amount to very little if properly cared for but if neglected the inflammation might spread and involve the other quarters also. It would not affect the milk in the other quarters unless the inflammation extended to them. Rub the quarter carefully with the hands and be sure to milk it out clean. Also give some salts to thin the blood. Mix three pounds of epsom salts and one and a half pounds of common salt and give a large handful of the mixture in the feed once a day or if the cow refuses it in the feed then dissolve it in a quart of hot water and when cool give it as a drench.

Book Review

PROGRESSIVE SHEEP RAISING

Armour's Bureau of Research and Economics, Chicago, offers to send without cost "Progressive Sheep Raising," by R. H. Deloach. It is a 60 page booklet, a little more than pocket size, with illustrations of practically all breeds of sheep, methods of handling mutton, and in addition a number of drawings of feeding racks and labor saving appliances which will be of interest to sheep raisers.

Send our boys the fuel, and they will supply the steam.

CALIFORNIA CATTLE SITUATION

By D. J. Stollery

Plans with reference to the organization of the cattlemen of the state are proceeding apace, and within two months meetings will be held throughout the five zones in order to ratify a constitution and by-laws and proceed to the election of directors. It will not be amiss to briefly review the suggested method of organization. The state will be subdivided into five zones, the Northern, Sacramento, San Joaquin, Western and Southern. Delegates from the county associations within a given zone will meet in a zone convention and there elect five representatives from that particular zone to act on the board of directors of the central organization. This will, therefore, create a directorate of 25, and will result in complete representation of the entire state. It is possible that an active manager will be appointed for each zone who will devote his whole time to association affairs.

Particular stress must be laid on the necessity for organization. Events of the past few years have shown that important as is the live stock industry of this state, it is practically impossible to secure intelligent data, while in the amelioration of any problems the solution of these has been heretofore a purely local matter. With the combined efforts of the "brains of the cattlemen," the scope of the industry can and will be greatly strengthened.

One of the first matters with which the organization will deal is the taking of a census of beef cattle throughout the state, also suggestions from the cattlemen as to what shall be done in enforcing the provisions of the "Hide & Brand Bill" relative to inspection of cattle shipped or slaughtered. The suggestion has been made that responsible cattlemen be appointed inspectors, and in view of their practical knowledge this is a most logical method.

Feed conditions within the state this year are, of course, serious, and our troubles are by no means over. A review of conditions in the state bordering on California indicates a similar shortage of feed, and the only state with any surplus feed, of which we have knowledge, is Nebraska. The necessity for conservation of feed stuffs and their increased production is becoming more and more apparent and the interchange of ideas which organization will bring, will greatly benefit the cattlemen of the state at large.

A meeting of cattlemen from Zone No. 2, which is the Sacramento district, will be held at the Traveler's Hotel, Sacramento, on Thursday morning, September 5, at 10 a. m., and a cordial invitation is extended to all cattlemen throughout the state to attend this meeting.

BEEF CATTLE AT THE FAIR

The beef cattle showing at the state fair promises to be better than ever before. In the Shorthorn class the following will be well represented: W. M. Carruthers of Live Oak, Hopland Stock Farm, Pacheco Cattle Company of Hollister, and the Gibson Company of Woodland.

The Herefords will be shown by J. A. Bunting, W. D. Duke, John Simpson, and others. The University of Nevada will compete with a small herd. Old time breeders will welcome the return of this university.

The Aberdeen-Angus herd of Yakima, Washington, will show this year. It is a particularly good herd and the California breeders are anxious to see it.

TRACTOR TENTS AT STATE FAIR

One of the best features of the state fair will be the exhibit of the California Tractor and Implement Association. It will be in two big tents and will occupy a space of over 44,000 square feet. Last year one tent was enough with a space of 16,000. That was thought large at the time, and it was for last year. But this is 1918, and great things are expected of everybody and everything.

There will be 69 tractors of the wheel and track laying types, including the old familiar models and some real new ones that are just being put on the market. And accompanying this exhibit will be plows of all kinds and sizes, scrapers that follow the big tractors, threshers, binders, silo fillers, etc.

The exhibit will be what is known as a "still exhibit," that is there will be no actual demonstration as to what the tractors can do in the field or about the farm. But in many ways that is a much more satisfactory exhibit than the demonstration for it allows the prospective purchaser to examine the mechanism very closely, and learn some of the special features of the various tractors.

The following is the list of entries for the tractor display:

Bean Spray Pump Company, San Jose, tracklayers; C. L. Best Gas Traction Company, San Leandro, tracklayers; Douglas Boswell, Sacramento, tracklayers; Butler-Vietch Company, Berkeley, wheel tractors; California Moline Plow Company, San Francisco, wheel tractors; J. I. Case Threshing Machine Company, Racine, Wisconsin, wheel tractors; Dauch Manufacturing Company, Sandusky, Ohio, wheel tractors; John Deere Plow Company, San Francisco, wheel tractors; De Laval Dairy Supply Company, San Francisco, wheel tractors; Hamilton & Nickell, Sacramento, tracklayers; International Harvester Company, San Francisco, wheel tractors; F. H. Poss Company, San Francisco, wheel tractors; Sacramento Valley Tractor Company, Sacramento, tracklayers; Sampson Sieve-Grip Company, Stockton, wheel tractors; F. H. Stow Company, Berkeley, tracklayers; Yuba Manufacturing Company, Marysville, tracklayers; California Tractor Company, Stockton, tracklayers; Power Farming Company, Sacramento, wheel tractors; H. V. Carter Company, San Francisco, wheel tractors; Averill Machine Company, San Jose, wheel tractors; Holt Manufacturing Company, Stockton, tracklayers.

A Little "Tank"—for Farm Work

The Cleveland Tractor is built on the same principle as the wonderful European battle "tanks."

It travels on its own tracks, laying them down and picking them up as it goes along.

This efficient type of construction makes the Cleveland *specially* valuable to farmers, as it enables them to work practically *anywhere*—over almost *any kind* of farm land.

They are being operated over gullies, ruts and ditches, through soft soil, wet clay, sand and gumbo—without sinking or floundering. *They do not pack the soil.*

They are working under and among small trees, close up to fence corners, on hillsides and over rough ground with much better results than can be obtained with horses or with any other type of tractor.

And they are working much *faster*.

Thousands of Cleveland Tractors are helping to increase the production of food demanded by war conditions.

The Cleveland, pulling two 14 inch bottoms—which it will do under average conditions—plows 3½ miles an hour—eight to ten acres a day. This is equal to the work of *three* men and *three* good three-horse teams.

The Cleveland steers by the power of its own engine; it requires but slight effort on the part of the driver. Only one man is required to operate it. 12 horsepower is developed at the drawbar and 20 horsepower at the pulley. It is a constant source of tractive and stationary power for twelve months in the year.

It plows, harrows, plants, reaps, cuts ensilage, runs saws and pumps, drags logs, pulls road machinery, hauls manure spreaders and does practically all the work formerly done with horses or stationary engines.

The Cleveland Tractor produces food but consumes none of it. It conserves man power, horse power, time, energy, and effort—and produces greater returns.

The Cleveland Tractor was designed by Rollin H. White, the well-known engineer. It is manufactured under his supervision. Gears and tracks are protected from dust and dirt. Materials throughout are of the best. The whole machine weighs only about 3200 pounds. It can be housed in less space than is needed for a horse.

Take advantage of present produce prices. Raise *more* food *now*. Help the nation and incidentally make more money yourself by using one or more Cleveland Tractors.

Write for complete information and the name of the nearest Cleveland dealer.

Efficiency---War Efficiency---at the State Fair

ALL the world loves a lover and today California proved herself no exception. It is opening day at the fair—The State Fair. Sailors, soldiers and air service give the grounds a most military aspect.

In the middle of the afternoon 300 sailors from Mare Island were drilling. Their band of 75 pieces was playing, a squadron of airplanes maneuvered above and people cheered. The squadron broke up and its planes returned to their home at Mather Field a dozen miles away—all save one. He stayed and gave us a few thrills. The antecedent of "He" in that last sentence may be "airplane", but I venture the grandstand crowd was centering its eyes on the speck of animation a few feet back of the whizzing propeller and wondering if "he" would soon be overseas and dropping something on the head of Mr. Hohenzollern with sufficient force to convince him that one of these days American planes with Liberty motors will sail over Mittel Europa and drop dynamite or TNT on his throne and blow it to the other side of the Hellespont.

In any case Mr. Airplane man gave several nose dives, spirals, upside downs and other proofs of ability to dodge Hun "aces", then landed and was introduced to the crowd as Lieutenant George B. Gray of the aviation service. He received a hearty welcome—a cheer. The cheer increased to a roar and people stood and waved everything available a moment later when a girl slipped through the crowd and was given a resounding kiss. She may have been sister, sweetheart or wife, we knew not, but the human touch had been given and we cheered again.

The ponies jockeyed for position, the band played, but all eyes followed the couple up to the grandstand where mother was greeted and the crowd watched—not the races, but mother, lover and the other till it was time to go—when the plane sailed away after a few more thrillers and with a parting wave of the hand to—all of us.

Everything is war. The government exhibit is wonderful. The forestry service says "Stop the waste, put out the fires—for war." The food administration: "Produce more—save more—for war." The treasury: "Save, and give of your savings—for war." The war department: "Give your best—your very best blood—for war." The Red Cross: "Help us to save—from war."

The $300,000 Agricultural Building which was to have been dedicated is not yet a third done because its steel and the labor were needed for the machinery of war. One wing has been partially completed so that its ground floor and balcony hold a great number of county and other attractive exhibits, but its tile roof is not even yet in place, neither is any finish work done. The great rotunda has only a few of its monster steel uprights and girders in place while the north wing, or a half of the building, is only outlined by a wall a few feet above the foundation.

The live stock men gather in knots and discuss breeds, methods and live stock activities which may through greater efficiency add to the length of Uncle Sam's arm.

The schools are making a great educational exhibit. The big Machinery Hall has been transformed, at least as to the noise and oily smells which have always greeted us there, and manual arts with products of war gardens fill the building, cover the wall and occupy the large outside court where formerly spray pumps, plows, disks and farm implements generally were displayed, but now in tents a half mile away.

Next door is the poultry building with fowls of every type, including pigeons strutting their proudest to attract the eye of the judge, and of course every bird showing wherein its welfare is bound up in war success.

One restful feature this year is the appearance of more green on the ground. The infield, which heretofore has had as its only ornaments a barren field with at best a covering of dried foxtail, and other weeds, a half mile of track with two locomotives waiting the slaughter with a "head on" collision, is this year covered with waving alfalfa. Also a couple of hog houses have been moved from near the poultry building and the tract is now covered with alfalfa with the tents of the boys from the state school at Ione occupying one side and the field used as drill ground. It's a wonderful educational opportunity for those boys. When "off duty" live stock barns and machinery, tractor and implement tents are filled with the inquisitive youngsters asking few questions but using two eyes.

Speaking of implements and power farming appliances! There are three monster tents. I don't know how many square feet they cover, but it's a wonderfully complete exhibit. It's worth a week from every farmer who wants to know how to farm with employment of least labor. I haven't given it a week yet, in fact I walked in one tent and in about five minutes walked out of the far side of the third tent, but I "sensed" some fine lessons from those tractors and implements, and tomorrow the Cultivator camera will get busy and next week will tell more of real lessons than my pencil can.

Pleasure autos are hardly among those present. Their usual place at the left as one enters is now occupied mostly by motor trucks and accessories as is a still larger tent at the right. Efficiency, efficiency everywhere with minimizing of those things which make for pleasure.

Even Sacramento's principal streets, which usually almost hide the sky with streamers and bunting, show not one streamer. At night its lights which have heretofore chased each other all over the fronts of the buildings are now darkened.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

It's different this week. The illustration appears inside on Page 3. The editor and the boys are at the state fair and have just sent down a bit of a story as to how things look up there.

TRACTOR MEET CHANGES

Tractor men believe in tractors. But they didn't know how thoroughly everybody believes in tractors until entries and requests for larger space at the Los Angeles demonstration began to overflow the 350 acres provided on the Whittier Boulevard. This field staged a great demonstration last year; but it can't hold the actors in the 1918 event. So it has been necessary to change the location of the demonstration to a much larger tract on Wilshire Boulevard at La Brea. The dates remain as before, September 17-21.

IRRIGATE AFTER FRUITING

Many deciduous fruit growers are seeking the reason for no fruit setting. Whether it is due to insects, to improper pruning, to lack of water for the roots, or to other reason, is freely discussed. We want to call attention to the last factor mentioned. Many a fruit grower has the idea that once the fruit is off the tree, the tree is practically dormant and ready to enter into its period of rest. Such a grower should make a careful study of his tree. From this time until the dormant period properly begins, the tree is perfecting its various parts that they may function properly. One of the essentials of a heavy crop next year is that the buds shall be grown this fall. They cannot be grown with roots in bone dry soil.

ORGANIZE

Apricot growers had a very enlightening lesson this year. It's the same old lesson that began about the time the first apricot grew and, as usual, the grower is trying to figure out how much his loss is. One grower near Corona had some 20 acres of apricots—they were only medium sized, but he had reason to believe that he ought to receive for them not far from $100 per acre. He didn't. He did sell for about $200 for the entire 20. If he had been a member of a cooperative organization his loss would not have been so great. Even the association has not done as well this year as it has in some years, but it has been in position to take advantage of conditions so far as possible and is not confronting its members with disaster. It is too late to do any organizing or any work for this year's crop. It is, likewise, none too early to begin planning for next year's output. The grower who is waiting for the government to rush in and grab his fruit and pay long prices should cease to wait and begin to organize.

EIGHTEEN TO FORTY-FIVE

Thursday, September 12, is the day—second only in significance to that day in April, 1917, when the United States of America took up the burden of war against the Huns. On next Thursday the man power of the nation—from 18 to 45—will be solemnly laid upon the altar of service. The day of holding back, of waiting for "George to do it," is past. It is our war.

In his proclamation fixing the day for registration President Wilson says:

"Fifteen months ago the men of the country from 21 to 30 years of age were registered. Three months ago and again this month, those who had just reached the age of 21 were added. It now remains to include all men between the ages of 18 and 45. * * * We solemnly purpose a decisive victory of arms and deliberately to devote the larger part of the military man power of the nation to the accomplishment of that purpose. * * *

"Only a portion of those who register will be called upon to bear arms. Those who are not physically fit will be excused; those exempted by alien allegiance; those who should not be relieved of their present responsibilities; above all, those who cannot be spared from the civil and industrial tasks at home, upon which the success of our armies depends as much as upon the fighting at the front. But all must be registered in order that the selection for military service may be made intelligently and with full information."

MORE MILK

Every Californian should hear the lecture now being given on the Pacific Coast by Prof. McCullom of Johns Hopkins University, and making the present lecture tour by direction of the U. S. Food Administration.

Prof. McCullom gives a most convincing statement of the great need, or rather absolute necessity, for greater consumption of the products of the dairy. No people can be strong—no person can even live long—who does not make milk or its products or eggs a factor in the diet. A possible partial exception is in leafy vegetables such as spinach, lettuce, etc.

Since 1907 Prof. McCullom and other specialists have investigated and find that fats and proteids and other ingredients from olive oil, rich red meat and other substances and combined into a perfect substitute (so far as chemistry can accomplish it) of butter, of milk or of eggs, fail to long sustain life of animals used in the test, and persons fed exclusively on such diet with cereals have prematurely aged before the experiment is carried far.

There is something—a mysterious something—which eludes the chemist and yet is absolutely essential to human—to all animal life.

Milk contains that something.

Those sections of all large cities where milk is purchased in smallest quantities and meat, corn meal and other foods consumed in larger quantities, proportionately, show greatest percentages of consumptives, while in the south where corn and bacon predominate and milk is little used, there appear pellagra and berri-berri.

Milk production is decreasing in the United States. "The dairy industry has made us what we are."

The industry must be made profitable.

Organize.

ROLLING TRACTOR SCHOOL

Marshall DeMotte, chairman of the state board of control, also of the council of defense, has launched an idea which is bound to become something more concrete. He explained the movement—for it has begun to move—while we listened to the band contest at the State Fair this week. The music may have lent force to his idea, but we think it will stand alone—or rather it will roll along under its own power. It has no self starter, but a few who have taken a turn at the crank have given the impetus.

It's a California-tractor-and-truck-school-on-wheels idea — a rolling school. It is to be under the supervision of the vocational educational division of the state board of education and with the cooperation of various manufacturers of tractors and trucks.

It will be strictly a high school feature, but with the understanding that in every neighborhood or district the school is held it shall be open to farmers or tractor operators of any age. The regular curriculum of the school must be changed for the week or two weeks of the special school. When the course is finished the entire "school" of trucks and tractors moves to the nearest high school which wishes it.

Regarding the plan Mr. DeMotte said:

"It is probable that we will have four or five units for the state. Each one of these will have several tractors and necessary machinery to be carried from place to place in motor trucks and trailers. Each unit will have two divisions, one to consist of an instructor with a truck and equipment, which will enable him to lecture and demonstrate on the care and operation of a gas engine. He will give instruction as to theory and practice with gas engines, and will make the students acquainted particularly with the ignition systems, which seem so difficult for many to understand. Instruction of this nature will consume two weeks of the twenty-four days' course.

"The engine man will be followed by field division, which will give instruction as to the operation of tractors in the field. This portion of the course, also, will consume two weeks.

"It has been decided by the state board of control and State Controller John S. Chambers that half of the expense of the work may be taken from the emergency funds of the state the other half to be borne by the local school authorities where the schools are held. Local authorities also will be expected to provide class rooms, fields for tractor work and shelter for the machines."

This Week's War Notes

All is quiet along the Mexican border.

The government wheat price for 1919 has been fixed as the same as the 1918 price, $2.20 per bushel minimum in primary markets.

The state food administration is going after grocers who have been selling sugar at ten cents a pound instead of the legal nine cents—and some others.

Some 300 colleges throughout the country have been selected by the war department for instruction of the Students Army Training Corps. Instruction begins October 1.

News comes from The Hague that von Hertling has been retired as chancellor of Germany and Dr. Solf has been appointed his successor. This is supposed to presage peace overtures.

September 12 has been named as registration day for all men between 18 and 45 not already registered in the army draft. It is estimated that this will bring in about 13,000,000. California's quota is 398,552; Arizona's 49,794; Nevada's, 16,116.

By the provisions of the new war revenue bill now before the House exemptions of $1,000 income for unmarried and $2,000 for married persons will be the same as before, but the tax on amount of income above those sums will be trebled.

Allied forces have driven back the Bolshevik Red Guard along the Ussuri River north of Vladivostock. Czecho-Slovak troops are fighting with the Allies. Our government has officially recognized the Czecho-Slovak as an independent nation and one of the Allies.

Kern County is thoroughly aroused over burning of haystacks. Nine were burned Saturday morning, the fires occurring almost simultaneously. Investigations disclosed use of phosphorus. The county council of defense has called citizens together to put a stop to the activities of the fire-bugs.

Ninety-five Americans, including consular officers, all the personnel of the Y. M. C. A., Y. W. C. A. and others have left Moscow for Petrograd and passage through Finland and Sweden. At latest reports Consul General Poole had determined to remain in Moscow. American Ambassador Francis is now in Archangel. Outbreaks are reported at Kiev against the Germans and deepening unrest throughout the Ukraine.

The British and Canadians have captured Lens after having taken the Drocourt-Queant line, known as the Wotan line, an important switch back of the Hindenburg line. They have made an advance of four miles on a twenty-mile front. The Allied captures of prisoners between July 15 and September 1 are officially reported to number 128,302. Guns to the number of 2069 have been taken with more than 15,000 machine guns and mine throwers.

Fierce fighting from Ypres to Rheims. Our American forces are heard from south of Ypres, where, with the British, they have taken the Belgian town of Vermozelle and are pushing on eastward. Near Soissons they are fighting with the French, and Gen. Pershing announces the capture of Terny-Sorny, north of the Aisne. In Monday's operations they captured 572 prisoners, two 104's and 78 machine guns. The work of our artillery has been notable. So close did the gun crews get to the Germans that they made many captures of prisoners.

Pleasure, Profit, Patriotism at the State Fair

By the Cultivator Bunch

PRESIDENT ROEDING is one busy man—or rather several busy men. Secretary Paine likewise looks several ways as questions are presented, and the entire board of directors are in almost constant session these first days of the State Fair. There are some dis-

Board of Directors of California State Fair

Left to right: E. Franklin, T. H. Dudley, I. L. Borden, T. H. Ramsay, Geo. C. Roeding, J. M. Perry, H. A. Jastro, E. F. Mitchell and C. J. Chenu. Absent: Col. Theo. Grier, E. J. Delorey and R. W. Bull.

appointments. The agricultural building is not finished, for instance, but generally exhibits are in place and they are above the average. The weather is favorable. One of the local papers chronicles "auspicious opening under 'autumnal skies'."

"The war" dominates. Government exhibits, Red Cross, Y. M. C. A. and allied interests are represented. The food administration has one of the largest. Posters, "Produce Food," "Save Food," "Join the Red Cross," "Gee, I Wish I Could Enlist," "The Government Wants YOU," and a thousand others are used for fillers everywhere. The army and navy have exhibits of machine guns, torpedoes and wireless, and show you a depth bomb and explain how it may be "set" to explode its 300 pounds of T. N. T. at any depth from 40 to 150 feet.

And the crowd breaks away from a horse race to see the sailor boys or their band. Classy? Sure!

Many state commissions and organizations are using the occasion to make known their activities. The state university occupies three buildings, the creamery, refrigerator or dairy foods building, the dairy farm, then the two buildings are connected by a roof which makes another building larger than either. The university is not an entrant for premiums, but is simply an exhibitor.

The state horticultural commission has a complete exhibit with three specials, each an outstanding one. The first is rodent control, next fruit standardization, and then in the balcony above the state insectary exhibit. In the latter are, of course, a collection of the native lady birds which are being boarded for nothing providing they will later fly away from home and into melon and other fields and eat aphis.

Then there is another, a new bug big enough and handsome enough for a millinery ornament. More than an inch long, irridescent green or red according to the angle, but always beautiful. I saw five of them devouring a big caterpillar. They were going at him like so many terriers after a rat. I haven't introduced him? His name is Calosoma sycophanta, a native of France and brought by the federal government to eat up the gypsy moth pest of New England.

The standardization exhibit is most shocking. It is in part made up of fruit from packages which have been condemned: wormy, gnarled, rotten apples; plums of all stages of greenness and variation in crate of 68 per cent in size—all captured from some shipment of "California" fruit. The shipper is spared the disgrace of his name appearing on the package. Too bad, for the state should point its finger and "for shame" him into decency.

Yolo County, San Joaquin County, Fresno County, Sacramento County, all make fine feature exhibits. The Japanese Producers Association has an exceptionally fine booth and display of their products.

But we can't get the whole fair in the Cultivator. There's the machinery, implements, and tractors—wait till next week—and many features of interest. But about the live stock:

The State Fair Has Good Music

There are several bands. This one is from Mare Island Navy Yard.

BEEF CLASSES AT THE STATE FAIR

Written for California Cultivator
By Ralph P. Royce

THIS year's show of beef cattle at Sacramento is, in many respects, the strongest show ever held at the state fair. Certainly, the leading breeds are better represented than in the past and the show throughout is better balanced. For a good many years the state fair was regarded as a Shorthorn show. Herefords were rarely seen and Angus were never expected. It is different now. The red, white and roans still hold their lead, but if "coming events cast their shadows before" it will not be a great while before the other breeds will be actively contending for the favor of the cattlemen of this state.

The Hereford show is quite the strongest this breed has staged for a number of years. Very creditable herds will make an interesting show. For the most part the aged classes will be light, but condition is noted all down the line. Shortage of help and high priced feed make it rather difficult to bring out aged stuff fitted to the point necessary to win. Considerable comment has been expressed by those who have followed the cattle show at Sacramento to the effect that the exhibitors are bringing out better fitted herds each year.

One of the most encouraging features of the show is the number of new exhibitors. Each year new herds are in competition. This fact is significant—it indicates that the pure-bred cattle industry is a growing one in this state. Grow it must. With a market that will require years to fill and an awakening appreciation of the value and possibility of pure bred bulls on the ranges of the state, the breeders can view the future with a great deal of optimism. There is no question as to whether good cattle can be produced here. The only question is, will the California breeders seize the opportunity? The answer to the question is the increasing scope and importance of the state fair. From a purely local show it has developed until this year herds from three states are competing for the honors of the breeds. For the first time herds of Shorthorns, Angus and Herefords fill the big barns.

The Shorthorns have been represented by more herds and perhaps by animals of more outstanding quality, but the classes are well filled and a good show is assured.

Following up the show of last year, the Herefords are back with more herds and better filled classes. Two herds from Nevada with three from California are entered. The Hereford breeders on the Coast are a progressive lot who are apparently determined to make their breed a factor in the cattle industry of the state.

For the first time in years visitors at the state fair had an opportunity to see a full herd of high class Angus. This herd is comparatively new in this state, but there is room for it and considerable interest is being manifested in the "doddles."

The following breeders are represented :

Shorthorns

W. M. Carruthers, Live Oak; T. S. Glide, Davis; Hopland Stock Farm, Hopland; Pacheco Cattle Co., Hollister; Roselawn Stock Farm, Woodland.

Herefords

John A. Bunting, Mission San Jose; J. H. Cazier & Sons Co., Wells, Nevada; W. D. Duke, Likely; W. M. Simpson, Hood; University of Nevada, Reno, Nevada.

Aberdeen-Angus

Congdon & Battles, North Yakima, Washington.

STATE FAIR NOTES

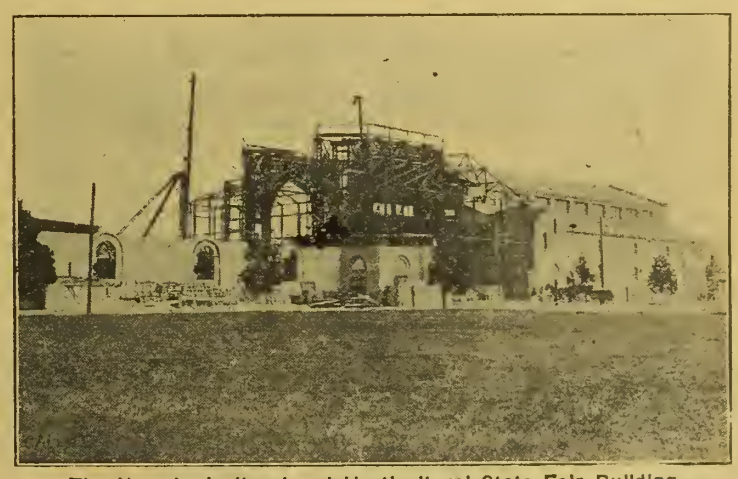
Written for California Cultivator
By W. S. Guilford

BREEDERS and exhibitors of registered hogs in California today are in the fortunate and enviable position of being of very great service to the nation. Pork is one of the commodities most useful to the army—and those who are able to increase the supply are helping win the war in a material way.

There was never before a demonstration of the value of good breeding and feeding that was more striking—or that was brought home to everyone in a more striking manner than the hogs of all breeds at the state fair this year. This is particularly true in the pig classes. There are many pigs under six months old that weigh better than 250 pounds.

And every good boar that any breeder sells to go into service in grade or pure bred herds is a "war worker." His pigs will grow faster and make more pork—good pork—than the offspring of any scrub sire.

We need many more breeders of registered hogs, and many more will get the incentive for establishing herds at this fair.



The New Agricultural and Horticultural State Fair Building

To cost when completed $300,000 and to be a most complete and permanent asset of the State Board of Agriculture.

Berkshires at the Fair

Every year it has been possible to say that the Berkshire show is better than at any preceding Pacific Coast event. This is true this year in stronger terms than ever before.

Continued on Page 234

Agricultural News Notes of the Pacific Coast

Northern California

Esparto is busy with the almond harvest.

Gridley, Butte County, is to have a new dried milk plant.

Sacramento will have three rice mills in operation this season.

Butte County rice growers are paying 26 to 28 cents for rice bags.

Glenn County's wheat acreage the present year is 6000 acres above normal.

The annual poultry show of the Hayward Pigeon Club will be held November 22-24.

Alfalfa growers of Yolo County have organized and will affiliate with the State Alfalfa Growers' Association.

The Alameda County farm bureau will hold its annual farm picinc today, September 7, at Fernbrook Park.

Sonoma County's fair will be held at Santa Rosa October 10-12. One feature will be a tractor demonstration.

The Yolo County farm bureau will carry on campaigus this winter for more hogs and more sheep on every farm.

The Sonoma farm bureau announces a tractor demonstration at the county fair to be held October 10-12.

Practically all the grain of Yolo County is now in warehouses. The crop is 25 per cent less than that of last year.

Farm Adviser Baade of Napa County advises farmers to keep down next year's weed crop by burning all dry weeds now.

An investigation of the water problem in El Dorado County is being made by the food administration which now has an irrigation expert in the field.

To permit students to finish up the summer work on the ranches the University of California farm school at Davis will open two weeks later than usual, beginning September 27.

Mrs. Adelia Cummings of Biggs is the only woman farmer to be granted an allottment in the Durham Colony now being settled under direction of the California Land Settlement Board.

Cool weather in the pear orchards of Eldorado County is more than welcome, as pears were ripening up too fast owing to necessity for turning off irrigation water from some of the orchards.

Farm Adviser Baade of Napa County says that he is informed by the federal bureau of plant industry that it is possible to graft over old grapevines to the Corinth grape, commonly called the Zante currant.

Central California

Farmers short course at Davis opens September 20.

San Mateo County has two new women mail carriers.

Grain growers of Madera County have formed an organization.

Merced aud Madera Counties are having squirrel clean-up campaigns.

Kings County creameries paid $200,000 for cream checks for the month.

Stanislaus County farm bureau has shipped 30,000 pounds of wool to Boston.

The government wants 30,000 tons of straw from California for bedding for soldiers.

Farm Adviser Smyth of Madera County is urging the value of winter forage crops.

The Kern County farm bureau held an auction sale of fat hogs at Wasco on August 20.

Fruit growers of Madera County will make their yearly excursion to Kearny Park on September 10.

Kings County farm bureau held an auction sale of hogs on August 23. Prices secured were $16.10 and $16.60.

Grape growers of Madera County have formed a permanent organization and will oppose the dry measure.

All road building except that necessary for war purposes will be discontinued after September 10 by federal order.

The state organization meeting of the California Alfalfa Growers' Association was held in Fresno, August 30 and 31.

The annual convention of the California Creamerymen's Association will be held at Visalia October 17-19. Three hundred creamerymen are expected to be present.

The San Joaquin Valley Counties Association will ask no contributions from the various counties this year. Headquarters of the association will be maintained at Fresno.

Local meetings of the Kern County farm bureau for September: 2, Weed Patch; 4, Kern Delta; 6, McFarlaud; 9, Delano; 11, Wasco; 12, Rio Bravo; 13, Edison-Fairfax; 16, Tehachapi; 18, Pond; 20, Rosedale; 25, Shafter; 27, Arvin.

Committees of wine and hop growers in conference with Senator Phelan were informed that he was unable to hold out much hope to the hop growers, but that he believed the prohibition clause could be so amended that the wine men would be given the necessary time in which to reap the present crop, manufacture the wine and dispose of it.

Southern California

Huntington Beach, Orange County, will hold a fall fair.

California's sugar crop is 25 per cent short of normal.

The Huenéme cannery is working day and night on tomatoes.

Jamul, Sau Diego County, rèports good returns from all crops.

Victor Valley growers of broom corn report satisfactory crops and prices.

San Diego County farm bureau held a picnic at Flinn Springs last Monday.

Sugar beets from the Chino district are now being shipped to the Oxnard factory.

The Orange County farm bureau will hold a picnic at Orange County park August 30.

The walnut crop of Ventura County is estimated at 90 per cent of normal; lemons a full crop.

The Santa Ana Valley Walnut Association has changed its name by dropping out the "Valley".

Anaheim and Garden Grove chilli pepper growers have 5000 acres planted this year and are expecting big prices.

The Farmers' Labor Employment Association of Imperial County has formed a plan of campaign to secure support of all ranchers in the county.

Palo Verde Valley, Riverside County, has started a campaign to secure 1000 cotton pickers for the season. 12,000 acres are planted in that section.

The Fullerton district of Orange County has a big crop of beans this year. The Bastanchury ranch has 2000 acres planted, Blackeyes and Limas.

Three dollars per day for harvest hands has been decided upon by the Ventura County farm bureau. If the farmer boards the laborer the wage is one dollar less.

The acreage yield of sugar beets in Orange County this season is about normal, but the acreage is short owing to difficulties last fall between factories and farmers.

The vexed sewage disposal problem of Alhambra, Pasadena and South Pasadena is entering on another phase. Arrangements have been made for the establishment at Alhambra of an experimental plant for the trying out of a new disposal process.

At farm bureau picnic at Orange County Park last week the new adviser, H. E. Wahlberg, made acquaintance with Orange County people. He succeeds A. R. Sprague who has become orchard manager on the Atascadero project in San Luis Obispo County.

The Coast and General

Cotton picking has begun in the Salt River Valley of Arizona.

The Wenatchee Valley of Washington expects a fair crop of fine apples.

The cranberry bogs of Washington and Oregon give promise of abundant yields this year.

Latah County, Idaho, estimates that much of its bean lands will yield 1000 pounds to the acre.

The Juliaetta section of Idaho has the biggest bean crop on record. The acreage is between 3000 and 4000.

Sheep herders in Oregon are now being paid up to $100 wages. One case is reported where $125 is being paid.

Southeastern Arizona stock ranges are getting very dry. In other sections the rain has put them in very good condition.

Colorado's cantaloupe season is from 10 to 15 days earlier than usual. Growers report the labor situation in fairly good shape.

Idaho farmers are urged not to ship their hay and feed outside the state but to buy cattle and sheep and bring them into Idaho for feeding.

Northern Idaho has had some early rains which have somewhat delayed harvesting operations. The third cutting of alfalfa has already begun.

There are 25,000 workmen in the shipyards of Oregon and southwestern Washington, and nearly that same number of soldiers and civilians getting out airplane spruce.

The courts have upheld the constitutionality of the Idaho law giving priority right of local range to resident live stock owners over the owners of big transient herds.

Army worms have been doing serious damage to crops in Florida, seeming to be especially fond of the castor beans being raised for government airplanes. Their work is now being checked.

Production of oil in the Baku region of the Caspian Sea, just entered by our British allies, amounted in 1917 to over 48,000,000 barrels. This was less than the normal output, the reduction of course being caused by disturbed conditions.

Manufacture of woolen hand knitting yarns has been stopped because of needs of the army. By a later order all the woolen mills on the Pacific Coast have been taken over by the government and civilians are requested to refrain from purchase of woolen goods as much as possible. It is hoped in this way to secure enough wool so that hand knitting yarns may be again supplied to American women for the making of clothing needed by our soldiers.

The Famous Hardie Junior Sprayer

We believe this is the greatest small power sprayer ever manufactured. And placed on the market with phenomenal success in every fruit section in the United States, and vouched for by thousands who own the FAMOUS HARDIE JUNIOR. Equipped with 1½ h. p. engine, battery ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and with two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

ALL FOR $275.00, DELIVERED ANYWHERE IN THIS STATE.

If truck is not needed, deduct $45.00.

These prices are subject to change without notice. The wise buyer will place his order now for future delivery.

This low price is made possible by big production.

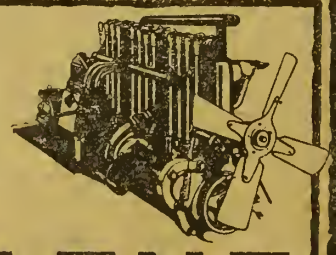
If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

Hardie Spray Hose Is the Safest Hose to Buy.

The Hardie Manufacturing Co.

200 N. Los Angeles St., Los Angeles, Cal.

The Valve-in-head-type engine illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*



ZEROLENE

The Standard Oil for Motor Cars

It Keeps the Engine Young!

Zerolene keeps the engine young—full-powered, smooth-running, and economical in fuel and oil consumption—because it is correctly refined from selected California asphalt-base crude. Gives better lubrication with less carbon. Made in several consistencies. Get our Correct Lubrication Chart covering your car.

At dealers everywhere and Standard Oil Service Stations.

Advantages of Summer Fallowing

By Prof. John W. Gilmore

THE entrance of the tractor into farming operations and the advantage in fallowing or summer handling of soils being so generally acknowledged, we have asked Prof. John W. Gilmore of the University of California to give a few hints on summer management of soils. Prof. Gilmore writes:

* * *

I have your letter of August 8 regarding the handling of land under our dry farming conditions in preparation for the following crop. I only wish that I had the ability to write an article on this subject that would be commensurate with its importance in our agriculture. I consider the proper making of a summer fallow one of the greatest problems in our agriculture at the present time. When it is remembered that the largest acreage of agricultural land must be handled under a system especially adapted to our rainfall conditions, one can see the importance of the problem. Some day I hope to be able to get the practices involved in this procedure fully set forth.

The usual teaching regarding a summer fallow has been that it conserves moisture. I think, however, that the real benefits go far deeper than this. By properly preparing land under dry farming conditions we get an even distribution of moisture throughout the entire depth of soil as compared with a very dry surface over either rough fallow or bare stubble. This even distribution of moisture ameliorates temperature conditions and consequently the elaboration of plant food, especially available nitrogen. Nitrification takes place more favorably than under any other conditions, and as a matter of fact no summer fallow conserves moisture to any greater extent than would be supplied by the winter rains in case of no fallow at all. But to my mind the greatest benefit that comes of the summer fallow is that the land is ready to plant when it ought to be planted.

As I go through the state I find the greatest variation of crops on the same soil type due to the method of preparing the land and the time of planting. Under our present methods of cereal production, proper land preparation and timely planting will create greater differences in yield than any other factor, oftentimes these amounting to more than 100 percent in my judgment.

Both barley and wheat should be harvested the earliest possible day following its ripening. The combined harvester, while economical in some respects militates against the best interest of the land, in that often times

Deep Plowing

men are delayed for weeks in getting their crops harvested. If farmers owned their binders or two or three adjacent farmers owned their machines in community and could harvest their crop as soon as it is ready, not only would the straw be better for winter feed, but they could proceed to handle their land in a judicious manner and the weed problem would be largely solved.

As soon as grain is taken from the land on most soils the stubble should be disked or double disked. This is not a costly process and would result in much better plowing later on as well as mulching the surface of the soil and cutting the stubble to pieces. Of course there are many farmers who desire to pasture this stubble, but in my judgment the benefits of this practice are worth more in the long run than the pasturing. Except in those types of soil which are heavy and are likely to puddle the land should be plowed in the fall. On heavy soils that are subject to puddling the plowing may well be deferred until spring provided the land is to be fallowed during the summer, but in any case it should be plowed deep. One great trouble with the turning under of stubble interfering with the crop yields and the necessity of burning the stubble is due to shallow plowing or no plowing at all, but merely disking, which is practiced in many localities. If this stubble were turned under deeply, these difficulties would disappear.

There are large areas of our foothill countries which have been cropped continuously to grain for a number of years and now produce only unprofitable yields. Perhaps much of this area should never have been plowed at all, but kept in its native grasses instead. It is difficult now to bring these lands back to normal producing powers without considerable expense and time, but if they are brought back to adequate production, a cropping system must be practiced that will involve judicious plowing and a rotation of crops that will restore to them their necessary organic matter content. A practice that has proven advantageous in many instances and on a wide variety of soils, even where the annual rainfall is less than 15 inches, is as follows: Harvest the grain as soon as possible, disk the stubble thoroughly, dry plow the land where power and implements are at hand; if not plow as soon as the fall rains come on. With suitable implements reduce the surface of the land to a fine condition; only where the land is heavy and likely to puddle it may be left rough. Begin working the land with a disk in the spring as early as possible in order to prepare a good surface for the planting of beans. The bean crop can be removed in sufficient time for preparing the land for a fall crop of grain. This two year rotation may be followed with a cover crop to be plowed under in March every third or fourth winter. This cover crop may be field peas, vetch yellow clover or in some instances bur clover. Fenugreek has been employed but seed of that legume is difficult to secure at the present time. During this very unfavorable season a farmer in a section of less than 18 inches of rainfall has secured 2440 pounds of clean wheat per acre from one piece and 2940 pounds from another. This farmer had carried beans upon the land for two successive years with grain for one year. On this particular land it may not be necessary with this rotation to summer fallow, but there are probably tracts of light land that will require a summer fallow every third or fourth summer to maintain their crop producing power. In brief, every farm is an individual in itself and requires a treatment consistent with the type of land, organic matter content and other fundamental factors, but if we maintain our crop producing power we must pay more attention to the rotation of crops and to the maintenance of the organic matter content of our soils. These, in my judgment are problems that invite the most careful study by every farmer.

Uncle Sam's Fight Against Six-Legged Huns

Written for California Cultivator by Roy E. Campbell

ALTHOUGH entomological investigations are conducted by each of the state experiment stations, the United States department of agriculture has by far the largest and most extensive organization for carrying on investigations looking to the control of our injurious insect pests.

The bureau of entomology, under whose direction this work is being done, has its headquarters in Washington, D. C. It is separated into several divisions according to the various branches of agriculture and horticulture, such as deciduous fruits, tropical and subtropical fruits, cereal and forage crops, truck crops, forest and shade trees, bee culture, etc.; each division investigating the insects affecting the crops or plants in its group.

In carrying on an investigation of an injurious insect, a thorough study of its life history is first made. This shows the length of life, number of generations per year, rapidity of reproduction, the time of year when the insects are most numerous and most injurious, in what stage they pass the different seasons of the year, and many other important facts too numerous to mention here. There often is a certain period in the insect's life when it is much more easily controlled than at other times, and an effort is made to ascertain when this period is. The insect is also studied with reference to its food plants, distribution, origin, natural enemies, and finally control measures.

Headquarters U. S. D. A. Truck Crop Investigation at Alhambra
Messrs. Campbell and Ryan on steps.

An investigation of the food plants of an insect may show what is known as alternate hosts, which are plants often of no importance economically on which the insect passes part of the year, usually when the cultivated plant is dormant or out of season. By finding these alternate hosts, and using control measures, or destroying them if they happen to be weeds, the possibility of the cultivated plant being infested later on is lessened. Conversely, the number of alternate hosts may be found to be so great and varied that any sort of artificial control measures are useless until the cultivated plant is attacked.

Another important fact often demonstrated in an entomological investigation is that a modification of agricultural practice will aid greatly in reducing the number of insects. For example, it was discovered that plowing fields in which grasshoppers had laid their eggs, before the latter hatched in the spring, would prevent a ser-

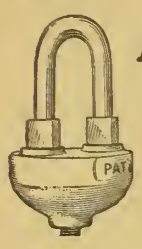
War Time Thrift
All Time Comfort



In patriotic support of our government in these war times—absolute thrift—the wisdom of purchase and elimination of waste—is not only a necessity, but a positive duty.

Do you realize that smoke, soot and fumes is waste?—Loss of fuel?—That from forty to sixty per cent of the heat from wood and coal goes up the chimney?

You can stop all of the loss quickly—make clean gas from coal oil in your own stove. Better still—buy your fuel cheaper than ever.

"The simplest thing in the world" does the work—clean, safe, cheap. Of all the times, this is the time to investigate the "Premier."

THE DRYING OF FIGS

By I. J. Condit

EVERYBODY who has a fig tree is this year drying the fruit. Sugar is scarce, and anyway dried figs are easily made and good eating. So many requests have come to the Cultivator for republication of these directions by Mr. Condit that we reprint below. Be sure and keep it track of it. If you don't need it now you will later—or your neighbor will.

* * *

Dried figs in California are made mainly from three varieties, the Adriatic, the Smyrna, and the Mission, named in the order of their present importance.

The first crop of the Mission fig is generally sold fresh, but may be dried, and at present prices the dried product may be the more profitable of the two. The second crop is mainly dried but on account of the black color of the fruit does not command as high a price as that of lighter figs. The Mission figs drop to the ground when mature, are picked up shortly after and dried on trays in the sun. No further treatment is generally necessary.

The second crop of the Adriatic and Smyrna is the only one of sufficient size and importance to be of value for drying. The limp and partly dried figs drop naturally or are lightly shaken from the tree and are picked up within three or four days since an inferior product results from too long exposure to the effects of sun, dust, and insects. The figs are hauled to the drying yard and spread on trays, after which the Adriatics are sulphured to bleach the skin and improve the appearance. Sulphuring in lug boxes is often practiced but does not give as uniform or as good results as on trays. Smyrnas which are properly handled should not require sulphuring. Adriatics are dried in direct sunlight from one to three days depending upon the heat and humidity, while Smyrnas are best dried by stacking the trays one above the other so as to allow free circulation of the air between. Over-dried figs become tough, woody, and inferior. After sorting out the bird pecked and split fruit the figs are dumped from the trays into perforated boxes or containers, washed for 20 minutes in cold water containing four ounces of salt to the gallon of water, and again spread out for a final drying of half a day in the sun. They are then placed in piles on a clean floor or in sweat boxes, where they are allowed to go through a sweat for about two weeks, being turned with a shovel two or three times during that interval. Sweating equalizes the moisture and gives the product a better texture. The figs can then be stored for packing or sent to the packing house, care being taken in either case to prevent infestation by insects.

CHANGE IN LOCATION OF THIRD ANNUAL TRACTOR DEMONSTRATION

The Whittier Boulevard site would have been ample for a demonstration of a size similar to last year's meet, but the officials in selecting that location never dreamed of having to accommodate so many exhibitors as have already signed up. Entries have been so heavy during the past week that every estimate on construction and other necessary work has had to be practically doubled. Therefore the big tract of land selected for the site on Whittier Boulevard has been abandoned for larger acreage on Wilshire Boulevard at La Brea Avenue, at the western city limits of Los Angeles.

The new location has many advantages over the original one. It is several hundred acres larger and no matter how many exhibitors enter there will be ample room for all. At the old location only 350 acres were available for a demonstration field with 60 acres for exhibitors' tents. At the new location spectators can more easily witness the demonstration of the scores of models and the operators of the many machines will not feel crowded.

So important will this event be at this critical time when the cry for greater food production is heard on every hand that more than 50 of the exhibitors have been making demands for increased space. The general committee had one of two courses to pursue—either limit each exhibitor to a small amount of space and allow only a few machines on the demonstration field or change the location to a place where several hundred additional acres were available.

Although wide publicity has been given to the location on Whittier Boulevard none of the construction work has been started, so that no financial loss will be entailed.

The Wilshire tract is more easily accessible from points in Los Angeles and surrounding country, being connected with the boulevard running direct to the heart of Los Angeles with smooth paving all the way. The Santa Monica red car line via Sherman leaving the Hill Street station of the Pacific Electric runs past the tract and special car service will be had during the five days of the demonstration.

Remember the new location—it's right at the western city limits of Los Angeles, on Wilshire Boulevard, the main artery of travel to the beaches. The demonstration starts Tuesday at 8 a. m., and runs every day September 17, 18, 19, 20 and 21, closing at 5 p. m. on the final date. No admission will be charged and there will be parking space for over 10,000 automobiles free. A restaurant on the grounds will serve dinner at attractive prices.

Back of The Big Crop

Avery Tractors Helped to Raise It
Avery Threshers Helped to Save It

THE crop this year has been a big one. It would not have been possible had it not been for modern motor machinery. Avery Tractors supplied a large amount of the power back of this big national crop. Avery Tractors and Plows turned thousands of acres of ground, prepared the seed bed and planted and harvested the grain crops. Avery Motor Cultivators planted and cultivated thousands of acres of corn, cotton and other row crops. Avery Separators threshed and saved millions of bushels of grain.

The Avery Company Will Exhibit at the Los Angeles Tractor Demonstration Sept. 17 to 21

An Averyized ranch means success. Tens of thousands of Avery machines are in successful operation throughout the world. There is a size Avery Tractor for every size ranch, an Avery Plow for every size Tractor and an Avery Thresher for every size run. With one of these outfits in the size you need and an Avery Motor Cultivator, your power requirements are taken care of.

Motor Machinery Specialists

The Avery Company are motor machinery specialists. Avery machines are built complete in the three big Avery factories and backed by prompt and permanent service through the Avery Branch Houses and Distributors covering every State in the Union and over 60 Foreign Countries.

When you get an Avery you get a Tractor with renewable inner cylinder walls, adjustable crankshaft boxes, patented sliding frame, patented gasifiers that turn kerosene or distillate into gas, and a tractor that you can attach instantaneously to any machine, either for belt driving or pulling at the drawbar—the coupler is automatic and the belt pulley is always in place.

All the special features in Avery Tractors as well as in Avery Threshers, Motor Cultivators and Plows are shown in big free Avery Motor Catalog. See nearest Avery Dealer or write direct for catalog.

TEAGUE QUALITY

CITRUS TREES

Orange, Lemon, Pomelo and Lime, bud selected (pedigreed) trees, subject to immediate delivery. Correspondence invited and prices cheerfully quoted.

Founded in 1889

R. M. Teague Citrus Nurseries
SAN DIMAS, CALIFORNIA

IMPROVING THE ORANGE CROP

Not only an increase in production, but what is of equal importance, a higher and much more uniform grade of fruit, is secured by propagating only the most desirable strains of oranges. This has been demonstrated by specialists of the United States department of agriculture who have been conducting investigations since 1909 in citrus fruit districts of California. The primary objects of these investigations were to ascertain the variation which has taken place; to determine the extent to which the different variations have been propagated; and, if possible, to control the extent to which undesirable variations shall enter into the population of commercial groves. The data collected have been published in Bulletin 623, "Citrus-Fruit Improvement: A Study of Bud Variation in the Washington Navel Orange," and Bulletin 624, "Citrus-Fruit Improvement: A Study of Bud Variation in the Valencia Orange."

The various strains of oranges are distinguished by differences in habits of growth, time of ripening, quantity and quality of crops, and other definite and marked characteristics. Trees of some of the undesirable strains show unusually strong vegetative growth, but a poor production of fruit which is of inferior quality. Trees of some other inferior strains bear fruit of irregular and peculiar shapes, undesirable and unattractive color, rough and ugly surfaces, thick peel, a large amount of coarse rag, or a small amount of juice, or juice of a sour or bitter flavor. The fruit produced by some strains is so poor as to be wholly unfit for market.

It is recommended that individual tree performance records be secured in all commercial groves, and that all trees of other than the most desirable strains be removed. This can be done by replacing the inferior trees, or by top-working them. All budwood, whether for use in top-working established trees, or for nursery propagation, should be cut from fruit-bearing branches, one or more typical fruits of the strain desired being cut off with each bud stick as an index of the character of fruit which will be produced by the buds on that stick.

A practical method for securing tree performance records for the purpose of locating undesirable trees, and a discussion of the treatment of such trees, is contained in Department of Agriculture Farmers' Bulletin 794, "Citrus-Fruit Improvement: How To Secure and Use Tree Performance Records," by A. D. Shamel and C. S. Pomeroy.

CALIFORNIA BEAN GROWERS

"The California Bean Growers," writes its president, Geo. A. Turner, "includes about a thousand bean growers, representing great capital and we naturally feel that the government will consult us when it seeks to arrive at a fair price for the 1918 bean crop. California produces just about half of the beans grown in the entire United States and we were this year urged to plant freely in order that our army and navy and those of our allies might have plenty of beans. While we were not enthusiastic about the prices then being offered and although we had to face the seriousness of a labor shortage, we went out and planted beans as we never planted them before.

"This was very fortunate, for it has turned out that this is not a good bean year and the production per acre will fall far short of that of 1917. The total production will show up well, however, for the increased acreage will balance the shortage of yield. We anticipate, of course that the prices for the 1918 crop will be high enough to outweigh the greatly increased cost of production.

"As an association of growers, we are working in close cooperation with the United States food administration. The grower does not want to fix the prices for beans but he does want to be sure that the government fully understands the conditions under which he is producing. When all the facts are laid on the table, he is sure the government will give him a square deal.

"Heretofore, one of the difficulties has been the impossibility of the government's consulting thousands of individual bean growers. Now that we are organized, the views of a thousand growers can be voiced by one authorized representative."

The One Enduring Metal for Crawler Tractors

THE track of a Crawler type tractor meets gruelling service. It must be constructed of wear-defying metal. Otherwise you have constant repair bills and loss from an idle tractor during the busy season.

"Amsco" Manganese steel is as superior to carbon or alloy as hickory is to the soft pine. It increases tractor durability by giving you a track that practically defies wear. It is the most satisfactory metal that has ever been discovered.

"Amsco" Manganese Steel Is Found On Leading Crawler Type Tractors

Tractor makers are fast adopting "Amsco" Manganese. It is proof against abrasion and friction and when used as track metal it stands the wear of constant rubbing against the soil.

Tractor Parts That Should Be Made Of Amsco Wear-Defying Steel

"Amsco" is the "Steel of Endurance" for

Shoes	**Links**	**Pins**
Grousers	**Rollers**	**Lags**
Spacing Blocks	**Sprockets**	**Chains**

Transmission Gears

In Wheel Tractors it is the metal for bull gears, pinions, sprockets and transmission gears.

See "Amsco" at Sacramento and Los Angeles

Many "Amsco" equipped tractors will be exhibited at the Sacramento and Los Angeles demonstrations. You will find these tractors among the leaders in each class and price. May we not mail you new issue of "Amsco Tractor Parts Bulletin"?

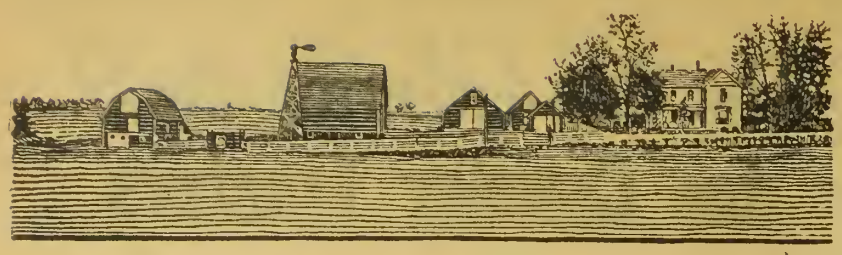
WEAR-DEFYING STEEL



A Pennsylvania Farmer Says Concerning Electric Motors on His Farm

"A one-horse power motor is located in the spring house for separating milk, churning butter, turning a grinding stone, etc.

"In the house, my wife has a ⅙-horse power motor for running a washing machine. This motor can be attached to any lamp socket.

"In the barn a 15-horse power motor mounted on a little truck may be moved to any part of the barn or barnyard for grinding feed, baling hay and threshing grain. By extending the cable we have used this motor 400 feet from the barn."

This letter suggests equally profitable installations around your house and barns. The General Electric Company manufactures all sizes of electric motors for farm use. Information will be gladly furnished by your lighting company or our nearest motor agency.

Propagating Room for Insects

Truck crop investigations of the United States Department of Agriculture near Los Angeles has a station and headquarters on North Marguerita Avenue, Alhambra. This station in charge of Messrs. Campbell and Ryan has been the means of material encouragement to truck crop growing in Southern California; Mr. Ryan's work is almost entirely outside, visiting from ranch to ranch. Any truck growing community which has an insect problem on its hands may secure material aid from this station. Mr. Campbell's work is largely investigational and the illustration above shows his breeding room or cage where beneficial or injurious insects are housed.

UNCLE SAM'S FIGHT

Continued from Page 229

ious infestation later on. The ordinary practice was to plow later after the eggs had hatched. Many insects lay their eggs or find shelter in rubbish, old corn stalks, beet tops, and other plants left in the field after harvest. It was found that by removing these, plowing them under, feeding or burning them, later insect troubles would be thereby averted. Rotation of crops is another agricultural practice which was demonstrated to be effective against many insect outbreaks.

The main object of all entomological investigations is, of course, to find an efficient method of control; natural enemies if possible, a change in agricultural practice, or finally some artificial method, such as spraying, fumigating, poison baits, traps, etc. Many different methods and materials are tried in order to find which are the most efficient and practical.

Besides the executive work, some investigations are carried on at Washington, D. C. However, most of the practical entomological work is conducted in more or less temporary field stations scattered over the country. These are situated so as to be easily accessible to several localities in which injurious insects are present.

The division of truck crop insects maintains such a station at 800 North Marguerita Avenue, Alhambra, where investigations of insects affecting beans, beets, and truck crops are being carried on. Figure 1 shows the house used for office and laboratory, figure 2 shows the screen insectary in which experiments are carried on under practically natural outdoor conditions. The fields of the San Gabriel and San Fernando Valleys are easily accessible, and numerous good roads make it possible to get to all parts of Los Angeles and Orange Counties in a short time. In fact, all of Southern California is covered in the investigations of truck crop, bean and beet insects.

At the present time the principal insects under investigation are the pea aphis, the bean aphis, the celery worm and the broad bean weevil. Slugs and snails are also being studied. As soon as the work on any of these is finished some other pest of our crops will be taken up.

Besides the experimental work, a force is maintained to carry on demonstrations as well. Whenever there is an insect outbreak, or danger of one on the above mentioned crops, advice is given as to the best method of control, either verbally, through correspondence and the distribution of literature, illustrated talks at farm bureau, and other meetings, or by actual field demonstrations.

This Month in the Vegetable Garden

Northern California

Written for California Cultivator By A. R. Gould

AS THERE is still an urgent need for us to keep on producing vegetables to help out the food supply we must this year keep on to the very limit, and it is possible that we may yet be favored with mild weather during the next two or three months and we can therefore have quite a few more subjects in our fall garden and be well supplied through the winter. Should we be fortunate enough to get early rains and a much heavier rainfall this season we shall be justified in preparing for this as an increased rainfall is certainly now about due.

It will also be necessary for us to make a general survey of our plots and clean off all those from which we are taking our last crop such as early corn, beans, lettuce, and potatoes. Have these well prepared by trenching deeply with well rotted manure and refuse, wood, ashes, etc. Have all these plots well fortified and put into shape for heavy cropping during the coming season, and it will also be advisable to keep a record chart of the name of crop grown on the particular plots this season to enable you to carry out your system of rotational cropping for this coming season. This is of great importance, and furthermore it gives one greater interest. You can also include such data as the yields, and condition of crop, etc. Dates of sowing and maturing of crops are also very essential details. There will also be undoubtedly a surplus this month, and nothing should be allowed to waste in the ground. There are easy ways of storing and drying and the crops are urgently needed. Furthermore save all the seed you can. This has gone up in price and there will be a shortage on some things.

Beets

Sow on richly manured ground Extra Early Egyptian. Sow the seed in rows very thinly and keep well watered for quick growth. A sowing of the Sea Kale beet or Swiss chard used as spinach may also be made at once. The leaves of this plant may be cut very often. It belongs to the cut and come again variety and should be in every garden.

Potatoes

This crop will be now ready to dig and store away, in fact some have no doubt completed this work. Great care should be taken not to bruise any part of the tubers, and only those which look absolutely sound should be stored away for the winter. It pays to examine them, as any tubers showing signs of disease, if put with the others will soon cause trouble. They should be stored in a dark but not damp place.

Celery and Leeks

Continue to assist the development of these by the application of liquid manure and it will also be necessary

to bleach by tying cardboard or burlap around the stems to make them white.

Carrot

Early Short Horn is an excellent variety to sow during this month. If you have just cleaned off the bean plot sow the carrots there very thinly.

Lettuce

Thin out the varieties sown last month and transplant the best seedlings very carefully and keep them well irrigated. This crop will need all the water you can give it. You can also make the last sowing for the season, using Big Boston variety. This should provide some late lettuce and is a variety which is fairly hardy. California Cream Butter, is not quite so well known but is also valuable for winter use.

Beans

It will not be too early to sow the "Broad Windsor" bean, which is the type known amongst farmers as the "horse bean," but with those who have become acquainted with its food value it is very popular and well worth growing. Not only that but it is ready early in the season. Sow in rows two feet apart, and the beans should be grown at least three or four inches apart in the row. All dry beans should be collected as the pods ripen.

Cabbage

For winter use sow Autumn King, which forms large solid heads. Sow the seed thinly broadcast on some well prepared border, shaded from the sun.

Strawberries

It will be observed that runners are now rooted near the parent plant, and these may be removed and new plantings made. Have the new plots deeply and well trenched with manure and moist before planting.

Tomatoes

These should now be fruiting heavily, and any fruits showing signs of disease should be removed, as the fungus disease quickly develops and the spores quickly spread. Where the soil is inclined to be poor a watering with liquid manure weekly will prove of very great assistance.

Musk Melons

It will be advisable to place a thin piece of board under the fruit. This will then keep them off the ground, as they are liable to rot through excessive moisture.

Southern California

Written for California Cultivator
By D. F. Reichard

AT THIS time of the year when spring sown crops are maturing, remove the litter as fast as possible either by turning it under for fertilizer, burning or cutting it up to make a compost pile. Soak the cleared ground thoroughly to a depth of three feet, plow or spade the plot eight inches to a foot and work it well, making a good seed bed for the reception of seeds for winter crops.

Crops that are already in should be watched that they do not get dry. September is probably the most drying month of the year—it's the end of a long dry summer and the crops grown through the summer have taken all the moisture out in making their growth. On many soils it is advisable to irrigate and plow twice to get the ground in shape to properly germinate the seed. This is done by first thoroughly soaking the ground. Then as soon as it is dried out enough work it up and let lie for from two to four weeks, then irrigate again and work it into shape for planting. By this method the ground is in shape to germinate the seed and bring the young plants up so as to show the rows before it will be necessary to irrigate. After the plants are up furrow out between the rows and irrigate, after which cultivate as soon as the ground can be worked without the dirt sticking to the tools.

A great variety of garden stuff may be planted during September, but one must take into consideration his local climatic conditions when planting tender subjects such as beans, corn, cucumbers and squashes. In sections of mild climate plant Canadian and Ventura Wonder beans, one pound to 200 feet of row, dust with sulphur or spray with Bordeaux mixture before they come into bloom to prevent rust or mildew. Plant Early Maturing sweet corn such as Heath's Early Early Minnesota, or Early Adams if you are in a frostless section. These will be ready for roasting ears about Thanksgiving. If cucumbers or summer squash are planted watch them closely for aphis. Spray with Black Leaf 40 to control this pest; also dust or spray with arsenate of lead to kill any eating insects on the foliage.

September is the ideal month for planting hardy vegetables for winter and early spring use. Peas planted early this month should be ready to pick for Thanksgiving. Use the Yorkshire Hero or the Senator, or if you are near the Coast Startagem and Dwarf Telephones are the best varieties. Plant rather thick in rows, the rows about three feet apart, at the rate of 50 to 60 pounds per acre or one pound to 200 feet of row. Be sure that your peas are planted in ground that retains moisture well for it is necessary to keep the roots of peas cool for the plants to do well. Unless they are growing on subirrigated land peas will have to be irrigated and cultivated every ten days or so until the rains come.

At this time use Early Egyptian beet, Chantenay or Oxheart carrots, Snowball Purple Top Globe turnip, Moss Curled parsley, Half Long parsnips and Iceberg or Los Angeles Mar-

Farm for Profit

and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

Test Special Belting

What a lot of chores there are to do.

There's the farm pumping plant, a busy, humming wheel, turned by the TEST SPECIAL belt, to bring up the water and send it on its useful course, raising crops and watering the animals.

TEST SPECIAL is the practical belting for the churn, the wood-yard saw, and the feed-mill, just as TEST SPECIAL is the dependable belting for the lighting plant, and for all the domestic needs.

Why buy a miserable, cheap belt which gives way and renders such poor service, when TEST SPECIAL is so reliable, so worthy of confidence, so sure to last and give years of permanent value?

If you will write us, giving details of your requirements, we'll be glad to furnish plans and specifications to help you decide how to get the best service, greatest efficiency and most economy out of TEST SPECIAL belting.

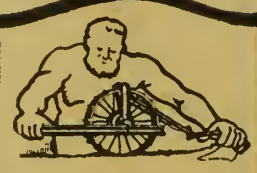
See That Hitch!

THE NILSON PATENTED LEVER HITCH is the greatest improvement in Tractor Design in recent years.

By hitching the plow to a swinging drawbar attached considerably above the rear axle, the pull of the plows is automatically converted into downward pressure, thus giving the drive wheels "GRIP" or traction, without a pound of useless weight.

It enables us to build a tractor with **BIG TRACTION, LIGHT WEIGHT, FUEL ECONOMY.**



The Lever Hitch carries the pull of the plows up over the drive wheel. The harder the pull, the better the wheel grips the ground. Note great width of driving wheel surface.

Found Only on

The Nilson

Because of the Lever Hitch the Nilson Junior, weighing only 5000 pounds, has 3000 pounds drawbar pull at plowing speed, while the Nilson Senior, weighing only 6400 pounds has 4000 pounds drawbar pull at plowing speed.

Nilson Tractors employ three driving wheels keyed on the same axle, making in effect a **WIDE DRUM DRIVE.** They do not pack the soil. They stay **ON TOP.**

It is the Lever Hitch and Drum Drive that enable the Nilson to easily outclass any tractor ever sold in California,—even those equipped with the same Waukesha Motor used in the Nilson.

Nilson Tractors have been thoroughly tried out, and "made good" in California.

See them at the Los Angeles Demonstration, September 17th to 25th.

Distributors, with Repairs and Service, at Los Angeles and Stockton.

ket lettuce for best results. In planting any of this nature of seed double irrigating the land is almost necessary to get a good stand. Beets and parsnips use one ounce to 150 feet of row, while the other items will cover about 300 feet to an ounce of seed. Plant these seeds one to one and a half inches in damp ground. Always plant in rows so as to be able to irrigate and cultivate between them.

Cabbage and cauliflower planted at this time come into maturity during the winter months. Sow the seeds in rows or beds, covering a half to one inch in well prepared damp soil. Use Cannon Ball or Winningstadt cabbage and California Pearl cauliflower. In six to eight weeks the plants should be large enough to set out. An ounce of seed will produce 2000 plants; 7000 to 12,000 plants will plant an acre. Cabbage should be set 14 to 18 inches apart in furrows. Cauliflower is set 24 to 30 inches apart; the furrows three feet apart. Wet the roots of the plants at once after planting and in about a week irrigate down the furrows and cultivate between the rows. This will push loose dirt into the furrows; this covers the roots to a good depth, which they require. Irrigate at intervals of two weeks to keep them in steady growing condition. Spray or dust with arsenic poison (Paris green, arsenate of lime or arsenate of lead) to destroy worms. Brussels Sprouts, kale and kohl-rabi are grown by the same methods.

White Rose potatoes may be planted in protected locations in well worked light soils. Use good sized pieces with at least two eyes on them. Plant five inches deep, a foot a part in rows, two and a half to three feet apart.

Spinach is planted one and a half inches deep in damp soil, one ounce to 100 to 125 feet of row, 15 pounds per acre, rows 18 to 21 inches apart. Giant Amsterdam is the best variety, matures in 60 to 75 days.

Plant Early Queen and Bermuda onion seeds now for early onions. During September it is advisable to start onions in beds and when about the size of a pencil plant out into the field. Cover the seed an inch or less and sprinkle over the whole bed a litter of straw to keep the ground from baking.

In two and a half to three months the plants will be large enough to set out. Thoroughly prepare the ground by working it up a month or six weeks before you expect to plant. This will give the weeds a chance to start and you a chance to kill them before ridging the ground to be planted. Make ridges a foot wide, two and a half feet apart. Plant the sets six inches apart on each side of the ridges.

STATE FAIR NOTES

Continued from Page 227

There are more good Berkshires here this year than have ever before been brought together—and from the information that comes from the east it is safe to state that this is the best state fair show of the breed to be assembled this year.

The one thing about the Berkshire show at this fair that is most pleasing to those most vitally interested in the progress and future of the breed is that each year there are many new breeders who drive into the ring some of the best hogs shown. And these new breeders have invariably been men of standing in the communities in which they lve—men whose judgment and business ability is such that their neighbors follow it.

C. E. Barrows is here with 28 head from the herd of Frank Brush of Santa Rosa, and Mr. Barrows is being commended and congratulated on having one of the most uniform and best fitted lots of hogs that was ever shown anywhere. He is one of the greatest breeders and fitters in the business, and this display is the result of the experience of a life time devoted to the business. The educational value of this production of the best of the breeders and feeders art is hard to estimate.

Charlie Maurer has 24 head from the A. B. Humphrey herd at Escalon—and much the same can be said for this collection. There is keen but very friendly rivalry between these two herds, both of them in the hands of past masters in the breeding world.

One of the sensational features of the show is the exhibit of the Sandercock Land Co. In this new herd foundation animals of the most royal breeding have been brought together. It has the distinction of having the only daughters of a world's grand champion sow sired by a world's grand champion boar, and in addition two sows sired by the grand champion boar at the National Swine show out of the grand champion sow at

the same show. All of these were bought from Brush.

Frank Anderson, the "young" breeder who made a fine record last year, has a much stronger show this—has not only served the interests of the breed by breeding a lot of good hogs, but by giving the merits of Berkshires a great deal of valuable and unique publicity.

Maplewood Stock Farm of Calistoga makes its first show this year, and it is a credit to the institution that has for its motto, "The Best in Berkshires." Homer Hewins, Jr., the manager, is a good judge of hogs and has assembled some of the best individuals of the best families of the breed.

Nevada is represented by two herds; Jas. Wilson, Jr., of Yerrington and the Crescent Creamery of Reno. Berkshires are very popular in the irrigated sections of this rapidly developing state.

W. M. Carruthers is showing seven good ones, and there are many more of his breeding in the show.

The Jas. Mills Orchard Co. of Hamilton City has 20 head—among them some of the largest and best pigs under six months that have ever been shown in the west.

Another new exhibitor with a very creditable show is Castleview Ranch of Santa Rosa.

There is always the best of feeling and harmony among the breeders and visitors around the Berkshire show. Those who visit one year look forward with pleasure and interest to being in on the next.

* * *

THE SHEEP SHOW

The sheep show was small in numbers, but very high in quality. We need lots more registered sheep in California, and a good many flocks are being established. Next year there will undoubtedly be many more shown.

Bishop Bros. of San Ramon have some wonderful Shropshires. This flock has won championship honors at the greatest shows in the world and is worth going a long way to see.

Bullard Bros. Rambouillets from Woodland also have a national reputation and their show is a good one.

An attractive and valuable feature of the sheep show is the exhibit of Dorsets shown by John E. Marble of Redlands. There is a good field for this breed of sheep in California, and the representatives from this flock are in fine shape and attractively presented.

Hampshires are shown by Jos. Levy of Manteca.

HOGS WILL HURRY THE HUN

Written for California Cultivator
By C. A. Briggs

NOT the largest hog show in numbers but as fine in quality and fitting as any in years is the judgment of the show ring veterans at the Sacramento state fair in this war year of 1918. They are all there again; Bassett and Bernstein, Barrows and Beckman, Slocum and Lamb, generals, colonels, majors, captains, down to the newly enlisted privates in the ranks, the enthusiastic boys with the laurels of their boys' pig club victories fresh on their brows. Josh, jolly and dare are flying about the yards and alleys of pigdom, and there must be from all the claims not less than 140 grand champions and a blue ribbon at least for every entry.

It's a good show and every hog lover and lover of his country who plans to raise hogs this year, if never before and never again, to help win this war—which is our war—should be here and pick his foundation stock and buy it too. The best is here, come and see it.

The Poland-China show is fine. M. Bassett shows 18. His sow herd is headed by a splendid boar, Orange King. His great boar got in a fight with two husky sows the day before shipment and was so badly cut that he could not be shown, which is a Bassett misfortune, as many of his admirers had him picked for the grand champion. The sows in the Bassett showing are probably the best that he has ever shown, which is a pretty strong statement. Archie Bassett is a chip of the old block. His daddy says, "a new block better than the old one," shows ten entries with a wonderful specimen boar who helped lick his dad, Model Fellow, before leaving home. Mr. Bassett the elder is ready to admit that the judge may pin the ribbons on Archie.

John M. Bernstein shows 20 head of the Poland-Chinas. They are good ones. John won't have any other kind. His junior yearling boar, California Smooth

EFFICIENCY AT THE STATE FAIR

Continued from Page 225

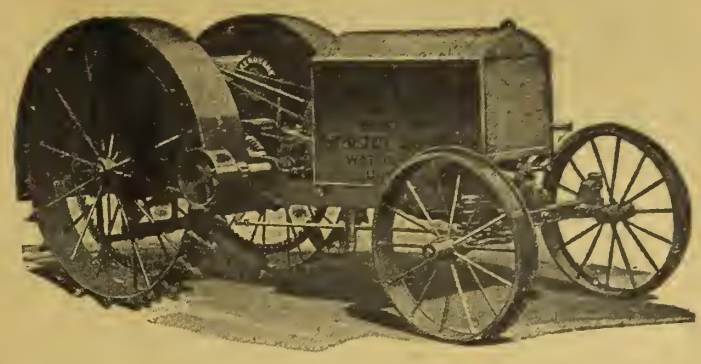
But it's no funeral occasion. Believe me, there's a swing and a stride of which the Kaiser's agents on this side may well take a few snap shots for the perusal of the All Highest and his six sons, every one of which ("which" is all right and perfectly grammatical in this case) has survived the rigors of four years of war with great fortitude.

But the Yanks are coming!

And here at the fair it's all war—save a moment when we stopped to love the lover.—C. B. M.

Sacramento, Aug. 31.

Interstate Tractors



13-30 "The Plowman" 15-30

See these tractors operate at Tractor Show September 17th to 21st, inclusive, Space No. 13.

Watch this "PLOWMAN" get down and pull. Read these specifications:

Specifications 15-30

DRAW BAR—15-H. P. BELT—30-H. P.
RADIATOR—Perfex, extra size, non-freezable. Cooling—triple type, fan, pump and syphon.
MOTOR—4-cylinder Buda YU, 4½-in. bore, 6-in. stroke. Lubrication—full force feed under pressure to all bearings.
IGNITION—High tension magneto, with impulse starter.
CARBURETOR—Bennett producer type multiple jet 1½-in. Adapted for kerosene or gasoline.
AIR CLEANER—Bennett Centrifugal, making motor dirt proof.
CLUTCH—Multiple dry disc type, eight discs, raybestos facing.
GOVERNOR—Our own enclosed fly ball governor.
TRANSMISSION—Foote standard sliding gear, running in oil. Two speeds forward, one reverse. Plowing speed, 3 miles per hour. Reserve speed, 2 miles per hour.
BEARINGS—Long series Hyatt Roller Bearings used throughout transmission.
GEARS—Drop forged, heat treated, hardened.
BELT PULLEY—8x14 inches, 590 r. p. m. Belt speed 2600 feet per minute.
DRIVING GEAR—Solid cast iron ring gear of extra strength and width.
REAR WHEELS—French & Hecht 60x12-in., Hyatt Roller Bearings in dust proof hubs.
FRONT WHEELS—French & Hecht 30x5½-in. detachable rims. Hyatt Roller Bearings, dust proof hubs.
BRAKE—Raybestos lined band brake.
FRONT AXLE—Oscillating, short turn.
FRAME—Heavy 5-in. steel channels, 11½ pounds to the foot.
WEIGHT—Total approximately 4800 pounds. On front wheels 1850 pounds. On rear wheels 2950 pounds.
TURNING RADIUS—Inside. 15 feet. Tread, 4 feet 11 inches.
DIMENSIONS—Height of tractor, 5¾ feet. Length over all, 13 feet. Width 5½ feet. Wheelbase, 99 inches.

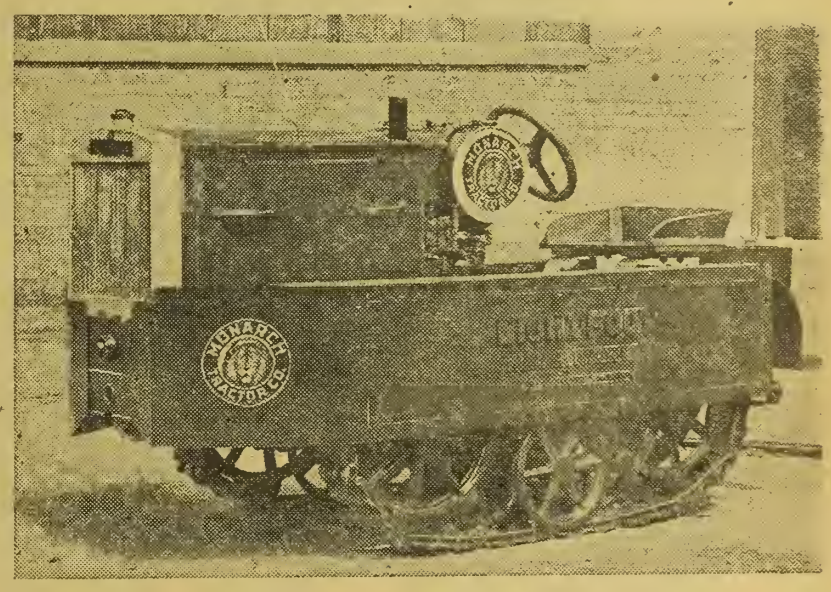
An Opportunity for Live Agents

Monarch Tractors



Made in Three Sizes

Manganese Steel Tracks Car Journal Bearings Easy to Handle Economical in Operation

The Monarch tractor is offered at prices much lower than is asked for other makes of equal capacity and the construction is such as to reduce the cost of upkeep to a minimum. Read what Charles E. Guest of Calipatria, Imperial County, has to say regarding it.

W. L. Cleveland Co., 211 No. Los Angeles Street, Los Angeles. Calipatria, Cal., September 1, 1918.
Gentlemen—Yours received. Will say in answer as to how my tractor is running and what I think of it is, that I am satisfied and well pleased with it. The Monarch has ample power and seems to be holding up well. I am pulling a Holt 5 Disc Plow, six inches deep with it, and it is no load, while the ground plows hard. I am running two shifts every day and have not been held up at all on account of the engine.
I don't think any one could go wrong by getting a Monarch; I have run mine three months and it has not shown any signs of weakness or wear and is economical to operate. Yours truly, C. E. Guest

The illustration is of the light orchard and vineyard machine. Larger sizes known as the 12-20 and the 18-30 are now in stock for immediate delivery. Send for printed matter regarding the Monarch. Will be shown at the Tractor demonstration September 17-21.

WATERLOO BOY
The Original Kerosene Tractor
For War-Time Speed in All Farm Work

Thousands of Waterloo Boy tractors are drafted into service to speed up farm work—standing the most drastic service tests in field and belt work.

Its three-plow pulling capacity and 25 horsepower at the belt, easy handling and dependability give it the widest range of usefulness on the average farm.

1 Man
2 Speed
3 Plow

Stands on the Bedrock of Over 4 Years Proven Success

The Waterloo Boy has long since passed the experimental stage. It has the confidence of the farming world because of exceptional performance in the hands of users.

Powerful, quick-starting motor, perfect kerosene-burning manifo'd, automatic lubrication, complete and easy accessibility of working parts, are some of the features you will appreciate.

Illustrated catalog, sent free, shows detailed construction and numerous photographic views of Waterloo Boy tractors at work on farms. Write for it.

THE PRESENT line of **International Engines** gives every farmer a chance to buy the very engine he needs at a price he can well afford to pay.

The sizes now run from 1 to 15-H. P., with a special line in the 1½, 3, and 6-H. P. sizes, known as the **International Type M.** All sizes, even the smallest, operate on common coal oil and other cheap fuels testing down to 39 degrees Baume. Every engine develops more than its rated horse power. All conform to International standards of quality, insuring good service, long life, and cheap operation.

It will pay any farmer who is in the market for a good engine, at a fair price, to pay close attention to the International line. If you can use a 1½, 3, or 6-H. P. engine, the Type M will give you a number of pleasant surprises in features, the value of which any engine-using farmer can appreciate.

The local dealer either has an International engine in stock, or can get one for you to see. If he has not told you about our engines yet, write us for complete information.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Garden Book—Ants

I have just finished reading your "The Garden Beautiful" and am very much pleased with it. I have learned more from this volume than any of the several others I have on flowers. Is there any large one volume work on flowers and shrubs which one could get to help out a rank amateur in the flower garden?

Also, in the California Cultivator (July, I think) I saw a note by you on the Australian shrub, oleaster, but I can't find any catalog which lists it. Of whom could I get this shrub? At what time and how long does it bloom? Do you suppose the camphor tree would thrive here?

As to ants, what is the proportion of that alum and lime mixture, 50-50? The ants are a fierce proposition in Redwood City—C. L. G., Redwood City.

There is no large volume on gardening in California and none that carries so much on gardening proper as "The Garden Beautiful." Others may contain lists and descriptions of plants for California gardens, but such lists and descriptions are to be found in nurserymen's catalogs. But one firm in California handle oleasters, the name of which has been sent you by mail. Information as to its habits and pecularities of behavior in California must be supplied by them as you are in their section of the state. The camphor tree should thrive with you. The alum-lime mixture is usually a 50-50 "dope." Would advise writing University of California, Berkeley, for their bulletin on ants and follow treatment therein advised.—E. B.

Estimating Weight of Milo

Will you please tell me how to estimate the amount of milo in the head in a bin?—Subscriber, Lindsay.

We have no data whatever on this question and will pass it on to our subscribers. Here, however, is a suggestion which may be helpful in arriving. It is for measuring Indian corn on the cob. "Multiply the length in inches by the breadth in inches, and that again by the height in inches, and divide the product by 2748 (the number of cubic inches in a heaped bushel), and the quotient will be the number of bushels of ears. Take two thirds of the quotient for the number of bushels of shelled corn." Regarding estimating milo one could take any square measure such as a packing case or drygoods box and fill as nearly as possible in the same manner as the bin or crib of grain has been filled. This could first be measured and the number of cubic inches ascertained. Then the net contents could easily be determined and the number of cubic inches per bushel or per cental could be quickly approximated. However, it must be borne in mind that any sorghum grain on the head would weigh more per bulk according to the depth of the crib or receptacle than would corn. That is, there would be more grain per thousand cubic inches at the bottom of a 10 or 15 foot container than there would be at the top. Hence it would be a matter of judgment as well as measurement.

Castor Beans

Regarding price to be paid for wild castor beans, if purchased at all, we have written California Castor Bean Association which is handling contract with the war department for 10,000 cars planted with imported seed. Mr. Ganes writes that he has not yet heard definitely from Washington as to whether the department will purchase California wild castor beans at all. If they are purchased, however, he thinks there will be a market for them around $2.00 per bushel.

Name of Apple

In regard to query as to name of apple in Cultivator of August 24 we have the following from E. L. Overholser, assistant professor of pomology in the University of California.

We have given the apple a good deal of study and it seems to be the unanimous decision of the members of the division that it most closely resembles the variety known as the Wagener. With the great variability within a given variety, however, we would not be in a position to state definitely that this is the correct variety named. We would suggest that next season three or four specimens be sent and that we have this additional material to justify our original conclusion. We can, however, be sure that the variety is neither the McIntosh, nor the Fameuse. It is not characteristic of either of the varieties, and the Fameuse and McIntosh belong to a group that succeed best in higher altitudes and more cold regions, while the Wagener is a variety which seems to be adapted primarily to maritime regions.

Lice on Calf

What is the best way to control lice on calf?—Subscriber, Guernsey.

There are good commercial dips which even largest of stock raisers now generally used in preference to taking the time for homemade dips. Therefore we would suggest that if subscriber has dipping tank he should get the regular commercial dip and dilute and use according to directions on can. In case he has no tank or vat then spray or apply with brush.

Bronchitis of Poultry

Would you kindly tell me through your paper what I can do for my chickens? They have a rattling sound in their throats when they breathe. Have tried every thing that I know of to stop this but cannot find a cure. Kindly tell me what it is and if it can be cured.—Subscriber, Novia.

Bronchitis is the cause of the rattling in your chickens' throats. This is due to something wrong in their roosting quarters, which makes them take cold at night. It may be that they are crowded or that their roosting house is not sufficiently open for these warm nights, so that they are chilled on coming out in the morning. There may be a draft through a crack behind the roost or water standing in or near the house. Bronchitis is always caused by something wrong in sanitary conditions, and the only cure is to remedy conditions. A dose of olive oil sometimes helps to relieve the inflammation, but unless the birds are in comfortable, dry, well ventilated quarters there will be no cure.—J. A. K.

Potatoes for Milch Goats

Supplementing answer to a query in the Cultivator of August 10, "Potatoes as Goat Feed," C. Lyman Shedden writes:

When used as an exclusive feed, potatoes will not materially increase the milk flow, and besides are conducive to indigestion and impart to milk an unpalatable flavor. But when boiled

with carrots and fed as a mash with bran the combination is to be recommended. I have found in my many years experience that a heavy milk producing doe is half made in the rearing, and a generous feed of this mash, covered with clear warm water and fed to growing kids, greatly develops the milk glands.

TRACTOR SHORT COURSE AT VISALIA

A course of Operation, Management and Care of Gas Tractors will be held at the Visalia high school September 23-28.

Instruction is to be given by instructors of the University of California, the course to be the same as the gas tractor short courses heretofore given only at the Davis and Riverside and is designed to serve Fresno, Kings, Kern and Tulare Counties. This will be the only short course given in the San Joaquin Valley this year. Indications are that there will be general enrollment from all four counties.

Nine, perhaps ten, tractors will be used to demonstrate the principles of care and upkeep; namely the Bean, Samson, Best, Moline, Holt, Case, International, Wallis, Fordson and probably Cleveland. These, with one exception, are popularly and widely used tractors in South San Joaquin, are adapted to both general farm and orchard work, and are coming into wider use. Some of the agencies have placed 50 or more in the last few months. Speeding up production means speeding up operation and the tractor is helping to solve the problem.

The course is being promoted by the Tulare County farm bureau adviser, C. M. Conner, the Visalia high school agricultural director, R. J. Baker and a committee of tractor owners. A registration fee of $2.00 will be charged to cover expenses. It is desirable that all who expect to attend should notify R. J. Baker, Short Course Registrar or C. M. Conner, Farm Adviser, Visalia, California. A detailed program and complete information will be sent immediately upon request.

SELECT GRAIN SORGHUM SEED

Now is the time to provide for a supply of grain sorghum seed to sow next spring. Select enough of the best heads from the field before harvest time. Pure and high germinating seed of adapted varieties gives best results. Uniformity in stand and in ripening of the crop increases the yield and quality of the grain. When the stalks are all of the same height, harvesting is easier, whether done by hand or by machinery. A lot of poor seed is used each year which is a source of loss to the growers. Guard against that loss next year by selecting homegrown seed. Do not depend on the grain bin or that of neighbors for a supply.

Select heads from plants all of which are dwarf or of average height.

Select early maturing heads.

Select well-formed and well-filled heads of the same type and uniform size.

Select heads that grow completely out of the boot.

Select compact, not sprawly, heads with short, well-loaded branches.

SHATTERING THE GERMAN SWORD

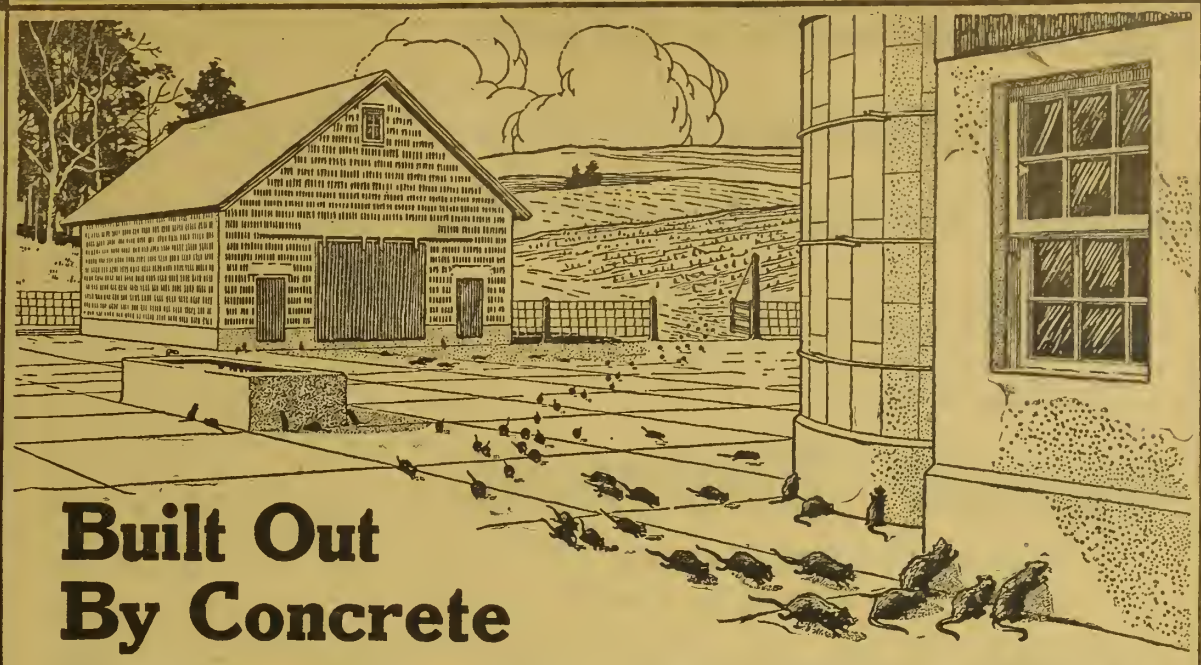
Famine is Germany's trusted weapon in her plan of conquest and slavery. By this dread power she has enforced the deportation of workers, broken down the family unit, caused indescribable terror and anguish.

Famine has desolated Poland, disorganized Russia and forced Rumania to peace.

Germany counted on this weapon in her warfare against Europe, and boasted that her submarines would cut off food supplies and bring England to her knees in three weeks.

But America has shattered the German sword. She has loaded every steamer that came to her shores and the Allies have been fed.

The food minister of France has requisitioned 1918 forage crops. The maximum price for best quality will be $1.00 for 100 pounds and 86 cents for second quality.



Built Out By Concrete

No chance to get into these farm buildings!

Concrete foundations, concrete walls, concrete barnyard pavements, concrete feeding floors provide no home for this army of rats seeking winter cover.

No Rat Can Gnaw Through Concrete

There are no nesting places under concrete floors, no chance of entrance through concrete foundations. Waste caused by rats is enormous. If you house them, you must feed them, and this is no time to feed an army of rats. We must feed our soldiers.

Build Out the Rats with Concrete

Write our nearest office for your free copy Bulletins 131 and 141. They will tell you how you can make your farm ratproof.

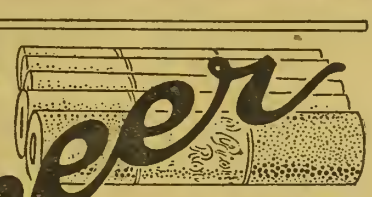
CONCRETE for PERMANENCE

TO PREPARE FOR THE RAINS REPAIR YOUR ROOFS WITH Pioneer ROOFING



NOW IS THE TIME TO GET READY

Have your roofs inspected and if they show indications of leaking this winter—have the repairs made now and don't be caught napping. Keep your buildings up. Don't let them go to pieces for lack of adequate repairs. It is cheaper to repair than to rebuild.

The roof is the most important part of most every building. Just think of the great damage that one little leak can cause.

Pioneer Roofing

—is very economical

Its long life and splendid wearing qualities make Pioneer Roofing a favorite with careful buyers everywhere. In addition, its attractive appearance adds 100 per cent to the looks of the building.

ASK YOUR DEALER FOR PIONEER — THE ORIGINAL and reliable ready roofing. If he cannot supply you, write us.

Second Modesto Sale

90 Registered 90 Holsteins

Modesto, California Thursday, October 17, 1918

Contributors:

H. E. Cornwell, Modesto
J. W. Benoit, Modesto
Luther Thompson, Modesto
A. M. Bibens, Modesto
C. G. Outland, Modesto
Bonita Stock Farm, Lodi
R. L. Holmes, Modesto
J. A. Pelanda, Modesto
Bridgford Company, Knightsen
The J. S. Gibson Co., Williams
J. M. Campbell, Escalon
Henderson Co., Sacramento

Including the absolute dispersal of the C. G. Outland herd, which contains a choice lot of young cows and heifers, those of breeding age bred to the 30 pound bull Hubbavale Artis Twisk Netherland, who will also be sold.

Luther Thompson is making a beautiful consignment, including a great 23 pound four year old, and his splendid herd sire, Sir Chimacum Wayne Woodcrest, who is by a son of Chimacum Wayne Boon and out of a 29.86 pound junior three year old.

Look for future announcements of this great sale giving list of entries of all consignors. There will be many extraordinary values in this sale, both in males and females, and prospective buyers should make plans now to attend it by all means.

Catalog in preparation. Write for one.

MANAGEMENT

California Breeders Sales and Pedigree Company

C. L. Hughes, Sales Manager — J. M. Henderson, Jr., President

Sacramento, California.

HOGS WILL HURRY THE HUN

Continued from Page 235

Jumbo, is a wonder. Sow in aged class, Fruitful Maid, will surely be in the finals. Some others of his display out of his great boar President are well worth looking over. Don't miss 'em.

W. L. Haig & Son show six of the Polands, with a splendid smooth boar, Young Jumbo, and three fine typey sows as the leading feature.

Hale I. Marsh's Modesto herd is as always among the leaders. The grand old favorite I. B. A. Wonder, the Panama-Pacific reserve grand champion, is still in the running, walking off his 1000 pounds or more without any trouble. One of Hale's sows, Big Knox Girl, isn't far behind, with her 900 pounds flat. She is so very good that many are saying, "It's all over but the shouting."

J. H. Cook of Paradise shows 15 Polands from that heavenly place, among which is a very smooth fine line bred Big Bone sow.

The Modesto herd of J. H. Hansborough shows the grand champion boar of Sacramento 1917, Major Hadley Wonder. He looks in good condition and weighs 100 pounds more than when he won his spurs, now topping the scales at 900 even. He has a great back and bone and will certainly be noticed in the ring.

J. W. Wakefield shows 19 Polands, including a sow and litter of nine that he sold the day before the fair began for $850.

W. A. Young and J. A. Clark show 28 Polands, one junior yearling sow, one junior yearling boar, and the herd sire, Big Bone Bob. "Bob" is a good one. Don't fail to see him. The whole herd is in fine condition, and so is "W. A."

John Leeman shows 10 head Polands, all of one litter and all good quality.

Dimmick Brothers show 17 head Polands headed by senior yearling Model Wonder. In aged sow class Stella Hunter. Balance of stock shown in under year classes.

Geo. V. Beckman & Sons show 21 Polands; junior yearling boar Matchless Big Bob of U. C. Balance of exhibit in under year classes. "George" and the boys are putting up a good show. Take a look at 'em.

Elmer Lamb's Ceres herd of Durocs is, as usual, the "Lamb kind," with good lines and well fitted. Among them worthy of special note are three under year sows, and a boar of extra quality.

J. M. De Vilbiss shows 14 head of Durocs. He is unable to show his 1917 Sacramento grand champion boar, Crimson Monarch 2nd, as he lost him in July, but his showing is a very good one.

F. W. Gardner shows Durocs, four gilts, one under year boar, one aged sow, and one aged boar. They are good.

Dr. E. J. Weldon shows Durocs, four head, three gilts and one boar, all young. Leslie Dixson shows six head of very good under six months Durocs.

Jack Boyd shows Durocs, among others a good aged boar, son of Crimson Wonder 2nd, Sacramento's 1917 grand champion.

J. H. Minto shows ten Durocs, an aged sow, sired by Crimson Monarch 2nd; two senior yearlings and younger stock.

V. F. Dolcini, 25 head of Durocs, many of which show good breeding and individuality.

J. E. Thorpe, 12 head of Durocs; a good showing of yearlings and under year. Futurity stock sired by Johnson's Defender, is of special note. One yearling sow especially smooth and nice in spite of having raised ten pigs.

Glenn County got in late with a big shipment of Durocs: H. P. Slocum, 55 head of his Uneeda Glenn County herd, full classes; W. H. Mains, seven head; C. W. Smith, five head; C. D. Bright, four head; C. W. Scott, eight head; Hollingshead & Sons, six head; John M. Martin and C. R. Hedges, 11 head; W. V. Bennett, two head. This is the biggest county exhibit of any breed shown at the fair and reflects great credit on Glenn County breeders. Shipment totals 99 head.

F. M. Johnson, from Napa, shows Durocs; a fine futurity litter and a junior yearling boar. Mr. Johnson was unfortunate in losing his champion boar, Johnson's Defender, a short time ago, which broke up the exhibit he had planned.

Harry Bailey has the only exhibit of Mule Foots, ten in number. Several are of outstanding merit.

Mrs. L. M. Yore shows eight Chester Whites; Highland Stock Farm, three Chester Whites.

Hiram Henderson, a winner of a first prize in boys' pig club contest, shows five Chester Whites.

R. Dawson, Gardena, shows six Hampshires, two in aged class and four junior pigs. His aged boar weighs 700 pounds at two and a half years.

L. A. Denker shows 24 Hampshires, including five aged sows of great merit. Mr. Denker's fine boar died on the way to the fair.

Conejo Ranch shows 30 Hampshires; ten aged sows, one aged boar, one senior yearling boar, all good, one junior yearling boar, and three very fine fat barrows.

AMONG THE DAIRY BREEDS AT THE FAIR

Written for California Cultivator By C. A. Briggs

NOT a large showing, but a good and an interesting one. The old guard of exhibitors are here as usual; Miller. Thorpe, Conant, Hayworth, Hand, Williams, Locke, McFarland, Humphrey, Saylor and others, representing Jerseys, Guernseys and Ayrshires.

Dr. H. W. Hand shows seven head of Jerseys. J. E. Thorpe has 17 head, Guy H. Miller 15 head, N. H. Locke 15 head, C. D. Hayworth 10 head, D. F. Conant 13 head, J. E. Wherrell four head, S. F. Williams 10 head.

Among the Guernseys L. D. Smith shows 17, W. H. Saylor two, T. I. Levy two, A. B. Humphrey eight.

Milking Shorthorns are represented by Geo. A. Murphy and Alexander & Kelloggs. "George" has 11 head, headed by two-year-old Sunnyside Chief. He also shows an extra good under-year bull. His entire showing is in good condition. The Alexander & Kelloggs show consists of 16 head: Senior herd sire, Glenside Royal; junior sire, Westward Ho Imported. All in well fitted order. One of this exhibit's cows, "Sylvia," has recently completed an official test for a year of 11,772 pounds milk and 482 pounds butter fat.

Ayrshire cattle are well represented this year. E. B. McFarland shows 19 head; Preston School of Industry, 12 head; J. H. Meyers Elkhorn Farm, 13 head.

U. G. Strader shows 28 head of Dutch Belted.

DAIRY CATTLE AT THE STATE FAIR

Written for California Cultivator By C. L. Hughes

California's war time state fair shows somewhat of the stress of the times in dairy cattle exhibits, the showing of Guernseys particularly falling short of previous years. The Jerseys are also somewhat short in numbers, and Holsteins are out in about the same numbers as last year. The Ayrshires are also holding their own in numbers, the show this year having one new exhibitor in addition

Santa Anita Rancho

Anoakia Breeding Farm

Registered Holsteins

A herd of fine individuals, strongly bred in the lines of great production as evidenced by both short and long time records, handled in a manner to produce sound, healthy breeding stock.

Merci Lad Korndyke Burke

our senior herd sire, is by De Kol Hengerveld Burke and out of Winnie Korndyke Cornucopia De Kol, 31,034.1 pounds milk and 1201.00 pounds butter in one year, the first cow in California to produce 120.0 pounds butter in one year. A few of his young sons out of good record dams for sale.

to the well known McFarland and Preston School herds.

The dairy cattle showed up in very good condition considering the difficulties under which breeders found themselves in fitting, and the exhibit as a whole fulfills splendidly the aims of the state agricultural society in presenting this year a show that will be of high value in educating growers along lines of greater and more economical production.

Some keen contests will develop in a number of the classes that will face Judge Scribner, and from present indications a fair share of honors will be carried away by exhibitors making their first apearance at this fair.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.
Unsigned communications receive no attention.

Lumps Under Throat

I have three cows with lumps under their throats. When the lumps first form they are as large as an orange and swing loosely under the windpipe. After a month or two they break and discharge a little matter but do not go away, a good-sized lump remaining. Is it caused by eating "broncho" grass? Would it be any use to have them lanced? I have been told that lancing them and then injecting iodine would cure them.—Subscriber, Carlsbad.

Lumps under the skin such as you describe are usually caused by the skin being punctured by a thorn and a piece of the thorn breaking off inside. Yes, open them and do not cut too small a hole. Split them wide open lengthwise of the animal. Wet the inside once a day for a week with tincture of iodine or a solution of permanganate of potash, a spoon to the pint of water.

Cow Fails to Breed

I have a young Jersey cow that had just one calf, that is perfectly healthy and in fine condition, but seems to be hard to get with calf again. Bred her three times to one bull and twice to another, but she came in heat again. Could a good veterinarian tell the trouble by examination?—Subscriber, San Fernando.

It may be that she is too fat and has too little exercise, or she may have tuberculosis. When they first get tuberculosis they sometimes get fat and fail to breed, but because she is fat and fails to breed is no sign that she has tuberculosis. Do not breed her for two or three months. Reduce her flesh by feeding sparingly and put a teaspoon of sulphate of iron in the feed once a day for three weeks. Then when she comes in heat drive her about ten miles to get her well warmed up and after resting for an hour breed her. This will often get the desired results. Also have her tested for tuberculosis if you can.

LEAVE COAL—TAKE SACKS

Disregard of the order instructing coal dealers not to leave sacks with consumers, made effective March 18, led to the announcement today by State Fuel Administrator Schwabacher that violation hereafter will incur penalties prescribed in the Lever act, which is a fine of $5,000 or two years' imprisonment, or both. Notice to this effect has been sent to all retail and wholesale coal dealers in California.

The storage of coal, charcoal or wood fuel in sacks is a wasteful practice and must be discontinued, Schwabacher says. Sacks, now in the hands of consumers, which are the property of dealers, should be immediately returned. Only when coal, wood or charcoal is shipped by transportation companies can sacks be used, the order declares.

An order prohibiting the forking or screening of coal by retail dealers in California on or after September 1st, in the interest of economy has been issued.

Tuberculin Tested State Supervision Individuality Production Butter Fat Everything Guaranteed Breeding

King Korndyke Pontiac

(shown above)

is getting just the sort of calves that we want in our herds, beautiful individuals, nicely marked, and a very large percentage of them are heifers.

Most everyone knows that he is a son of the great and only King of the Pontiacs, but have you stopped to consider what his sisters are doing right here in California? One of them, K. P. Tola Joe, holds the state record for a senior two year old with 27.18 pounds butter in seven days; another, K. P. Idyl Segis, has just broken the state junior four year old record with a production of 35.78 pounds butter in seven days; another, K. P. Tola, made over 34 pounds butter in seven days as a senior four year old; and K. P. Tola Joe came back as a senior three with over 32 pounds butter in seven days.

Why not put a choice young son of King Korndyke Pontiac at the head of your herd? One of his sons sold for $6500.00 at public auction showing the value that the best breeders place on this blood.

We are pricing his young sons at figures that dairymen can well afford to pay, and you will be pleased with the liberal terms we make. Visit the farm or write us now.

Below is our other great herd sire

Prince Gelsche Walker Korndyke

MORE MONEY FROM HIDES

THE present very urgent demand for leather as a war necessity and the increase in price which unscored hides bring on the market emphasizes the importance and even necessity of exercising the utmost care in removing skins from farm animals. By devoting a little extra time necessary in skinning animals carefully—possibly only three to five minutes in taking off the skin of a calf, or 15 minutes in the case of a beef hide—the value of the hide may be increased several times. The tanner pays more for packers' hides than for those obtained from farmers or country slaughterers. This is due in part to better facilities in the large packing houses for curing and storage of hides, but principally to the fact that such hides have been taken off properly. Country hides removed by unskilled workmen are often cut and scored. When such hides come from a tannery scores show very plainly, and in many cases one-half of the thickness of the leather is lost by such defects. Imperfections can be avoided by the careful use of the skinning knife, by keeping the hides clean and free from blood and by proper storage and packing.

The use of the knife may be avoided in taking off calfskins, except on the head, neck, legs, and flanks, as the body skin may be drawn or fisted off. Where the knife is used the skin should be drawn taut with one hand while the knife is used with the other, special care being taken to hold the back of the blade close to the skin. In lieu of the knife some butchers use a wooden stick shaped like a man's thumb and employ a knife only on the portions of the body mentioned.

It is objectionable to have blood on the hides, particularly in the summer time, as it is likely to cause the hair to slip from rotting or decomposition when the hides are packed and the placing of otherwise good hides in the No. 2 grade on the market.

Care should be taken to avoid placing any hides in the pack until they are free from animal heat. Allow them to lie folded for from three to five hours, or sufficiently long to allow the animal heat to get out of them. If this is not done patches of decomposition may result and such hides are often reduced in market value at least a cent or more a pound.

In building up a pack of hides the outer edges should be kept a little higher than the middle, so that the liquid or brine formed by the dissolving of the salt in the natural moisture of the hides may be absorbed by them. If the pack is low on one side, or is built slanting like a shed roof, the brine will seep out, causing the hides to shrink in weight. Use salt that has been screened and is free from large lumps and dirt. Dirty salt will stain the fresh side of hides. One pound of salt to each pound of the hide is the general rule. Hides should remain in pack from 15 to 30 days and stored in cool (60 to 65 degrees Fahrenheit) cellars from which the outside air is excluded.

BASIS FOR GREATER CHEESE INDUSTRY

New regulations lately issued by the United States food administration provide for the grading and sale of foreign type cheese of American manufacture on a basis of actual cost plus a reasonable profit.

In its conferences with producers and cheese makers, the Food Administration learned that milk used in certain varieties of cheese was paid for at a lower rate than practically the same quality of milk used in other varieties. Other inequalities resulting from custom likewise appeared during the discussions.

The regulations adopted and now in force are in addition to those recently promulgated affecting the American or cheddar cheese industry and include such foreign types as Swiss, brick, limburger and Munster. There appears to be no logical reason why more extended manufacture of all these types cannot be fostered in this country, thus providing a plentiful variety to satisfy every taste and at the same time furnishing suitable outlets for surplus milk during the seasons of heavy production.

Certain provisions in the rules are expected to be of great benefit in raising the standard of quality of some of the foreign types, such as round

Swiss, which have been in large demand since the war cut off imports of these types. Improvement in the quality of American made cheese of foreign types should help the industry to meet the competition that is sure to return with the end of the war.

Although under the new regulations margins of profit are liberal enough to take care of cases in which the cost of doing business is unusually high, the rules governing cheese transactions are very explicit and provide that the prices charged by any dealer must not in any case be more than sufficient to return to him a reasonable profit on his investment. As a further measure of control, full reports on costs, margins or prices during any given period must be furnished on demand of the food administration or the federal food administrator for the state.

DUROCS TO SOUTH AMERICA

By Robert J. Evans

The largest sale ever made in Duroc Jerseys, either publicly or privately, was made by a Missouri farm recently, when they sold more than 200 head to the department of agriculture of Brazil. This is reported the largest transaction ever recorded in the pure bred swine industry, not only in numbers sold, but in dollars and cents. A representative of the Brazilian department visited this country and made the selections, with the assistance of Mr. Long's manager, C. J. Tucker. One hundred and sixty of these pigs are now on the way south, and the balance will go on first available shipping space. Seventy-four males and 152 females are in the transaction. They are from four to six months old, and average about 95 pounds. They are to be used as foundation stock to improve the swine herds of Brazil.

In a personal letter to the writer, Benjamin H. Hunnicutt of Sao Paulo, Brazil, who is in charge of the mission and farm at Lavras, Minas, Brazil, and who has bought several Durocs from the leading herds of this country, says: "We are anxiously awaiting the arrival of the Durocs bought by our government in the United States. They will go like hot cakes."

Brazil alone contains more than three and a quarter mililons of square miles, much, of course, not adapted to crop or live stock growing, but a territory much larger than the mind of man can grasp is readily adaptable to live stock growing. This record shipment will doubtless be only a minute beginning of others to follow in regular succession when shipping facilities become normal.

LARGE RECEIPTS OF LIGHT CATTLE

Following a recent conference between packers and federal officials maximum prices are announced at which beef will be allotted for September delivery, excepting on the Pacific coast, for the army, navy and Allies.

The following bases are f. o .b. Chicago, per 100 pounds, for steers of quality and grade satisfactory to the authorized inspectors, chilled and unwrapped. These prices average substantially the same as for the month of August.

475 to 575 pounds	$21.90
575 to 700 pounds	22.65
700 to 850 pounds	23.55

The average weight of cattle marketed this year, it was brought out, is 30 pounds lighter than last, 40 pounds lighter than in 1916 and 60 pounds below the 1915 average. This is due in part to excessive marketing of immature cattle owing to drouth conditions.

To utilize cattle below 475 pounds in weight, the minimum now being supplied on army specifications, housewives and proprietors of public eating places are asked by the food administration to buy cuts from lighter weight stock.

CALIFORNIA INTERNATIONAL

The first annual exhibition of the California International Livestock Corporation is announced in its premium list which is now being mailed by the management. The show will be held at 12th and Market Streets, San Francisco, November 2-10.

Only the workers, "comrades in this great enterprise," bear the honored name—Americans.

Why the cost of producing cattle does not determine their selling price

TO produce a steer for meat purposes requires, as you know, a period of from one to three years.

The prices the producer has to pay for feed, labor and other items during this period, together with weather conditions, determine what it costs to produce the steer.

But the price the producer receives for the steer depends on conditions existing at the time it is sent to market.

If the supply of cattle coming on the market at this time is greater than the consumer demand for dressed meat, the prices of meat and live stock go down.

On the other hand, if the number of cattle coming to market is less than enough to supply the consumer demand for meat, the prices of meat and live stock go up.

Not only do the receipts of animals vary from week to week but the consumer demand for meat also fluctuates.

The rise and fall of prices results from an economic law that operates in every business. It is the packer's task to turn live stock into dressed meat and by-products, and distribute them to the consumer under control of this law.

Market conditions and competition establish the prices the producer gets for his cattle. When meat prices go up or down, so do cattle prices.

The packer can't pay out more money for animals than he takes in from the sale of meat and by-products.

Swift & Company will gladly co-operate in the carrying out of any national policy that will tend to steady the prices of live stock and meat.

Swift & Company, U. S. A.

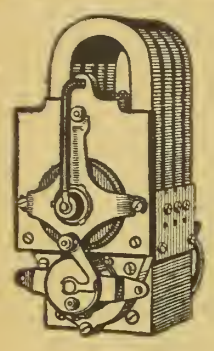
Plow This additional Acreage Without Fuel Cost



Owners of tractors equipped with K-W Magnetos find they can fire thinner mixtures and cheaper grades of fuel and still develop full horse-power, than they could by any other system of ignition.

The intense hot spark that a K-W produces gets all the power out of every drop of fuel. It turns the ordinary wasted fuel into extra work *without* cost. A

K-W High Tension MAGNETO

will start your tractor quickly and easily regardless of weather conditions and will operate on all the low grades of fuel. It gives continuous — no trouble ignition.

Forty tractor manufacturers pay more for K-W Magnetos because they want their users to have the best. K-W Ignition is one of your guides as to quality in your selection of a tractor. Insist that your new Tractor be K-W equipped.

If you are not using a K-W on your present tractor and wish to cut fuel cost — write us. There is a type of K-W Magneto that will do this.

Weed Out the Slackers

Written for California Cultivator By Jean A. Koethen

FROM the first of August on through September and October the most important work the poultryman has to do is to get rid of the hens that are not worth keeping through winter. If he uses trapnests culling will be easy, for while the trapnest testifies only to what a layer has done, past performance gives a pretty good line on future possibilities. Cases have been known where a hen did considerably better in her second year than in her first, but these are so rare that we are justified in concluding that a hen that barely pays for her keep the first year will be a dead loss in the second.

For culling without the aid of trapnests two tests are generally recommended, the color test which has been given considerable prominence of late in the poultry press, and the molting test which is more easily applied and amounts to about the same thing. The hen that is ragged and faded in October is always a late molter.

E. L. Kempster of the Missouri station has gone on record with this statement: "A hen which selects a new coat of plumage before October 1 is unpatriotic and a slacker. She should be condemned and executed. The early molter is a loafer, while the late molter is a heavy layer. Hens rarely lay and molt at the same time and an early molter has gone on a strike before she should. The poultryman will do well to rid his flock of this kind."

While Mr. Kempster's view is in the main correct, it should not be swallowed whole. Among Leghorns it is quite generally true that a hen stops laying while she molts. Among the heavy hens, which carry considerable surplus fat in their bodies, it is not unusual for one to lay right through the molt. While I kept Buff Orpingtons I noticed a good many such, and this summer I have been watching a Light Brahma do the same thing. She began dropping feathers early in July, and I said, "We must eat her." But her comb was red and full and she kept up a persistent singing as if to allay any suspicion on my part. I knew she went on nest regularly, and an examination of her pelvic bones, which were soft and unusually wide apart, convinced me she was laying. Now she is fully feathered out, and as far as I can judge from the production of the pen, which is exceptionally good for August, has never stopped doing her bit. Had we accepted Mr. Kempster's sweeping condemnation, we might have sacrificed one of our best layers.

The secret of the laying of these heavy hens through the molt is suggested in this quotation from the report of the Cornell committee on judging fowls: "A laying fowl uses up the surplus fat in the body, especially from the skin. In yellow skinned breeds this loss of fat can be readily seen by the loss of the yellow color. The different parts of the body become white according to the amount of fat stored in the body and the amount of circulation of blood through that part." If we follow this principle to its ultimate conclusion we must conclude that while it is possible for a hen to be so fat she cannot molt it is also possible for her, if she has the right amount of fat in her body, not only to molt but to manufacture eggs while she molts. Such cases may be comparatively rare, but I have seen so many in my small flock I am sure they must aggregate quite a large class.

Then there is the hen that rears a brood in late spring. How does this influence the molt? I have seen an Orpington hen that reared her brood in June go through an early molt in July and then lay steadily through the rest of the summer and fall. More often the hen that has had the rest and recuperation of hatching and brooding in the spring lays on without molting till late in the fall. If I could do as I like, I would set every hen on the place in May because I am so confident of the recuperative effect of hatching. We are told that while Leghorns are often productive three years heavy hens should be sent to the butcher at the end of the second, and this again is only a half truth. The heavy hen that is allowed to hatch every season should, if she is not permitted to get overfat, last longer than a Leghorn. Overfatness is, however a difficult thing to control.

These overfat hens should receive careful attention at culling time. The best thing that can be done with some of them is to eat them or can what you can't eat. Others may perhaps be reduced by cutting down the ration and giving all possible range. But no fat hen should be kept unless she can be reduced. She will go on eating long after she has ceased to lay. To be sure, there is no excuse for a hen's being overfat these days. It is unpatriotic, to say the least. But some hens, like some people, stay fat no matter how much they Hooverize. For such there is but one cure.

In looking over the flock, then, in September, let us weed out:

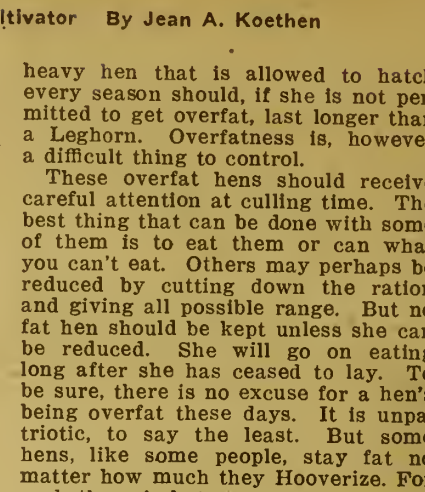
1. The early molter. That is, unless her comb, pelvic bones and behavior indicate positively that she is laying.

2. The overfat hen. Put her by herself and give her a chance to be good. If she still persists in being overfat, 'raus mit her.

3. The old hen. Dr. Woods says that under present conditions only breeders should be kept past the second year. It would be better to say, "Keep only the exceptional hen longer than two years" for a hen in her second year is a perfectly good breeder.

4. Any hen that is lacking in vigor or not fully up to the average of the flock.

In October or November we can cull by color, weeding out the hens that are glossy in plumage and yellow in shank and about the eye and vent. They are the hens that have been dressmaking instead of laying, unless they happen to be the exception that does both at once. But the wise poultryman, let us bear in mind, is the one who culls all the time. Helen Dow Whitaker, in her report of the All-Northwest Egg Laying contest says: "There are few flocks which will prove profitable unless they are culled," and this is the conclusion to which all thoughtful poultry people have come. Not only should the yearlings be culled, but the pullets from the start should be subject to the most rigid selection.



Eggs all through the MOULT!
SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).
For Hogs A-1 Hog Feed 10% dry buttermilk) will save from $6 to $12 on fattening each hog.
Fact Book for poultry and hog raisers sent free.

FERTILIZERS

Lime—Slaked. Corrects heavy sour soils quickly. H. B. Matthews, 495 Douglas St., Pasadena.

SOLIDARITY

Across the sea, from the Vosges to the plains of Flanders, American boys face the east—face the enemy—in defense.

They do not look back at us. They trust us, behind their backs, to do our part.

Our part is to work for war and not for self. Force, force to the uttermost, for them. Work, work to the uttermost, for us.—Dr. Alonzo Taylor, United States Food Administration.

The international sugar commission took stock of the sugar on hand, subtracted Allied requirements, and allotted America her share, then the food administration counted noses and announced two pounds per for our folks. Has anybody a better plan?

Aeolian Player Piano

The Best Player Value
At or Near the Price

$545

To those that can't play but want so much to play the Piano—what a blessing is the Player! But the higher types of Player instruments are often beyond the reach of the average pocketbook. This is where the Aeolian Player Piano fills a great need—it is a good substantial instrument yet moderate in price.

The Aeolian Player Piano does not depend on any single sensational feature to command attention—its excellence is due to a well balanced perfection throughout. It is a product of the Aeolian Company, makers of the famous Pianola and the wonderful Duo Art.

We will gladly arrange convenient terms if desired

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, etc.

THE SPEED BUG

When first I bought a motor car,
My mental status stood at par,
I had a sane, unquenched thirst
For axioms of Safety First.
No mad impulse arose to plead
That I indulge in bursts of speed,
But leisurely I journeyed then,
Exhaling peace, good will to men.

And when behind me siren notes
Announced accelerated boats,
I modestly gave way until
They passed and vanished o'er the hill.
Sardonic grins, their gibes and jeers,
Met shielded eyes and cottoned ears,
The while I slowly shook my head
And ruminated on the dead.

But scarce a month had spent its range
Ere I had undergone a change.
My reason faded, phantom-like,
And I was burning up the pike.
No placid gait consoles me now,
No docile rate the laws allow,
And when some driver tries to pass,
I open up and give her gas.

A deep respect for Safety First
Attends the miles in haste traversed,
But while my folly I deplore,
I know slow jaunts will serve no more.
So every motorist betrays
The sanity of early days,
The speed bug bites him on the pate
And he must needs accelerate.

—John B. Terns in Milestones.

CUPID, 1st; SAFTEY, 2d; TIME, :00¼

By Hugh S. Fullerton in Milestones

FERDIE MAYPOLE hated reckless automobile drivers, persons who laughed boisterously and used slang, persons with reddish hair and freckled faces, persons who really did not belong in the Clifton "set," and he loved Katherine (called "Betty" in that "set") La Clain. Jack McClurg hated no one, although professing contempt for persons who inherited much money, were too proper in dress, and who were afraid to drive a motor car faster than twenty miles an hour. Also he was desperately in love with Betty La Clain.

The enumeration of the likes and dislikes of the two really is unnecessary when it is understood that the things Ferdie hated were personified in Jack, and the qualities scorned by Jack were those which marked Ferdie as a man apart in the "set." Neither should it be necessary to explain further, that both loved Betty La Clain to make it understood why they should detect within themselves such violent antipathies.

Neither had evinced any particular feeling toward these qualities until it became evident in the "set" (it never was spoken of in any other way in Clifton) that each suddenly had discovered himself madly in love with Betty.

As for Betty herself, she adored fast automobiles, simply doted upon red-headed men, respected money, was perfectly mad over men who dressed well, and admired a man who obeyed the speed laws. She said all these things—which, far from satisfying either Ferdie or Jack, served only to aggravate their likes and dislikes.

The morning after Betty had spoken approval of those who are careful in operating their motor cars, and who obey the speed regulations, Ferdie called for her in his newest touring car. The fact that when he arrived Betty was arrayed in the motoring costume which only had been delivered late the preceding evening is not legal proof that she had hinted. As she gurgled into his ear several hours later, they had a perfectly gorgeous and completely scrumptious drive, and the cunningest and most scrumptious luncheon she ever had tasted in her whole life. Betty used italics at intervals through all her conversation. Ferdie drove downtown comforted for having lost the better part of the business day by her statement that she felt so safe with him because he was so careful.

It may or may not have been coincidence that, before Betty had the opportunity to change her costume, Jack's car slid to a screeching stop in front of her home and he honked the horn four times before she appeared.

"Hop in," he invited. "Let's step out and see what the birdies are do-40 miles up the river. There is a guy up that way I want to make take down a sign. He says 'Slow down to 60 miles.'" ¼

"I have just returned from a drive with Mr. Maypole," said Betty.

"Climb aboard," replied Jack, grinning. "A ride will do you good after a funeral."

Jack's car consisted chiefly of engine and tires. There was space enough between engine and tank for two persons to sit.

"You needn't look at the landscape for the first ten miles," remarked Jack. "You saw that today and there is a motorcycle cop who needs a pace-maker."

They went to where they were going, and were half way back when they passed the motorcycle policeman who had pursued them. Jack was elated when Betty assisted him in jeering at the farmer who dared place the sarcastic signboard at such a perfect piece of road. It was within a few moments after Betty had stated that she had had a perfectly heavenly drive that Jack's car overtook a car coming toward them. At least that is the way Jack expressed it, for, although the other car was proceeding Cliftonward at 20 miles an hour, it seemed to be backing up. Jack opened up his muffler, pressed the siren with his nose and went past the other car at a moderate 60, taking half the ditch as he went. In that instantaneous glimpse they saw that Ferdie was propelling the ash-cart, as Jack called it, and, worse, Ferdie recognized the occupants of that blue streak.

That really was the beginning of the likes and dislikes set forth earlier. Jack and Ferdie met at the garage. Their status in that establishment may be judged from the fact that the mechanician always touched his cap to Ferdie, and said: "Your car is ready, Mr. Maypole," while in addressing Jack he said: "Some job, Jack—some fast junk pile." The mode of address indicates the social elasticity of each.

"I'll buy you something wet," suggested Jack.

"Thanks,— I'm on the wagon," replied Ferdie.

"I thought you might need a quart or two of something to wash the dust out of your mouth," countered Jack, grining suggestively.

"I prefer a little dust to ditch mud," retorted Ferdie.

The retort stung, for it conveyed to Jack the fact that one, at least, in the "set" knew that his machine had been towed in ignominy from a muddy ditch during the preceding week.

"Were you running in reverse when I passed you?" queried Jack belligerently.

"No, I was saving a hundred and ten dollars by obeying the law," replied Ferdie, smiling savagely.

The final retort amounted to open declaration of a state of war. Until the words were uttered Jack supposed he had succeeded in concealing from everyone in the "set' 'the fact that he had been trapped at Milford, haled before a country justice and compelled to leave his watch and rings as security for the fine.

"When I hear these fellows talking Safety First," said Jack, addressing the garage man, "I usually conclude that they lack the nerve to go faster than 15 an hour."

The garage man, being diplomatically considerate of the fact that, while Jack's gas bill was the larger, Ferdie's account for washing and polishing more than offset it, remained silent until Ferdie walked out, then said: "Yeh bo, y' said somethin' that time."

Within a week everyone in the Clifton "set" understood that there was a coolness between Jack and Ferdie, and no Sherlockian instinct was needed for the majority opinion to reach the conclusion that Betty La Clain was involved. This conclusion was strengthened by the fact that Betty was seen alternately riding in reposeful comfort in Ferdie's car and scuttering along the horizon clinging to the platform between engine and tank of Jack's disreputable appearing machine.

On several occasions they passed each other on the road; rather, Jack did the passing. On such occasions as Jack was alone during this procedure, he grinned invitingly as he bolted toward the horizon. On occasions on which Betty sat beside him, he leered triumphantly and laughed. On two occasions he pretented to be examining his engine until Ferdie had passed, thus securing a second opportunity for triumphant grinning. On several other occasions it was painfully evident to Ferdie that Jack was

making a deliberate effort to lure him into a test of speed, challenging him to race by such tactics as holding the road at 12 miles an hour until Ferdie approached and forcing him either to attempt a passage or to accept the gait. Ferdie ignored these attempts and refused to alter his speed even a fraction of a second. Time and again he passed the low, dust-covered car, only to be smothered a minute or two later in a cloud of dust as he courteously yielded the road to the insistent honking of the pursuing horn.

Ferdie's jaw protruded a trifle more and his lips set themselves in a straighter line on such occasions, otherwise he maintained imperturbable countenance. True, his bow in return to the smile and the gay hand wave of Betty was a trifle chillier than his inward temperature appeared to justify.

Having failed to draw his rival by such methods, Jack resorted to an aggressive offensive, both during their chance meetings at social affairs and almost daily encounters at the garage. Ferdie was conscious that he was losing ground at all points. The garage man departed from his diplomatic attitude far enough to grin approvingly at Jack's jibes aimed at Ferdie's car.

The balm to Ferdie was that, up to a certain point in midsummer, Betty maintained anl attitude of remarkable neutrality. Each time that she rode with Ferdie she declared she had a perfectly gorgeous time, save on those occasions when she declared she had a perfectly gorgeous time, and the syllabetic accentuation carried convincingosity to Fredie, at least so long as the memory of the smile that accompanied it remained. It was in a midsummer drive that the blow fell. Never once during the numerous drives had the subject of speed been broached, Betty being amazingly diplomatic in some matters, and inclined to avoid afar off rather than evade at close range.

The subject arose during the homeward drive.

"Are you in a hurry to get back?" inquired Ferdie innocently, observing a trace of restlessness.

"No," she replied, "but a little motion might make it seem cooler."

They were going 21 then—one mile above Ferdie's maximum, and he flushed.

"Very well," he said tersely.

(Continued next week.)

HOUSEHOLD QUERIES

Substitutes for Sugar

Will you please tell me what substitute to use in ice cream in place of sugar? Honey is so high and furthermore I don't think that flavor would be very good in cream. In the part that I cook I add white karo syrup, which may be of benefit to some one else, but in the remainder I use sugar, and under present circumstances I cannot. Also what substitute can be used instead of sugar in cocoa? — Subscriber, Delano.

Does anybody know of any other substitute for sugar than honey, corn and sorghum syrups? Of course there is maple sugar, and lately in some places corn sugar has been obtainable. (This latter is not so sweet as cane or beet sugar). Honey is delicious in ice cream. In fact, many ice cream makers built up a reputation for the excellence of their product, before we ever thought of economizing on sugar, by advertising that their ice cream was made with honey. Of course the high price will keep it from being generally used. If any of our housekeepers have suggestions to offer, we will be glad to hear from them and will give a six months' extension of subscription for any suggestions published.

THE SLACKER'S PRAYER

Call out the army and the navy,
Call out the rank and file,
Call out the brave old veterans,
They'll face danger with a smile.
Where are the boys of the old brigade
That set old U. S. free?
Call out my mother, my sister, my brother,
But for God's sake don't call me.
—Exchange.

The nation's standard in clothes of moderate price

Styleplus are the only clothes in America identified each season at nationally known prices.

Each Styleplus grade is one price the nation over.

We center our volume on a few grades—cut down the expense of manufacturing—this is the reason behind the famous Styleplus quality.

No matter where,—no matter when—you buy Styleplus Clothes you *know* they are right in style, in wear, and in price.

Go to the Styleplus Store and see for yourself. Try on the clothes. Get exactly the kind that suits your build and your taste—that fit right and look well.

When you see your clothes before you buy them you know what you are getting. Buy Styleplus and you will always be sure of the big value at a moderate price.

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AB) for Styleplus booklet and name of local dealer.

Shotguns and Shotshells
for Shooting Right

GETTING the bulge on your year's work means a lot—a lot more if you love dog and gun. By getting yourself in trim with the *right* amount and kind of recreation, you will tackle next year's work with more vim.

There is much additional satisfaction in store for you if you buy a Remington UMC Pump Gun or Autoloading Shotgun for your days off this Fall. When your well earned chance comes to bag some game, you will then have in your hands a gun made to shoot *right*. Guns of the same design helped win the Grand Prize, highest of possible honors, "For Modern Firearms and Ammunition," awarded to Remington UMC at the San Francisco Exposition.

The wonderful Wetproof process invented for and exclusively used in the manufacture of Remington UMC Smokeless "Arrow" and "Nitro Club" Steel Lined Shotshells, has been pronounced the greatest advance in shotshell manufacture in a decade. *These shells as now made are the first completely wetproof shells.* Another Remington UMC contribution to shooting *right*.

In *black powder*, buy the old reliable Remington UMC "New Club," now Wetproof sealed at turnover and top wad.

Beeswax	32@34

HAY

Under date of August 31, Scott, Magner & Miller says:

Receipts past week, 1794 tons. As has been the case for some weeks past, a good portion of this hay arrived by water and considerable of it consisted of alfalfa.

Although these receipts are not heavy for the month of August, at the same time the market is well stocked and has been for some time past. This condition is no doubt caused by the elimination of the horse to a great extent in many lines that formerly depended upon that exclusively.

The government was in the market during the week for some export hay but; other than this, export demand is light.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling must be added according to conditions:

Fancy Wheat Hay (large 5 wire bale)	26.00@27.00
No. 1 Wheat or Wheat and Oat Hay	23.00@25.00
No. 2 Wheat or Wheat and Oat Hay	20.00@22.00
Choice Tame Oat Hay	24.00@26.00
Other Tame Oat Hay	21.00@23.00
Wild Oat Hay	19.00@23.00
Barley Hay	19.00@23.00
Alfalfa, first cutting	16.00@20.00
Alfalfa, second cutting	22.00@24.00
Stock Hay	18.00@21.00
No. 1 Barley Straw, bale	50@80

GRAIN AND FEED STUFFS

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard white—	Per cental.
No. 1	3.66⅝
No. 2	3.61⅝
No. 3	3.55
Soft white—	
No. 1	3.63⅜
No. 2	3.58 1-3
No. 3	3.51 2-3
Club and Sonora—	
No. 1	3.60
No. 2	3.55
No. 3	3.48 1-3

For sacked grain add 9 cents per bushel of 60 pounds to above prices. Deduction of three-fourths of a pound is made for weight of standard grain bag. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to its merit.

Barley — No. 1 feed, 2.37½@2.45 per cental; milling, 2.55@2.60.

Oats — Red feed, 2.55@2.65 per cental for ordinary and 2.75@2.85 for choice; seed do, 2.90@3.10, with recleaned at 3.20 @3.40; black, 2.50@2.65 for feed and 3.00 @3.25 for seed; do. recleaned, 3.50@3.75.

SEEDS

Prices in round lots, lb.:

Millet, recleaned	5@5½
Flax	8@8½
Hemp	5½@6
Rape	2½@5

Food saving must go right on. We haven't yet made up the deficit of Europe or built up our own reserves —success lies in reserves.

BEEKEEPERS — WATCH FOR EUROPEAN FOULBROOD

European foulbrood, a disease of brood of bees which has caused great losses to American beekeepers is often confused with American foulbrood, though it is a distinct disease and requires different methods of treatment.

Symptoms of European foulbrood are variable, color being perhaps the most constant symptom. The earliest indications of the disease are a slight yellow or gray discoloration, and the uneasy movement of the larva in the cell. As the decay of the infected cells proceeds the color changes to a decided yellow or gray. A symptom of the greatest importance is the fact that the disease attacks drone and queen larvae nearly as quickly as those of the workers. The disease is very infectious at times, but it weakens rather than kills the colonies. If the colony is strong it can usually withstand an attack of European foulbrood, and will clean up the diseased cells. But where the disease is persistent, and the bees are not able to ward it off, the beekeeper should remove the queen and strengthen the colony by combining the bees from two hives, and after all trace of disease has disappeared give the colony a young vigorous Italian queen of resistent stock. A queen whose colony becomes badly infected is rarely of any value and should be killed.

WILLIE AND THE GOAT

"When the Germans reproach the Belgians," said Colonel House at a luncheon in New York, "when the Germans talk about guarantees against Belgian aggression, I am strongly reminded of little Willie.

"Little Willie ran howling with rage to his mamma.

"'That goat butted me!' he roared. 'The bad goat butted me in the stomach.'

"'Are you sure you weren't teasing it?' his mamma asked.

"'No, no,' wailed Willie. 'What would I tease it for? I was only just carvin' my name on its back with my new penknife.'"—Washington Star.

ANOTHER MOLLYCODDLE

"Do you play football?"

"N-no—that's too rough."

"Do you play baseball?"

"N-no—that's too exciting."

"Well, mebbe you tackle lawn tennis?"

"I have a weak heart."

"Rowing?"

"Too dangerous."

"Well, for the Lord's sake, as you never play, what do you do in the way of work?"

"I—I work in a powder factory."—Florida Times-Union.

HORSE TOO EXPENSIVE

Physical culture was the topic being talked in a Washington club when Senator J. Hamilton Lewis of Illinois said he was reminded of the view that was taken in that connection by a man named Jones.

One day Jones was complaining that he was not feeling as fit as usual, and a friend suggested that he go in for exercise.

"There's horseback riding, for instance," said the friend. "It is one of the best forms of exercise on earth."

"I know," was the doubtful rejoinder, "but I am afraid I couldn't afford it."

"Can't afford it!" wonderingly exclaimed the other. "You already have a horse, and just think of the appetite it will give you."

"Yes," responded Jones with a sigh, "and just think of the appetite it will give the horse."—Philadelphia Telegraph.

WHY, OH WHY!

The coal supply is getting shy,
And fierce will be the wintry clime.
Then, pretty, lady, why, oh, why,
Wear out your furs in summer time?

We are giving our work, our time and our money, but "They" are giving their lives.

WEATHER CONDITIONS

San Francisco, Cal., August 31, 1918.

Second Hand Building Material

80000 ft. Choice Gal. Corrugated Iron, good Straight Lengths

3,000,000 ft. Dry Dimension Lumber

New A grade guaranteed Plumbing, large purchases made prior to recent advances. Everything for the construction of a frame building. Get our money saving Estimates. Satisfaction Guaranteed.

Symon Bros. Wreckers

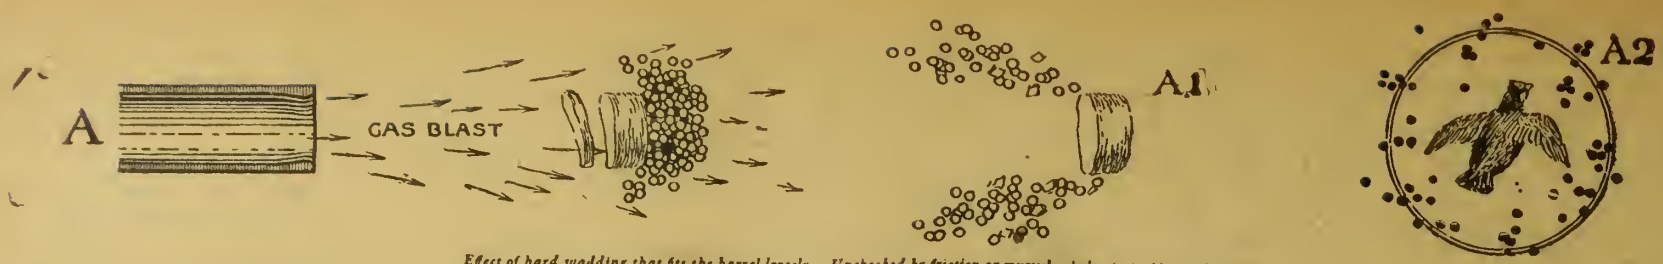
Block 11th & Market Sts., San Francisco

WORK A SINGLE DAY in one of these comfort-giving, convenient, economical suits and you will discard old-fashioned work clothing forever. **LEE UNION-ALLS** are fully constructed trousers—therefore it is not necessary to wear them over other trousers. **LEE-UNION-ALLS** are a fully constructed double pocket shirt—therefore it is not necessary to wear them over another shirt. **LEE UNION-ALLS** are a complete coat—therefore it is not necessary to wear an extra coat.

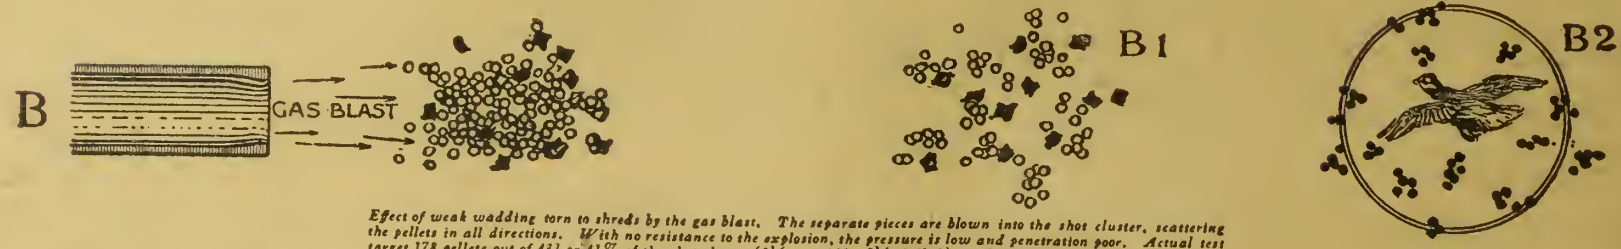
But don't be taken in by imitations, substitutes or "just as good." Insist on **LEE UNION-ALLS,** the garment that wears longest and fits best. Made of blue denim, khaki, Stifel stripe or Hickory stripe. If your dealer does not supply you, we will send your size direct. Write for descriptive booklet, telling us your chest measurement and material desired.

THE H. D. LEE MERCANTILE COMPANY

Kansas City, Mo. Kansas City, Kas. South Bend, Ind. Trenton, N. J.



Effect of hard wadding that fits the barrel loosely. Unchecked by friction or muzzle choke, it is blown through the shot cluster, scattering the shot charge. Actual test target, 221 pellets out of 431 or 51% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-in. circle at 40 yds



Effect of weak wadding torn to shreds by the gas blast. The separate pieces are blown into the shot cluster, scattering the pellets in all directions. With no resistance to the explosion, the pressure is low and penetration poor. Actual test target 178 pellete out of 431 or 41% of the shot charge (1¼ oz. of No. 7½ chilled) inside a 30-in. circle at 40 yds

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where it is checked by the "choke" or constriction. Shot cluster travels on ahead unbroken. Actual test target, 320 pellets out of 431, or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-in. circle at 40 yds

Effect of wadding construction on shot patterns

Poor wadding responsible for more faulty patterns and lost birds than all other gun and shell troubles combined

A strong uniform shot pattern depends upon how perfectly the *wadding* in your shells controls the five-ton gas blast behind it.

The wadding, like the piston head of a gas engine, must give the explosion something solid to work against so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The illustrations at the top of this page show actual test patterns, 50% to 70% faulty, the result of poor wadding.

The Winchester system

Winchester wadding is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work. Though the explosion is almost instantaneous, it is none the less *Progressive,* the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle*, where it is most needed.

Meanwhile, under the heat of combustion, the tough, springy Winchester *Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* up the shot evenly.

At the muzzle the shot pellets slip out without jamming, while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard hitting, uniform pattern for which Winchester shot shells are world famous.

Fish Tail Flash All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.

The Crimp The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

Water-proofing and Lubrication In the cold, damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester water-proofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and "splitting" in dry weather.

Uniform Shells From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. $100,000 is spent annually in the inspection and testing of finished shot shells. 25,000,000 rounds of ammunition are fired every year in testing guns and ammunition.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps, be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. XX-11 New Haven, Conn.**

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

This is tractor week. In fact, the Cultivator is acting as the meat in the sandwich this week. Last week was state fair week, and the greatest feature at the fair was the display of tractors and farm implements. A taste of that exhibit is given on our cover and further described on Page 5. The event next week is the demonstration. The Cultivator's camera will also be there and, so far as the dust will permit, will make graphic report for our readers.

THE GREAT SUMMONS

Thursday of this week will prove one of the great days of history. It is expected that final tabulation will show approximately thirteen million of American men have responded to the summons to register for service to answer the German challenge, might makes right.

America was desperately slow in entering the war but once in she is coming with overwhelming power.

Perhaps, Kaiser Bill, her might may right, so far as possible, some of your awful wrongs.

NOT ALL BEER AND SKITTLES

The hop growers of the northern Sacramento Valley are up in arms because the tobacco industry seems to be working the present war condition for an enormous amount of free advertising and greatly increased consumption, while hops are taboo. A northern paper reports:

"The hop growers will declare that the lands now used in growing tobacco should be devoted to growing wheat. In this way it is expected to force the tobacco growers to make common cause with the brewing advocates."

The hop men hope to be joined by the barley growers as well. The fight is to be carried to Washington.

FILE COMPLAINTS

George C. Roeding, president of the state board of agriculture, and hence at the head of the board of directors of the state fair, has closed his first year in office. President Roeding is not one of the thin-skinned variety that wants to be fed on sugar-coated morsels, but goes out and frankly asks, "What are our faults?" The exhibitors at the recent state fair were somewhat surprised when President Roeding appeared with stenographer at his elbow and remarked: "Boys, the fair is nearly over. Naturally you have some kicks coming. What are they?" The president promised nothing for the board of directors, other than that every complaint would be properly filed and where possible requests for changes in details of future fair management would be granted.

We have attended the fair for many years and do not think we have ever heard so little complaint as this year. Of course, much of this improvement comes from the lessons of each of the former years, but the attitude of the board in seeking further for improvements is to be commended. There are some features, for instance, the separating of the dairy classes, some being at one end of the ground and others more than a half a mile away, which have caused serious complaint for years. We know that change of this particular feature is under advisement.

Generally, there was less of the spectacular this year and more attention given to such features as make for a great agricultural fair.

STANDARDIZE

Unfortunately a vast number of exhibits at the agricultural fair receive only a passing glance. These are often worth at least a moment's—or an hour's—study, if one would go home from the fair with fullest information. One such was in the exhibit of the state horticultural commission in the new horticultural building at the state fair.

The first glance at this exhibit gave a distinct shock. This building was filled with peaches that were peaches and nuts, perfect in appearance, uniform in size, pears, and in fact, all other kinds of fruits, displayed in perfect commercial pack and on single plates. But the exhibit to which we have referred in the standardization booth of the state horticultural commission was of gnarled, scabby, wormy, under and over sized apples and other fruits. Why this exhibit of these fruits, with perfection on all sides? The attendants explained: "These fruits and many others in this booth are exactly as some shippers have packed them for shipment to Eastern customers. They have been caught by our inspectors before loading, condemned, and are here exhibited as an awful example."

Many a Californian who takes pride in the products and in the good name of the state were most indignant at the sight presented in this booth. The exhibit made will strengthen the hands of the inspectors who have the responsibility of enforcing our state fruit standardization law.

FISH PRICES

With the ocean full of healthful foods for the human race there is no reason, not even an excuse, for fresh fish prices which are maintained on the Pacific Coast. Perhaps the suggestion has no value, but it might be well for each of us to take our hook and line and replenish our own larder. This reminds us that here is an opportunity for the state fish and game commission which has been accused of being about the most expensive and useless of the commissions in the state. It might well at such a time as this abolish hunter's and fisher's licenses.

GO TO COLLEGE

The war department has started a new drive. It is termed the "Go to College Drive." The people of the United States should recognize that the maintenance of the war strength of the nation in its full power demands the utmost efforts of all existing well organized and adequately equipped colleges, universities, and technical schools. This means ever increasing and more devoted bodies of students as well as faculties.

Young people having the requisite qualifications should heed this urgent call of their country and apply themselves diligently, enthusiastically, and in increasing numbers to the task of preparing for the highest service of which they are capable. Wherever practicable young men should at the same time join the students' enlisted reserve and prepare for military service in order to be ready for that call also when it comes.

America has astonished the world in its raising and equipping of a great army. We all felt at first that the "haste" we were making was desperately slow, but owing to the quality of the timber the war department could command in the making of this army the little over a year of time has placed a better equipped army in the field than 40 years of training and preparation with lower quality of material would have made possible. This truth is so fully realized that the department of war is wise in encouraging the best of education for the young men at home. When peace comes and remains we will be all the better fitted for its problems.

USE EFFICIENT MACHINERY

Farm implements should be as large as the farm and conditions will allow. Why should a strong man operate a two-horse team and one plow bottom, when he might as well drive a tractor or four or six horses on a gang plow and accomplish twice or three times as much labor? With the present high price of labor and feed and the relatively low price of good machinery and the excellent prospect for high prices of farm products, there is no excuse for the one-horse, low gear farming characteristic of some farms and localities.

This Week's War Notes

An I. W. W. bomb explosion in Chicago killed three.

Pershing's casualty list is increasing almost daily, some days now reaching close up to 1,000.

The ninth German loan is announced for September 23. The bonds will bear five per cent and are issued at 98.

Secretary of War Baker and John D. Ryan director of air service, are in France investigating as to the American airplane situation.

A treaty of alliance has been concluded between Germany and Finland, under which the entire man-power of Finland is put at Germany's disposal.

The American Trans-Atlantic Company has had all of its ships and property commandeered by the shipping board on the ground that it was owned by Germans.

American shipyards turned out 66 vessels during the month of August. Forty-four of these were of steel; others of wood. It is thought the year's production will exceed 2,000,000 tons.

The war time prohibition bill is nearing passage, and it is expected it will make prohibition effective July 1, 1919. The administration has ruled that no more beer shall be manufactured after December 1.

Geneva reports that German Great General Headquarters has been moved out of Belgium, two special trains being required to carry away the documents. It is thought the new headquarters will be at Bonn, Germany.

Accurate information regarding German losses since March 21 indicates that killed, wounded and prisoners total at least 1,100,000. It is estimated that practically half of this number were killed, permanently disabled or taken prisoner.

The Turks are becoming restive, and it is rumored a large force has been sent to the Bulgarian border, and it is possible the armies of the Central Powers may yet be fighting each other. The Turks claim the Bulgarians have been seizing Turkish territory.

Thursday of this week was registration day. It was made a legal holiday and there were approximately 13,000,000 registrations. Gen Crowder announces that the first call will include men of 19 and 20 years and 31 to 36 years, inclusive. When the men of those ages have been called, then the boys of 18 and men of 37 to 45 will be called, it is expected, early in 1919.

Field Marshal Haig has issued a statement to his armies, commending them for glorious accomplishment at the critical moment when the English armies were almost broken by the enemy's assault, for the fact that they are everywhere today advancing victoriously, for the capture of 75,000 troops and 750 large guns, and assuring them that the war's crucial period is now ended for the Allies.

How many American troops have been landed at Archangel is not announced but it is known that the number is considerable and that the Allied troops are gradually marching southward. Little information can be had as to the situation in Siberia, as utter chaos prevails, though information secured from Tokio indicates demoralization of the Bolshevik troops. Lenine was shot by a loyalist but is still alive.

Reports from Berne, Switzerland, indicate serious riots in Vienna as Austrian troops were entrained for the west front to help the Germans in repelling the Allied offensive. Thousands of angry women mobbed the railway stations, shouting "Down with Germany!" and protesting against the taking of Austrian soldiers to protect Berlin. Mutinies amongst the Austrian troops of other sections have been general.

The Belgian army has finally been given permission to take its turn at the hated Hun, and on Belgian soil began a surprise smash on Tuesday forenoon that tore through the Hun trenches for a depth of more than a mile on a three mile front, taking three villages. The Belgians were rewarded by the capture of a large number of prisoners, also of machine guns and large guns. This was all north of Ypres. South of Ypres the British, the French and the Americans, in some sections fighting together and in others as individual armies, are pressing back the Germans and Austrians at every point. Gen. Foch apparently proposes to make his pressure continuous and "fight it out on this line" if it takes several summers. In fact, it is definitely announced that the Allies propose to continue with the pressure the winter through. The Germans have been forced back to the Hindenburg line at many points and possibly before these words are read may be still nearer the Rhine. The Germans are burning and destroying everything as they retire.

Artillery of Agriculture

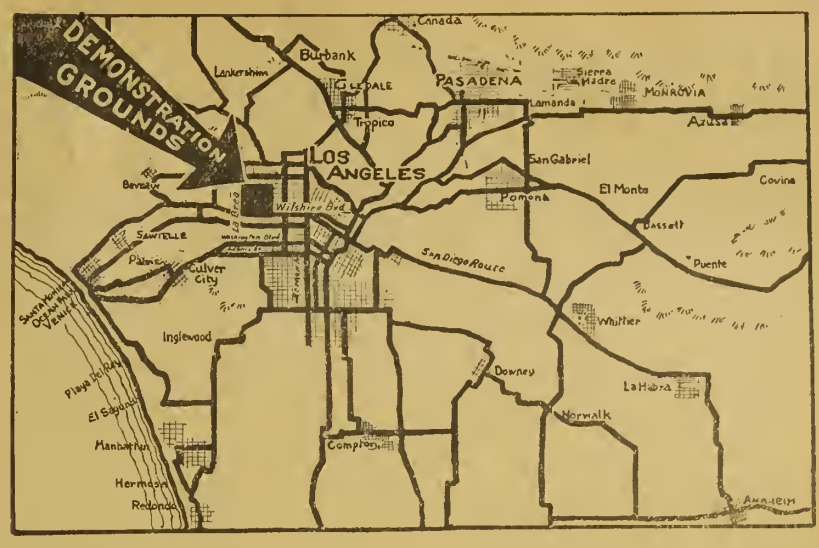
SECRETARY HOUSTON of the United States department of agriculture terms farm machinery, farm power, and especially tractors, the "Artillery of Agriculture." Artillery of war requires large outlay of cash but conserves the lives of soldiers. The artillery of agriculture is expensive to install but conserves labor and makes possible production demanded when the nation's men are required in overseas service.

Besides the economy item, from the farmer's standpoint there is another consideration which affects us nationally. For weeks there have been shipments of mules from American ports at the rate of 5000 animals daily. With the burden of feeding the world increasing day by day, this shipment of farm power would cause consternation were it not for the farm tractor, the farm truck, the trailer and improved power implements. Fortunately the farmer has opened his eyes and sees the necessity for using this new farm power. He is aided in getting the information required by exhibits at fairs and demonstrations in the open field.

California has just closed her most successful fair from the standpoint of tractors and implements. She is just ready to open to the inquirer her greatest demonstration.

This demonstration has been announced several times in the columns of the Cultivator to take place on the Whittier Boulevard east of Los Angeles. But a change of location has been made, and the demonstration will now be held on a much larger tract between Los Angeles and Santa Monica. In fact, the tract is 500 acres, and at this moment huge tents are being erected, with smaller temporary buildings containing rest rooms, telephone booths, restaurants, refreshment rooms and other accommodations. Parties going to the demonstration by auto, follow out Wilshire Boulevard. Free parking space is provided. Auto bus will meet the Sherman or Colegrove Santa Monica car at Brea Station.

Private demonstrations and exhibits will open at 8 o'clock every morning from Tuesday, September 17, to Saturday the 21st. The private demonstration feature will fill the forenoons, while the general public demonstration will occupy most of the time in the afternoon.



WHAT THE EXHIBITORS WILL DISPLAY

Over 100 tractor, farm implement and ranch accessory exhibitors have taken large space at the tractor demonstration and the displays this year will reveal many interesting features.

Arnott & Co., in tent 80 by 100, grain drills, bean drills, Buckeye, cultivators, plows, threshing machines, beet pullers, hay presses, Dreadnaught tires.

A. B. C. Oil Co., complete line of oil, special grades for tractors.

A. H. Averill Manufacturing Co., the Russell tractor.

American Engine and Aeroplane Co., samples of piston work, cylinder grinding, etc.

F. T. Briles, Cleveland tractors, all 12-20's; five sizes of Schmeiser land levelers, model D. Bates Steel Mules, Brennis cultivators and sub-soilers.

C. L. Best Gas Traction Co., three sizes of the Best tractor.

Barney Oldfield Tire Co., various methods of tire repairing, etc.

Belt Rail Tractor Co., the Belt Rail tractor, disc harrows, goose neck cultivator, P. & O. and Oliver plows.

Bean Spray Pump Co., Bean Track Pull tractor, spray pumps and outfits, and irrigating pumps.

E. P. Bosbyshell Co., farm implements, Rock Island tractor tools and Heider tractors.

W. J. Burt Motor Car Co., Bear Cat tractors and Auburn automobiles.

Clark & Wells, cylinder grinding.

J. I. Case Threshing Machine Co., Case 9-18 and 10-20 tractor; threshing machines and road graders.

California Moline Plow Co., immense plows, harrows, grain drillers, grain binders, mowing machines and disc harrows.

Chevrolet Motor Co., one ton truck and several small commercial cars.

Sam C. Carter, Lauson tractors.

W. L. Cleveland Co., Monarch tractors, Waterloo Boy Model N, plows, discs, harrows, Cleveland special cotton and corn cultivators, cut down cylinders and motors.

Dauch Manufacturing Co., Sandusky tractors.

Delco Ignition and Lighting Co., exhibit embodying many electrical appliances and devices, including complete lighting and generating plants, electric washing machines.

Dixon & Griswold, P. & O. plows of all sizes, cultivators, discs.

Denby trucks exhibited by H. G. Pendell.

Ensign Carburetor Co., carburetors.

Fairbanks Morse Co., irrigation machinery, silo cutters, feed mills, electric motors, scales and gas engines.

Fageol Truck and Tractor Co., Fageol 9-18 Walking tractor.

Garford Truck Co., trucks of various capacities.

A. F. George, John Deere Plow Company's line and Yuba tractors, mould board, disc plows and Hardie sprayers.

Hauser Packing Co., fertilizers, etc.

Homer-Laughlin Co., transplanter and Little Husky tractor.

Harron, Rickard & McCone, Wade Drag Saw, operated by power and farm hardware.

H. Hayman & Co., International Harvesters, Oliver plows, Planet Jrs., International Titan tractors, tillage tools, Roderick Lean disc harrows, and McCormick tools.

Holt Manufacturing Co., two 75 and two 45 caterpillar tractors, caterpillar land levelers, discs and plows.

Killefer Manufacturing Co., 32 tractor implements, automatic lift subsoilers, gang plows, and double disc harrows.

Klieber Motor Truck Co., two and three and one-half ton trucks.

Keaton Tire Co., tires and tire accessories.

F. E. and W. F. Keyes, oil burners.

L. A. Auto Tractor Co., Little Bear tractors and Best tractor.

Moreland Truck Co., distillate burning truck chassis, and four ton truck.

Motors Equipment and Tractor Co., Beeman Garden tractor.

McFie Supply Company, blacksmith equipment for repairing of tractor tools.

J. A. Masterson & Co., ball bearings.

Monomobile Oil Co., oils.

National Automotive School, display of demonstration equipment used in its school and head instructors will give free lectures daily during the show.

Norwalk Tire Co., and Lichtenberger-Ferguson Co., Norwalk tires and tubes.

Nelson & Price, tires.

Puente Oil Co., tractor and automobile oils.

F. H. Poss Co., Avery tractors.

Panama Lubricants Co., Pennzoil line of lubricants.

Republic Tractor and Truck Co., tractor.

Miss Marie L. Rimpan, ditcher.

Splitdorf Electrical Co., magnetos, spark plugs.

Samson Sales Co., G. M. C. tractors.

Standard Oil Co., oils.

Strong & Turner, oil burners.

Service Truck Co., trucks.

Smale & Waterbury, Nilson Senior and Nilson Junior tractors.

L. Sonneborn Sons, Amalie lubricants.

Smith-Booth-Usher Co., irrigation appliances.

U. S. Spring Co., springs.

Union Oil Co., oils, greases and engine fuels.

William L. Hughson, Fordson tractor.

Woodward Truck Co., Ford truck attachments.

William Gregory, Trundaar and Lambert tractors.

Continued on Page 258

Exhibits of Tractors and Farm Appliances at State Fair, Sacramento

At the left: One of the newer ones, the Nilson; this exhibit made attractive by partial dismantling to show ease of reaching all parts. The center picture shows the ease with which the farm buildings may be lighted by use of the Lalley Light. The Bear Cat, "strong as a bear and quick as a cat".

The California State Fair Brought Together a Most Complete Exhibition of Farm Implements and Farm Power

Only about half of the J. I. Case string of tractors in the big fair tent is shown in the above illustration. Center view is from an entirely different section of the grounds and is an exhibit of the Calf-Way Milker. At the right are the Titan and other tractors of the International Harvester exhibit.

Agricultural News Notes of the Pacific Coast

Northern California

Grass Valley is now sending out heavy shipments of Bartlett pears.

Bean growers of the Sutter Basin have united in a grasshopper fight.

The Soda Canyon farm center has decided to exhibit at the Napa County fair.

An olive grower at Woodland reports sale of his crop at 17½ cents a pound.

Sutter County's grape harvest has begun. Thirty dollars per ton is the usual price.

Northern California's orange crop is not expected to be any heavier than last season.

Meridian and Live Oak districts of Sutter County report big yields of all crops this year.

The Humboldt County farm bureau will hold its annual meeting at Fortuna late this month.

The government has ruled that all boxes used for raisin shipments must be bound with strap iron.

All the grain on the great 20,000 acre ranch of Moreing Brothers in the Natomas district is being handled in bulk.

Rice growers are endeavoring to secure early maturing varieties, and for this purpose are investigating in the Philippines.

Humboldt County's 23rd annual exposition was held at Ferndale August 21-24. There was an especially heavy exhibit of live stock.

H. E. Wahlberg who has been acting horticultural commissioner of Glenn County has been named farm adviser of Orange County.

The county farm adviser of Napa County announces that he has more help registered for prune picking than he is able to find positions for.

The warehouse of the Sutter County Almond Growers' Association at Yuba City is now open for receipt of almonds. The crop is light this year.

Placer County farm center meetings will be held at Bowman, September 8; Long Valley, 21; Roseville, 23; Colfax, 25; Mt. Vernon, 28. These are all night meetings, beginning at 8 o'clock.

Local farm center meetings will be held in Glenn County during September; Bayliss, 6; Codora, 9; Orland, 11; Jacinto, 13; Willows, 16; Millsap-Millville, 18; Plaza, 20; Grapevine, 25; Elk Creek, 25; 2:00 p. m.; Larkin, 27.

Farmers of Ord, Glenn County, have completed plans for building an elevator of 15,000 sack capacity. The grain belonging to farmers erecting the elevator will be handled in bulk through the elevator this season although it will not be completed.

Great preparations are being made for the Pacific Coast Land and Industrial Exposition at San Francisco from September 9 to October 6. The state university will have a large exhibit showing the work it is doing in drilling young men for technical service in the army.

The state is making arrangements for a rolling tractor school which is expected to be in operation early in December. It is expected to have four of five units for the state. The course of instruction will occupy 24 days. Half of the expense will be borne by the state emergency fund and half by schools in the locality where instruction is given.

Central California

Malagas are bringing good prices in Eastern markets.

Kern County's rice fields are said to be in excellent condition.

San Joaquin Valley expects to have a $20,000,000 crop of raisins.

Turlock makes its heaviest shipment of melons to Chicago.

Porterville reports little need for fumigation work in its groves this year.

Almond shells are being shipped to New York for use in making gas masks.

Cool weather in the San Joaquin Valley is holding back the maturing of Malagas.

The Visalia high school has arranged to give a course in tractor management this fall.

Several mountain fires have been reported, circumstances pointing to incendiary origin.

A ruling has been made that irrigation taxes may be exempted from federal income tax.

The Kearny Farm of the state university near Fresno expects to have 1000 tons of raisin grapes.

The Visalia high school will offer a tractor course September 23 to 28. Nine or ten tractors will be on the grounds.

Kern County pear orchards show fruit ripening very rapidly. Two carloads a day are being sent from Tehachapi.

The British government has purchased over a half million dollars worth of raisins from the Associated Raisin Company.

Fires which destroyed canning and dried fruit plants at Hanford and other fires at Fresno are being openly charged to I. W. W.'s.

Reclamation work has been started on district number 1064 east of Patterson, Stanislaus County. Some 5000 acres will be reclaimed.

State Superintendent of Weights and Measures Johnson says that dirt must be kept out of the baled hay; if not arrests will follow.

An expert of the United States bureau of entomology has been sent to Dinuba to devise some measure of control of the mealy bug pest which has become serious.

The California Peach Growers on one day last week shipped eight carloads of peach pits to army gas mask factories in San Francisco. The government pays growers $7.00 per ton and accepts delivery in boxes or containers of any kind.

The farm bureaus of Fresno, Tulare, Kings, and Kern Counties are considering plans for cooperative marketing of their livestock. A committee appointed to investigate ways and means will report to a joint meeting of the bureau today.

A branch of the federal bereau of markets has been established in Fresno. E. W. Stillwell will be in charge. Market quotations on San Joaquin Valley products will be received and dispatched to all who are interested in the service each day.

The Southern California Edison Company has petitioned the state water commission for permission to divert 120 cubic feet per second of waters of Pitman Creek for storage in Huntington Lake and 3781 acre-feet per annum for storage in Pitman Creek reservoir.

Southern California

Brawley reports the opening of a new cotton gin.

Simi, Ventura County, is threshing a big bean crop.

Elsinore canneries expect to begin soon on tomatoes.

The Oxnard Citrus Association has formally incorporated.

The Santa Maria Valley bean warehouse has been completed.

Walnuts in the Lankershim district show no damage from sunburn.

The Oxnard sugar factory has put in some women weighmasters.

Valencias are still bringing big prices in the Eastern markets.

Ventura County has 90,000 acres in beans valued at over $12,000,000.

Wine grape growers of San Bernardino County are getting $30 a ton.

Walnuts are ready for harvest in the Tustin district of Orange County.

One hundred and twenty acres are being planted to broom corn in Victor Valley.

The new packing house of the Irvine Walnut Association is ready for business.

There will be a monster tractor demonstration at Los Angeles, September 17-21.

Riverside County is planning to exhibit at the Liberty Fair to be held in Los Angeles in October.

The Oxnard sugar factory is slicing beets from the Chino, San Fernando, and Ventura districts.

Southern San Diego County had a rainstorm last week. Lakeside reports a fall of 1.4 inches.

Santa Ana walnut growers have found plenty of help available without calling on the Women's Land Army.

At the last meeting of the El Cajon farm bureau center topics of discussion were handling of winter vegetable crops.

Many Imperial Valley stock breeders are planning exhibits at the Liberty Fair to be held in Los Angeles, October 12-26.

Bean growers of Riverside County met at Riverside last Monday to hear Manager Churchill discuss the marketing situation.

Experts from the citrus experiment station have been giving demonstrations in scaly bark control in various orchard districts.

Orange County walnut growers are paying $1.25 per hundred for shaking and picking. This is equavilent to 75 cents per sewed barley sack.

A price of $22 to $25 a ton for polling and picking walnuts has been fixed by the wage committee of the Ventura County farm bureau.

Many Ventura County fruit ranchers are said to be breaking over the wage scale adopted by the farm bureau, paying more for extra help for short time work.

The California Lima Bean Growers' Association urges all its members to have their fields gleaned this year on a per day or a per pound basis instead of on shares.

The new cannery at El Cajon, San Diego County, has been unable to operate continuously because of scarcity of help. The grape men are paying 50 cents an hour for pickers and the cannery men cannot meet that price.

The Coast and General

Oregon holds her state fair at Salem, September 23-28.

The Oregon Interstate fair will be held October 1-5 at Prineville.

The Rogue River Valley of Oregon has shipped out most of its pear crop.

The campaign for the Fourth Liberty Loan begins September 8 and closes October 19.

Bounties amounting to $1077 were recently paid to a Clatsop County man for 359 sealion scalps.

Sugar beet farmers of Ontario, Canada, have secured Mexican labor and have found it very satisfactory.

Arizona cotton growers have found a poison for boll weevil which it is hoped will control the pest next year.

Washington's 1918 wheat crop will total 30,000,000 bushels. This is an increase of 3,000,000 bushels over last year's yield.

Manager McCullagh of the Hood River Apple Growers' Association estimates the pear crop in that section at 75 carloads.

A short course in the handling of farm tractors will be held by the University of Idaho for two weeks next January.

All wheatless days and meals for America are abolished, but bread will be made from "Victory flour" containing 80 per cent wheat.

Idaho's farm market director urges dairymen to buy what hay they will need for the winter immediately, before prices soar any higher.

Stock men of the Inland Empire have formed an association with headquarters at Spokane. E. E. Flood has been elected secretary-treasurer.

As olive oil is considered a necessity in Portugal, and the coming crop is not adequate for local needs, the government has prohibited its export.

The war industries board announces agreement with manufacturers of passenger autos whereby their output for the last half of 1918 will be cut to one-fourth that of 1917.

Seattle's shipyards were suffering from shortage of unskilled labor but the need has been met by the volunteering of citizens of all walks of life from the mayor down. Business men are contracting to work for from 30 to 60 days.

The entire output of all factories making soluble coffee in the United States has been bought up by the government for the use of our soldiers in front line trenches. When hot water is not available the boys can make coffee by mixing with cold water.

An automobile trailer, fully equipped with chemical tanks and other firefighting apparatus, is being maintained by the Pullman, Washington, chamber of commerce during the harvest season for fighting grain and farm fires in that vicinity. A volunteer firefighting force of 15 men has been organized.

A second shipment of foxglove, 850 pounds—enough for nearly 510,000,000 doses of tincture of digitalis—dried and shipped by citizens of Oregon at the request of the United States government, has been sent to the federal laboratory at the University of Minnesota, where it will be made into tincture of digitalis for the army and navy.

Tractors and Implements at the State Fair

Written for California Cultivator by M. C. Holman
Photos by the Author

HARDLY anything could have been more pleasant to an earnest agriculturist than to see the very complete tractor exhibit at the state fair. It was splendidly housed in two mammoth tents and was so agreeably arranged that the prospective buyer could view the machines from every angle.

Great crowds thronged the broad aisles, flags of all allied nations were unfurled, music by the Holt, Samson and Best bands was rendered daily and the entire exhibit took on the nature of a successful product successfully handled.

If tractors could speak, those at the state fair would have told a wonderful tale. Their existence is the crowning achievement of agricultural implement construction. We speak of tractors as inanimate objects, but to one who knows and loves them they are rather the very essence of life and activity.

At the state fair we heard a wonderful harmony of tractor voices. We heard the little fellow, hardly yet out of his swaddling clothes and we heard the giant of them all. It was a great family circle, each with his part to do. There is harmony in that circle, partly because tractor sales are good and no one needs to say aught against his fellow. And there was harmony because each tractor travels its own course, doing the things that others are not fit to do and leaving to others the things it should avoid.

Who could fail to stop and wonder, as he entered the tents in the tractor section? There, before one's eyes were the steel giants, motionless, it is true, but with a force that was at once capable of turning the soil, planting the seed and reaping the harvest of the lands for miles around. All they needed was a little of the encouraging fluid and a chance to show themselves.

If one will observe he will find that it is easy to distinguish three classes of agriculturists, in so far as tractors are concerned. In the first class we would place the man who already owns a tractor, and he attends the show to note the improvements that have been made in his tractor and to get some pointers upon the management or care of his machine. In the second class we find the man who has made his selection of the tractor that he feels sure will meet all of his requirements, and he comes to the fair to confirm his judgment after having studied the various catalogues for which he has sent. And there is the third class. He is the man who has made up his mind that he must have a tractor, but has not yet settled upon the one that seems to meet his every requirement. We might also define a fourth class. He is the man who still thinks that his four horses are good enough for him and that too much mechanical farming is not the way nature intended he should raise his crops. The horse has his many uses on the farm, but he may sometimes be an expensive luxury. United States statistics show that the average farm horse works but three and one-half hours a day. He consumes ten pounds of food for every hour of work, or 12,000 pounds a year, which is the product of five acres under cultivation. The horseshoes that are annually hammered on by the American blacksmiths take enough iron to make several thousand tractors.

Let us take a glance at some of the tractors, and see what we can discover in them that would particularly meet individual requirements. For a long time the farmer of California has been looking for a small tractor that would be suitable for farms of fifty acres or less. There are hundreds of such small places in the state and to get a tractor that would do the work and at the same time come within the means of the purchaser was the real puzzler. But these obstacles have been overcome in the new tractor that has recently come to the Coast from the Avery factory and is being offered through F. H. Poss of San Francisco.

This little tractor is of the 5-10 horse power size with Hyatt roller bearings throughout and three speeds. It is capable of using two plows and will work at the rate of two and a half miles per hour. The engine is enclosed, giving freedom from dirt and minimizing the labor of its care. At the price at which it is sold this tractor bids fair to completely meet a very big demand.

Another of the smaller type of tractor is that made by the Bean Spray Pump Company of San Jose. This tractor is peculiar to itself in that it has but one tractor tread of the tracklayer type. It has a six horse power rating with ten horse power at the belt. Its speed, when plowing, is two and one-half miles per hour. It is equipped with Hyatt roller and New Departure ball bearings and has a total absence of plain bearings. The links of the traction chain are identical and interchangeable, and are made of the finest carbon steel. It carries the famous Le Roi motor of four cylinders. The Bean tractor is particularly serviceable in orchard work as it can make short turns and is quickly controlled by the hand lever.

Quite a satisfactory tractor in every way is the Cleveland. It is a tractor from start to finish and the entire mechanism is encompassed in the space on which the treads rest. This tractor was designed by Rollin H. White, the famous motor truck engineer and has been improved upon from year to year, until it seems to embody everything that could be desired in a general all-around tractor. In considering this tractor we advance around in the scale of sizes, for it is of the 12-20 horse power type, being suitable for any size place from 50 acres up. There are 24 bearings in this machine and they are all of the famous Hyatt make, with dust proof casings. The motor is their own manufacture and is especially designed to carry the weight of this machine. The traction surface is 600 square inches and the turning radius is 12 feet.

In these times of great ship building it is a pleasure to see a tractor that is "built like a battleship." Such a one is the Samson Sieve Grip tractor, and it is sturdy, powerful and reliable. One cannot escape admiring the husky bulldog courage of this tractor, and it seems ever on the watch for something to do.

When one realizes that the Samson will replace ten horses its immense value to the farmer becomes very apparent, but it is also adapted to countless uses for which horses are not available. The strength of its working parts and its dust proof motor give assurance of long life, steady work and low up-keep cost. It is simply, but powerfully constructed, the work of years of development and no skilled mechanic is required for its operation. The simplified steering device makes its guiding an easy matter for the operator. The Model S-25 is a full 25 horse power machine with over-size bearings, steel construction and dust proof bearings, with thorough lubrication. The peculiar construction of the wheels gives a tremendous gripping force with corresponding traction power.

That women are becoming expert in the work of driving tractors was shown at the recent demonstration at Davis, when the Yuba tractor was driven by a comely young lady in the regulation overalls. And others have followed the lead until it is now quite common to see women guiding the big steel horses. And the women enjoy their work immensely. It is fascinating, invigorating and health giving. It takes upon itself the nature of war work and every woman is striving to do her bit to help restore Europe to civilization.

As the Yuba tractor is similar to an automobile in its steering mechanism it is at once suitable to feminine guidance. And there are sure to be more women drivers each year for it is to become popular work on the farm. In working with the Yuba the driver has at ready command the power that displaces 12 horses and several men. The model 12-20 is 25 horse power with a high power four cylinder engine to furnish the motive pow-

Exhibits in Tractor and Implement Tent not Exclusively Tractors
California Corrugated Culvert Company of West Berkeley made attractive exhibit, a partial view of which is shown at left. In the center is a section of the Standard Oil Company's exhibit which was one of great attractiveness. Some of Schmeiser Manufacturing Company's land levelers, big enough to command full energies of largest tractors, were exhibited. A portion of their display is shown at right.

er. The Yuba is a thoroughly well constructed tractor and is a strictly California product, being built at the immense shops located at Marysville and Benicia.

And now, let us approach the big fellows—those that go regardless of what is behind them. Whether it is plows, harrows or scrapers, or field artillery, or whether they are working as tanks on the western front, they go, and everything goes along with them. They are the giants of power, the great forces that bring in the harvesters on the big ranches of California and on the plains of Kansas and Nebraska. They are supreme in their tractor field and on the battle fields of Europe they are aiding the doughboys to keep the Huns on the run.

The big Holt and the big Best are of the type enormous. They appeal to men who have big things to do. These immense tractors have a rating of 75 horse power and weigh about 12 tons. Their very bulk, the power they represent and the work they can do are things to conjure with.

There were, of course, dozens of other tractors, all worthy of purchase, but too numerous to mention.

We would be pleased to furnish specifications of each tractor, but it would require volumes. Instead of that we are showing you a complete view of the tractors as they stood on exhibition. The particulars as to mechanism, power, uses, construction, etc. are discussed and fully illustrated in the catalogues issued by the manufacturers.

In all, the exhibit numbered more than 60 machines of various types and sizes. Some were of the caterpillar type and others were of the big wheel model. One could look and admire to one's heart's content and in that great array it is not difficult to select the one that will best suit ones needs.

The modern tractor is a most complete and perfect piece of mechanism, and with proper care it should last for many years and give undiminished service. One of the most important elements in the care of a tractor is lubrication, and fully realizing the importance of this branch of the care of tractors the Standard Oil Company placed a complete line of its tractor oils on exhibition and also sent its expert to deliver lectures on the essentials of lubrication.

And intermingled with the tractors were the plows of various sizes, harrows, scrapers and all kinds of tools that properly accompany the tractor.

This tractor display was under the auspices of the California Tractor and Implement Association and it covered an area of more than 44,000 square feet. While it was what is termed a still exhibit, there was plenty of opportunity to make a close examination of the various parts of the machines and that kind of an exhibit has its many advantages, not the least of which is the avoidance of having to tramp over furrowed and dusty ground.

A complete demonstration was held every night in front of the grand stand. It consisted of moving pictures of tractors at work under various conditions from side hill work to pulling the deep sub-soiler. The demonstration was the first attempt to combine the two kinds of exhibits and that it was successful and much appreciated was attested by the crowds of from 1000 to 4000 nightly.

But if one must see the tractors in operation the opportunity will be afforded next week near Los Angeles, where the tractors can be seen tearing up the ground, making turns, going up hill and down and pulling more than they are rated to pull. But suffice it to say at this time that a visit to the state fair was wonderfully profitable, if only to become better acquainted with tractors. The two large tents in which the display was housed were thronged during the entire week. Descriptive matter of all kinds was to be had and the educational features of the exhibit were such as to make men know that to use a tractor is making the step in advance which every progressive farmer wants to make. We predict that many more tractors will be seen on California farms because of the exhibit at the war-time state fair.

Motorize and Fertilize

Best Results in Farming always follow the most approved methods

Power farming aims to accomplish more work with less man power and time. The farmer who uses

Hauser's Organic Fertilizer

gives his crops the needed food enabling him to reap the full benefit of his industry through tractor farming.

Motorizing and Fertilizing are sure signs of intensive patriotic farming.

You Sit Where You Always Sat On the Seat of the Implement

MOLINE UNIVERSAL TRACTOR

It Solves The Farm Help Problem

YOU wouldn't think of riding on the back of one of your horses while at work in order to guide your team. If you did you would require another person to operate the implement, because implements require constant attention.

Then why attempt to operate a tractor in a manner which your experience has proven impractical? It is just as illogical to ride on a tractor in front of the implement and expect to operate the implement from that position as it is to operate the implement from the back of your horse.

Any way you look at it you are working at a disadvantage with the ordinary tractor. To do the best work two operators are required, one on the tractor and one on the implement. In these days of extreme labor shortage this is a tremendous handicap. With the operator on a tractor in front of the implement it is manifestly impossible for him to give the implement attention and make adjustments for varying field conditions without losing time.

Just Like Driving Horses

With the Moline-Universal Tractor you sit on the seat of the implement and have perfect control of both implement and tractor. You are in the best position to observe the work, make adjustments and manipulate both tractor and implement. This holds true regardless of the work being done—plowing, discing, harrowing, planting, cultivating, mowing, harvesting, both grain and corn.

A Time Tried Principle

There is nothing new about this, we simply apply a principle which millions of farmers have demonstrated to be sound. The Moline-Universal gives one man control of greater power than is possible with horses, with the same method of handling and as much versatility. With the Moline-Universal one man can farm more land. It is a six-horse unit—easier to control than one horse and capable of doing the work of from 6 to 8 horses.

Works Day and Night

The One-Man feature is just one of many advantages the Moline-Universal has over other tractors. It is the only tractor which will do all farm work, *including cultivating.* It is the only tractor regularly equipped with self starter and electric lights. Non-robust labor can operate the Moline-Universal successfully, and it can be worked day and night.

No detail has been overlooked to give the new Moline-Universal Model D Tractor positive reliability. The perfected, overhead-valve 4-cylinder engine develops unusual power, and is economical in operation. It is conservatively rated at 9-18 H. P. Oil is forced to crankshaft bearings under 35 lbs. pressure. Gears are steel cut, drop forged, and heat treated. All shafts are splined. Every working part is easy to get at, and every moving part is enclosed.

Valuable Information for You

Our catalog tells how you can operate your farm with less help and expense by using a Moline-Universal Tractor. A post card will bring the catalog to you.

Since 1865 we have been making farm machinery, and now offer a complete line of both tractor and horse drawn implements. Information on any of the Moline implements listed below will be gladly furnished on request.

FREE LECTURE TO BE GIVEN BY TRACTOR EXPERTS

Realizing that thousands of tractor owners and prospective operators will attend the big Third Annual Tractor Demonstration, September 17-21, the National Automotive School has decided to do some very commendable work. It has arranged a course of free lectures each day during the meet. These lectures will be worth a good many dollars to any man interested in tractors. They will be one hour long, one to be given in the forenoon and one in the afternoon and will be scheduled so as not to interfere with the regular demonstrations. Various instructors headed by M. G. Coles, chief instructor, will lecture on various phases of tractioneering, and the talks will not be dry and deeply technical but rather will be practical and instructive so that anyone can understand. There will be demonstration models of various parts of tractors so that the lecturers can actually demonstrate their talks.

Schedule of Lectures

Following is the arrangement of lectures as prepared by the school faculty:

September 17: Morning, principle of the four stroke gas engine, single, twin and four cylinder types, cylinder design and cooling methods. Afternoon, tractor ignition

September 18. Morning, carburetors and mixtures, handling heavy fuels. Afternoon, Magnetos.

September 19. Morning, bearings and lubrication, oils and greases. Afternoon, How to avoid ignition trouble.

September 20. Morning, breaking in a new tractor. Afternoon, Repairing magnetos without the help of a service man.

September 21. Morning, how to succeed with tractor farming.

Seating arrangements have been made to accommodate a large audience.

FOOD WILL WIN THE WAR
KEEP NO LOAFING ACRES

HALF the food produced in America is now being shipped to our allies. We feed more than a hundred million people in other lands.

There is no stock of food stored for future use. The demand is constantly greater. It is your patriotic duty to plant every acre—make it work.

The Yuba 12-20 Tractors are your army and navy, your artillery, infantry and marines—your bayonets, rifles and machine guns—your reliable equipment to make your acres win the war. Yuba 12-20 Tractors are the best all-around machines for the small farm.

—

A livestock advertisement reads: The average pure-bred Holstein yields about six times the profits of the scrub cow.

—

Yuba 12-20 Tractors cost more in the first place, but they cost less always thereafter.

The Yuba 12-20 Tractors are now being shipped when ordered. To be sure of getting yours when you want it—order now.

Orange Details: The Matter of the June Drop

Written for California Cultivator By D. J. Whitney

THE biggest question before Central California orange growers just now is the cause and cure of the June drop, at least it is the most discussed question, and this seems to be the case over all the state. There is no proof yet of the best way of controlling this drop. There are only theories about it and the purpose of this paper is to consider these theories from a practical standpoint as they relate to this district and in that way to keep growers from trying some new and unusual way of handling their orchards next spring.

Personally the writer feels that there is no patent way of getting around this trouble outside of giving the trees good, standard care and keeping them growing as vigorously as possible, and that the safest thing now is to follow standard methods until summer cover crops and other theories have been successfully tried out in the immediate vicinity.

In this connection it is interesting that a paper in another part of the county had a widely copied editorial of the successful set of oranges in an orchard near here where alfalfa was planted between the rows, the alfalfa breaking the heat and keeping the fruit on the trees. There may be such an orchard, but nobody around here seems to know where it is. So common sense suggests the wisdom of waiting till a method is successfully tried out in a place where a man can see both method and success with his own eyes before going head first into it.

A ranch manager close by is much interested in the summer cover crop idea as it relates to the June drop and contends that the proper system is to plant a summer cover crop, such as beans, the first thing in the spring, so that it will shade the ground during June, then keep plenty water on for both trees and cover crop, plowing in the latter about August. Another man arguing to the contrary claims that the ground needs cultivation, which it cannot get when vines are growing on the land. Well, the crop can be grown all right, for the beans can be cultivated until they shade the soil and after that cultivation will be unnecessary. This is shown in the numerous bean crops grown around here in late summer and fall in young orchards.

Flaws in the Plan

The weaknesses of the plan would seem to be these: Wherever oranges are extensively grown, water in time becomes very expensive and not overly abundant. Much surplus water is rare, but a summer cover crop calls for a lot more water than the trees alone would need. This is a very important objection and would prevent summer cover crops in a large majority of cases even if they should seem helpful otherwise.

In the next case, when the cover crop matured it would have to be disposed of. While moist and green it will keep the ground somewhat loose. Say that beans were grown, and these seem to be the best crop for the purpose. When the vines matured the leaves would shrivel and fall; the sun would strike the ground and the land would have to be plowed. There is a faint prospect that disking might do and if so, there would be no particular harm done, but plowing probably would be required.

Personally the writer would be afraid to hurt the crop by going over all the land in midsummer with a turning plow while the oranges were developing rapidly and the trees growing their best. The leaves need all the water they can get at that time, and to shear off a lot of the roots in about the hottest season of the year looks like poor policy.

Perhaps this program would be unnecessary, but it is the program that interested growers think best fills the summer cover crop theory, and if there is a more promising theory they ought to learn it before trying the above plan. It seems positive that if the crop covered the soil in June it would have to be plowed under in late summer, and it also seems positive that the root cutting at that time would injure the trees.

An alternative plan might be to grow sweet clover (melilotus), between the trees, mowing it, if necessary, and leaving it on the ground during the summer and plowing it in during the fall. This would overcome objections which could be applied to a short season crop, like beans.

Winter Growth Seems Best

For various reasons the logical time for growing humus makers in orange orchards seems to be winter. This has been the rule since fruit growing became a business here. In winter the trees are nearly dormant and grass or weeds can run riot without robbing leaves of plant food or moisture. In the other system the cover crop is eating plant food and drinking water at full speed at the very time that the orange leaves are trying to do the same. So, in winter there is no competition between cover crop and orange tree while in summer there is.

Further, in winter there is usually plenty of moisture provided by nature, and if rains do not come irrigation can be used. Evaporation then is small. In summer evaporation is terrifically rapid. An orange tree, or any other tree does not seem to be made to share the land with other crops; it is a hearty feeder and needs all the moisture and food that the soil can provide. It is true that alfalfa and fruit trees now and then do well together but the thing is yet an experiment and gives little promise of becoming a very common method, on old orange orchards at least.

Crops Hard to Plow Under

Then there is this very great objection to the summer cover crop, the difficulty in getting it well into the soil. Winter cover crops are said to be fine, but they are only used on less than half the orchards for the reason, in most cases, that they are too hard to plow under. It depends upon the soil largely, but around here it is usually found that when a man has a big cover crop on heavy soil, particularly when the winter is so wet that he cannot get onto the land until late, he has a terrible time getting the veg-

Some Rubber

Hand Made

We will exhibit at the Tractor Demonstration

Factory Distributors:

Lichtenberger-Ferguson Co.

Los Angeles Fresno

San Francisco

etation under, and his land is rough until well into the summer, and the trees become yellow and poor.

Now, if a man gets a heavy growth of summer cover crop and has much difficulty in getting it mixed with his soil, he is in a bad way, and he probably will have that difficulty unless he either disks his soft green crop under as soon as the June drop is past or grows sweet clover and mows it and lets it rot on the ground as soon as it reaches any size. There might be a lot more to say on the subject, but until the contrary is proved plenty of irrigation and good summer cultivation looks like the right thing.

Promising Methods

Judging from results in this vicinity abundant irrigation seems to be one of the best things. Let the ground have sufficient moisture at all times. A certain man has a good deal better crop than his neighbors because the oranges stuck on the trees better in June. He attributes it in part to giving the land a good irrigation in December when he decided that the rains were holding off too long. Then, in spite of high fertilizer prices, he gave the orchard a slight dressing with nitrate of soda and sulphate of ammonia in the spring. In other words, he kept the trees strong and growing.

The next step is to keep plenty of water in the soil at all times. In the previous paper it was pointed out how the orange tree quit growing when moisture got scant and started up in a new place at the next irrigation. When growth is checked it is likely to be checked in the fruit, which has nothing else to do than to drop off, whereas if there is so much moisture in the soil that there is no check in growth the fruit can keep developing, save for a natural drop which is unavoidable and frequently beneficial. In more than half the orchards this year and last year much of the June drop can be directly traced to the growers planning to irrigate when they thought the trees needed it; then a hot spell came along and before they could irrigate the whole orchard a lot of the fruit was off. It is a bad business to wait till a job is absolutely necessary before doing it. If they had started two weeks before they thought they had to the trees never would be in danger. After all irrigation lies at the foundation of nearly everything in orange growing.

Finally, in the view of the writer, after irrigation and soil handling, the biggest and most neglected opening in orange tree vigor is systematic pruning, far heavier than has been used yet as a rule. Pruning puts vigor in every kind of a tree; it puts vigor into orange trees, and vigor is what is needed in putting fruit on a tree and keeping it there.

AVOCADO MEETING

The California Avocado Association will hold its semi-annual convention in conjunction with the California Liberty Fair in the Assembly hall, October 19. In connection with the meeting, at which a general program of interest to avocado growers will be given, there will be an exhibit of avocados and avocado products. In fact this will be maintained during the entire fair, October 12-26. Members of the association will hold their annual banquet on Friday evening, the 18th.

The avocado growers are a live bunch and will put up a good show of fruit. The officers of the association are: President, Wm. H. Sallmon, San Diego; vice president, J. M. Elliott, Los Angeles; secretary and treasurer, W. L. Hardin, 623 South San Pedro Street, Los Angeles.

BEANS BELOW NORMAL

Ralph D. Robertson, farm adviser of San Joaquin County, advises the California Bean Growers' Association that conditions in San Joaquin County indicate a falling off in the production of beans in that important district. His report is as follows:

"Red spider has been prevalent and will decrease yields. This has been an unusually dry season and in many sections even where irrigation water was available the beans show the effect of the drouth.

"I have not been able to ascertain the exact acreage planted to beans but I do not think it is far different from that of last year, which was almost double the normal acreage. Last year many people planted beans on land that was not adapted to their culture. This was true particularly in the South San Joaquin irrigation district. I would say that the yield will be less than that of 1917."

TRACTOR POINTS

Flies dont hurt the tractor.

The tractor goes to work when you want it.

The farms of the country require more power than do the factories.

One acre out of four under cultivation is farmed for the benefit of the horse.

Farm labor is increasing in cost—one reason for the development of the tractor.

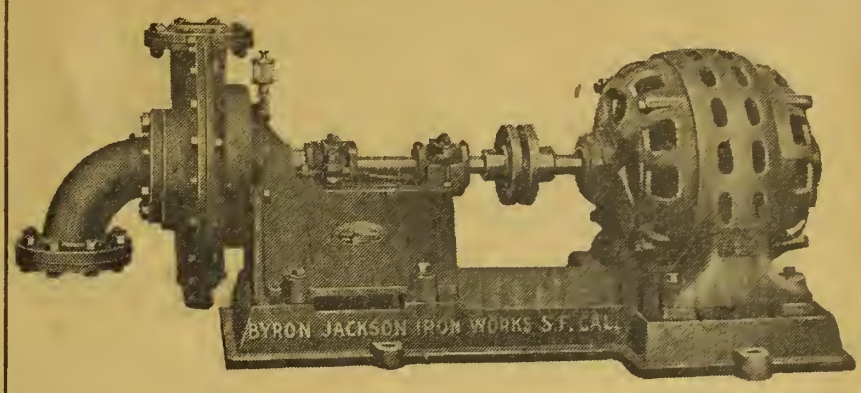
The life of a tractor depends upon the number of hours it is used and the care that it gets.

The tractor will never replace the horse; it will only do his unprofitable work on a profitable basis.

The first cost of a tractor is less than the first cost of good horses capable of doing the same work.

Almost half the gross cost of operating an ordinary farm is made up of horse labor. (Extension Bulletin No. 15, Minnesota Farmers' Library).

A member of the United States department of agriculture says that farmers lose millions of dollars annually because their plowing, tilling and threshing are not done at the right time.



Have You a Producing Ranch?

If not, Why not?

The difference between a "live" and a "dead" Ranch is "Water" and "No Water."

See the "Caterpillar" Tractor

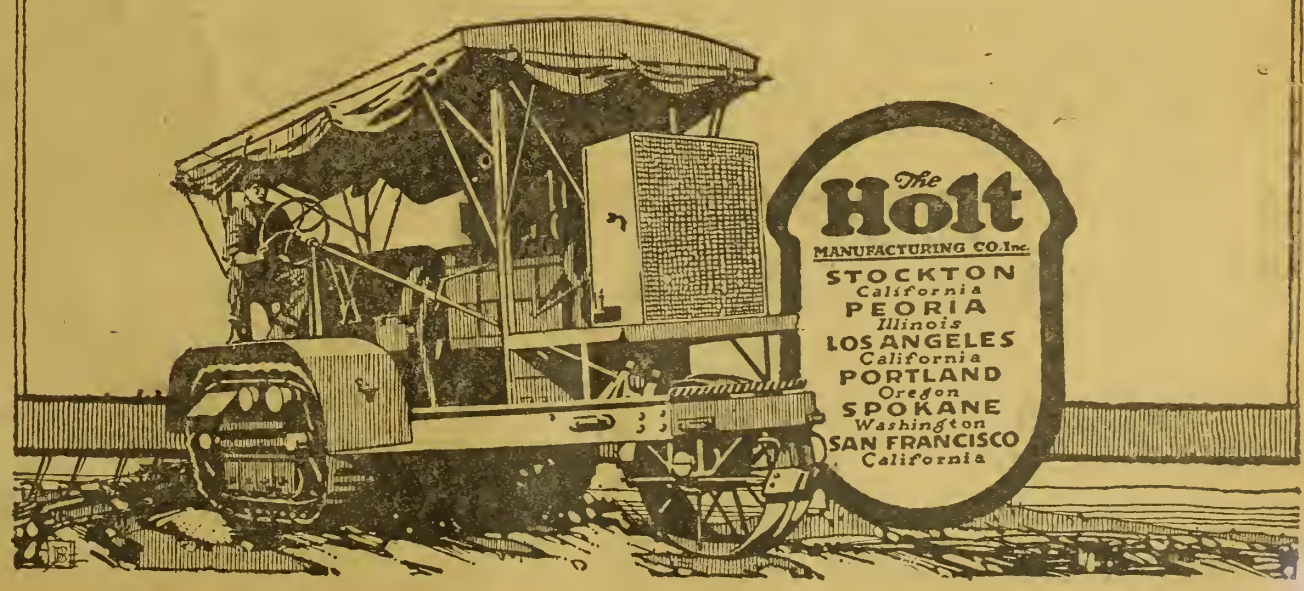
at the Los Angeles Demonstration

America must feed the world—a task that can be accomplished only by the employment of the most efficient methods and machines. It is, therefore, the patriotic duty of every farmer to visit the Los Angeles Demonstration and learn the "how and why" of modern power-farming.

See the "Caterpillar" Tractor there and learn why this tractor stands supreme. Study its construction—use of the highest grade materials, workmanship and design make this tractor able to do work that can be done by no other kind of tractor power, and to stand up for years of service under the most severe conditions. Learn how the tractor can improve your crops, increase your profits, lessen your labor and lessen costs.

"Caterpillar" Tractors have proved their merit on the battlefields of France. For more than a decade they have served the farmers of this country and every other agricultural nation. Thousands of satisfied owners testify to the superiority of this tractor. And the "Caterpillar" Tractor will do for you what it has done for others. Now, more than ever before, you should adopt this tractor for your work. See it at the Los Angeles Demonstration, or write today for complete catalogue.

CATERPILLAR
Reg. U.S. Pat. Off.



The Killefer Manufacturing Company

Killefer Quality — Killefer Efficiency

Real Tractor Implements
Built for Western Conditions

We will be pleased to see you at the big Tractor and Implement Demonstration to be held at Los Angeles, Sept. 17th to 22st.

Our full line of Tractor Implements, 32 in all, will be shown in operation.

Some new developments in tractor tools:

Automatic Lift Subsoilers
Automatic Lift Gang Plows
Automatic Double Disc Harrows

This Disc Harrow is the greatest development in Tractor Implements of the day. The only automatic shift disc on the market. It is a wonder. If you need a disc harrow, you will buy this one when you see it.

Do not miss seeing these tools; make yourself at home at the Killefer Tent.

Note—The location of the Tractor Demonstration has been changed from Whittier Boulevard to La Brea Road and Wilshire Boulevard, six miles west of the business center of Los Angeles.

2209-2221 Santa Fe Ave. Los Angeles, California

DEMONSTRATION NOTES

New Men with Dauch Mfg. Co.

J. W. Wellington has been made general manager of the Dauch Manufacturing Company of Sandusky, Ohio, builders of the well known Sandusky tractors. Mr. Wellington has a national reputation, having formerly been production manager of the New Castle plant of the Maxwell Motor Company, as well as the Mathews Boat Company. His long experience in the engine and automobile fields will be found of the greatest asistance to the Dauch organization and will mean a decided increase in production.

L. E. Willson has been appointed general sales manager. Mr. Willson was formerly vice president in charge of sales at the Briscoe Motor Corporation. He is now reorganizing his sales connections.

See the Heider at the Demonstration

The Heider tractor will be demonstrated at the Southern California Traction Engine and Implement Dealers Demonstration, by E. P. Bosbyshell Co. of Los Angeles, distributors of the Heider and Rock Island lines. Manufactured by the Rock Island Plow Co., it was to be expected that the Heider should, on being introduced into California, give a splendid account of itself. The tractor has been operated on many farms for several months and is doing splendid work. Three sizes are offered. It was the plan of the company in building the Heider that an all purpose farm tractor be given the purchaser and one which could be used in many kinds of work, at the least expense and with greatest efficiency. The Heider burns kerosene successfully. It has had 10 years actual field work and is highly recommended by many farmers who have operated it.

Tractor Course

Right along with the motorizing of the farm comes the very necessary feature of knowing how to care for and operate a tractor successfully. Farming is being made a more scientific proposition all the time. The National Automotive School, 807 S. Figueroa St., Los Angeles, for a very nominal sum has been giving most useful instruction in traction engineering and in mechanics, too. This school is recognized by a number of the oldest and largest tractor manufacturing concerns that have placed their tractors at the disposal of the school, realizing that it was an institution of vital interest to the tractor and agricultural industries. The school is equipped with a splendid machine plant and up to date tractors and instructors of splendid ability to give every one a thorough course in operating tractors. It would no doubt pay any farmer who has not had previous experience with gas engines and tractors and who has recently purchased a tractor, to take a course at this school or to have some member of his family attend the school.

Tracklayer at the Demonstration

Dealers and farmers who attend the tractor demonstration will be interested in tractors that have been brought to the Coast this year. The tremendous demand for tractors in the Central States has made it impossible for some factories to reach California heretofore. The R. and P. tractor, manufactured by the nationally known Republic Truck Co. of Alma, Michigan, and which will be made in Los Angeles soon to supply the Pacific Coast, will be in operation at the big demonstration, and a feature that has already attracted a great deal of attention is the wheel tracklayer, a combination that gives tremendous traction and pulling power.

The R. & P. is built with a positive drive differential, applying equal power to both rear wheels. All moving parts are enclosed and running in oil, and it is the claim of the factory that the R. and P. is the only tractor having these features and that this is the most powerful tractor drive known.

Tractor and Transplanter

See the exhibit of the Homer Laughlin Engineering Corporation, Los Angeles. This firm will demonstrate the Little Husky tractor, designed by E. F. Sullivan of that firm, a man who has had over 12 years' experience in designing and building the tracklayer type of tractor in California.

"All the weaker features of previous designs made by Mr. Sullivan have been eliminated," said Mr. John Craig of the Homer Laughlin Corporation, in speaking of the new tractor, "and we believe we have made the Little Husky the last word in tractor construction. Our tractor is built entirely in our own plant, which has its own gray iron and semi-steel, and brass and iron foundries."

It is equipped with special chain track invented by the designer of the tractor. This chain track is built on the principle of the coupling of the freight car. The links are made of cast steel and have a ¼-inch plow steel shoe, and replacements can be very cheaply and quickly made. The bearings are Hyatt Roller and New Departure Ball, thoroughly enclosed and dust proof. All movable parts are enclosed in dust proof housings. The system of lubrication is believed to be absolutely perfect. It is a high grade tractor throughout and its performance indicates unqualified success.

This company has brought out the Crawford Transplanting machine, something that gives promise of revolutionizing the gardening industry through solving the task of transplanting cabbage, onions, celery, etc. The Crawford Transplanting machine, operated by a child or farmerette, will do the work of 60 men. The machine was invented by James C. Crawford, an agriculturist at Burbank, a man who has had wide experience in growing Bermuda onions and who has spent five years in developing the machine.

Stinson Tractor and Plow

The demonstration given by the Stinson tractor, which is handled by Arnott & Co., 112-118 S. Los Angeles St., Los Angeles, will be of great interest to all who attend the big event. The Stinson tractor has proven its efficiency and ruggedness in the East and is entitled to a place among the popular farm implement lines handled by this firm for years. The courtesies in service extended the farmers who have been customers of this house will

make sales easy on the Stinson tractor. The Sanders tractor plow will form an important part in their demonstration and will prove again its ability behind a tractor. Their big display tent full of up to date farm machinery will be turned into a reception room where information and comfortable resting accommodations will be furnished their friends and patrons.

Waterloo Boy

For real service in farm and orchard no tractor sold in California has been more successful than the Waterloo Boy, now a John Deere product, by a recent purchase of the factory building them. Nearly five years ago the first of these was sold in Southern California to Henry Meyer of San Bernardino, who used in the cultivation of his 250 acre orchard and vineyard, to his entire satisfaction and with less than $50 in repair bills, until unfortunately a fire ruined it last winter. Others are in constant service that have been out nearly as long and, as one party said, "She runs as fine as she did when new." Simple in construction, economical as to operation, and durable in every part, the Waterloo Boy is a real success in the tractor line. The distributors, W. L. Cleveland Co., 209 No. Los Angeles St., Los Angeles, will be glad to send printed matter to any who may be interested in this fine machine.

Automatic Disc

A new automatic disc will be one of the welcome and attractive exhibits at the tractor demonstration. It will be exhibited and demonstrated with 31 other farm, ranch and orchard tools by the Killefer Manufacturing Company of Los Angeles. Every farmer who has ever yanked at the angle lever of a big disc firmly held, will welcome the new disc with hitches to change the pitch as well as draw it along. Other up-to-date tools exhibited by this firm will include subsoilers, cultivators, discs, harrows, gangs, weeders and many other tractor implements.

Ziegler Tractor Attachment

Ziegler Tractor Attachment, 611 North Western Ave., Los Angeles, is proving its ability to do the work of six to nine horses plowing, cultivating and general farm work. The attachment can be adjusted to any make of automobile and can be operated by any one who can operate an automobile. They will gladly demonstrate on any ranch within 100 miles of Los Angeles, and those interested in a tractor attachment should avail themselves of this opportunity.

Headquarters

As the location of the tractor demonstration is so easily accessible to the Crescent Bay beaches, the association has designated the well known Merritt Jones Hotel at Ocean Park official headquarters. The management has granted a discount of 33 1-3 per cent.

WORK IT DAY AND NIGHT

To make the tractors perform the most efficient service possible in our food production drive:

1. Don't let the tractor be a slacker. Give it good care and proper attention, but show it no mercy.
2. Use for your neighbor when possible. Exchange work.
3. Use the tractor for heavy work, releasing horses for plowing corn, etc.
4. Be prepared. Have everything ready for continuous work.
5. Do your own tractor work at the earliest practical moment.
6. Remember that experiments and experience prove that early preparation of ground brings higher yields.
7. Work the tractor night and day. Provide light for night work.
8. Use the tractor for pulling harvester. Necessary hitches are easily provided.
9. Give the machine a careful looking over after each day's work. Systematic care insures constant efficiency.
10. Teach some one else the care and operation of the tractor. Girls and young women soon become competent to operate tractors.

NOWADAYS

Beggar—Could you spare a hungry man a nickel?

Cholly—Yes, if you'll tell me where a man can buy anything to eat with a nickel.

Some General Facts---

About the construction of the HEIDER TRACTOR. It is the most advanced type of Tractor construction of the age. It is not a freak—remember that. It is a standard tractor, embodying the features of design and construction that are absolutely known to be correct.

HEIDER TRACTORS are not an experiment. They have years of actual service behind them.

The man who buys a HEIDER TRACTOR, buys a tried, tested and proven power, a real all-purpose farm power plant. It does every job, big or little, that power can be used for on the farm.

What Are YOU Doing To Help Solve The Skilled Labor Shortage?

We Are Doing Our Bit

To help this great problem. You will do yours if you will train yourself for more efficient, more essential, more profitable service. You owe this to yourself and your country. Select one of the following courses—the one best suited to your talents and inclinations—start NOW, with resolution and "the mighty hopes that make us men." BE AN ESSENTIAL MAN.

Tractor Instruction

We teach you Tractor Engineering—thoroughly, practically—affording you actual experience in operating various types of tractors; HOLT CATERPILLAR, INTERNATIONAL HARVESTER, and SAMSON SIEVE GRIP, on our demonstration field. This is a big, growing industry and offers wonderful opportunities to the trained Tractor Engineer, Mechanic, Demonstrator, and Salesman.

Auto Mechanics

We offer you a complete course in Auto Repairing and Driving. You will receive technical instruction and practical training in our public Repair Shop under experts. Over 5000 successful graduates. We fit you for the expert's position either in war duty or commercial lines.

Ignition

We offer an advanced course in electricity and magnetism as applied to the Auto and Tractor, specializing in high and low tension magnetos, coils, dynamos, batteries, armatures, and wiring. Complete equipment for thorough training.

Vulcanizing

An easily learned and profitable trade, very attractive to one able to make the small investment necessary to own and operate his own plant.

Machine Shop Practice

To mechanically inclined boys or prospective Repair Shop owners, this course offers a profitable field. We give a practical course on lathes, shapers, milling machines, etc., including bench and vise work.

Oxy-Acetylene Welding

This course embraces Welding, Cutting and Brazing, practical work on cast iron, malleable castings, steel and aluminum. Our equipment includes Prest-o-Lite, Burdett, Davis-Bournonville and Oxweld systems. Thorough training for shipyard and commercial work. Day and night classes in this course.

We take pleasure in showing visitors through our School

Sheep Raising in Japan

Written for California Cultivator By R. S. Vaile

FARMER'S Bulletin No. 840, which deals with farm sheep raising in the United States, makes this statement in the introductory remarks: "Wool values were advancing before the outbreak of the war. Although the consumption of wool was increasing, no foreign country, with the exception of South Africa, seemed able to increase its exports." In view of such a statement, the present movement in Japan to establish a large sheep raising industry becomes of considerable economic importance.

Dr. Tanimura of Tokyo, who has just been in the United States in the interests of the sheep production propaganda for Japan, crossed the Pacific on the same steamer with the writer, and it was therefore my very good fortune to receive from him at first hand a statement of his aims in this matter. For some time past Dr. Tanimura has been interested in the agricultural development of Japan, with the thought ever in mind of the economic independence of the Island Empire. Although a lawyer by profession, he spent some time in the United States studying agriculture, particularly at Cornell University, in order that he might have a better understanding of the problems and the possibilities connected with their solution. A few years ago he was instrumental in introducing from the United States many hundred varieties of commercial plants in an experimental way, nearly all of which have grown, and some of which have become widely distributed.

The present enterprise with which Dr. Tanimura has identified himself is the introduction of sheep. It is purely a commercial scheme in that he is attempting to interest capital from various sources to undertake the stocking of the hill pastures. From Japan he hopes to see the industry spread to Manchuria and Siberia, but that will be another chapter, as it involves the question of international relations in the Far East. The plan is to introduce every possible variety of sheep for the purpose of determining which one or ones may be best adapted, or for the purpose of having good foundation stock on which to build up new strains particularly fitted to the conditions of Japan.

As Dr. Tanimura told of his ambitions (and I may say that a large production of wool is involved in the dream) it was difficult for the writer to picture the possibility of such a movement making any great amount of difference in world commerce in wool. There were certain preconceived ideas of Japan, including an extreme density of population throughout the islands, and the farming of all the hills from base to top with a system of terracing and small plots of rice or other grains. This conception of Japan did not seem to permit any extended grazing industry nor even the converting of field crops into animal products, with the resulting loss in total human food that is inevitable in any live stock farming.

But Japan as I saw it was very different from this preconceived idea. There were certain terraced hills, to be sure, but certainly less than 50 per cent of those which we passed coming down the coast from the Bay of Sendai to Yokohama, or on the overland trip from Tokyo to Kobe, or going through the Island Sea, were farmed or even inhabited. Many of them were thickly forested and whether tree covered or not, there seemed to be a luxurious growth of forage grasses. The seasons in Japan are such as to maintain such a growth almost continuously throughout the year. With such conditions large numbers of sheep could be supported, literally "in clover", at no expense except for labor of herding, for there is no time of year when shelter is absolutely necessary. And, it is to be remembered that labor is the cheapest thing there is in Japan.

Now that I have seen just a little of Japan I can readily picture a wool producing industry that may have a very material effect on world commerce. Mills will doubtless be erected in Japan to handle the product, and it is easily possible that the bulk of the woolen trade of the East will go through Japan, for she is extremely quick in adopting modern methods and, because of her cheap labor, she is often able to beat the originator at his own game. And the hills of Japan, if grazed with the thoroughness and care that the Japanese is capable of, will carry a large addition to the world's supply of both mutton and wool.

Live Stock at the State Fair

ASKED as to the outstanding feature of the live stock exhibit at the recent state fair, one of the judges said: "Your breeders have learned to fit their stock for the judging ring. There is a vast improvement in this respect. I have never attended a fair in the West where better fitted stock was exhibited."

On the other hand we heard a hog breeder say: "There is one satisfaction in this fair; the hogs are not overconditioned." In former years hogs have been brought there so fat that the heat overcame numbers of them. We believe not a hog was lost this year.

It was not large, but a most satisfactory showing of California live stock.

BEEF CLASSES

The beef cattle show afforded a wonderful demonstration of what can be accomplished in the way of beef making on the Pacific Coast when good blood and good feed are combined.

Shorthorns

The Shorthorn show was particularly strong, but there should be more herds represented. There should also be many more Herefords and Angus.

All of the beef breeds were judged by John Robbins of Horace, Indiana, a veteran breeder of Shorthorn cattle.—W. S. G.

Exhibitors: W. M. Carruthers, Live Oak; T. S. Glide, Davis; Hopland Stock Farm, Hopland; Pacheco Cattle Co., Hollister; Roselawn Stock Farm, Woodland.

FOR MILKING MACHINES

Clear and Clean as Water

B-K keeps tubes and cups sweet and clean. Penetrates milk solids—kills the bacteria. Is clean—harmless—cannot taint milk. B-K makes rubber parts last longer—cannot harm metal. Used and recommended by Milking Machine Manufacturers for years. Cheapest in actual use—sold under guarantee. Get B-K today—end sour milk troubles. Send us your order and your dealer's name. Send for dairy bulletins and "trial offer."

General Laboratories—Madison, Wis.

3149 So. Dickinson St.

Aberdeen Angus

For the first time a herd of Aberdeen-Angus cattle of superlative merit was exhibited. This was from Congdon & Battles of Yakima, Washington.

The sleek, well fitted black cattle were much admired. They are veritable "cylinders of beef," their carcasses being plump and mellow and well rounded. They have no horns, are affectionately called "doddies" by their admirers, and have always been consistent winners in fat cattle classes both in America and in Great Britain.

All awards to Congdon & Battles, Yakima, Washington.

Herefords

Representatives of five herds made up the Hereford show. Bunting won both grand championships.—W. S. G.

Exhibitors: John A. Bunting, Mission San Jose; H. H. Cazier & Sons Co., Wells, Nevada; W. H. Duke, Likely; E. M. Simpson, Hood; University of Nevada, Reno, Nevada.

Bulls, two years and under three—, 1, Beau Randolph, Simpson.

Bull, junior yearling—, 1, California Prime Donald, Bunting; 2, Standard Boy, Cazier; 3, Alamo Reuben, Duke.

Senior bull calf—, 1, Nevada Lad 8th, Cazier; 2, Alec, Bunting; 3, Beau Del Sierra 4th, University of Nevada; 4, Anxiety, Bunting.

Junior bull calf—, 1, Nevada Lad, Cazier.

Cows, three years old or over—, 1, Ramona, University of Nevada.

Cows, two years old or under three—, 1, Baby Bunting, Bunting; 2, Madame Juanita, Simpson.

Senior yearling heifer—, 1, Grace Bunting, Bunting; 2, Nevada Cazier, University of Nevada.

Junior yearling heifer—, 1, Miss Betty, Bunting; 2, Standard Eyes, Cazier; 3, Alyandia, Bunting; 4, Martha Christian, University of Nevada; 5, Hebe 2nd, Cazier.

Senior heifer calf—, 1, Isis, Cazier; 2, Venetia 2nd, Cazier.

Junior heifer calf—, 1, Standard Eyes 2nd, Cazier; 2, Standard Girl, Bunting.

Senior champion bull, Beau Randolph, Simpson. Junior champion bull, California Prime Donald, Bunting. Reserve junior champion, Nevada Lad VIII, Cazier. Senior champion cow, Baby Bunting, Bunting. Reserve senior champion cow, Ramona, University of Nevada. Junior champion cow, Miss Betsy, Bunting. Reserve junior champion cow, Isis, Cazier. Grand champion bull, California Prime Donald, Bunting. Reserve grand champion bull, Nevada Lad VIII, Cazier, Grand champion cow, Miss Betty, Bunting. Reserve grand champion cow, Baby Bunting, Bunting.

DAIRY CLASSES

F. H. Scribner of Los Angeles judged all the dairy classes. His awards were generally commended. Mr. Scribner's ability as a judge comes not only from intensive study of the dairy type, but lifelong work with the pure bred. He was the owner and breeder of Loretta D. when she made her world winning at the St. Louis Exposition.

Jerseys

Besides the regular premium awards in the Jersey classes there were special features which kept Jersey people interested in some feature nearly every day. One of the most interesting events was that of the awarding of the great silver cup illustrated in last week's Cultivator. There were only three entrants, this, the first year of offering this cup. D. F. Conant, Guy H. Miller and J. E. Thorp. Each herd consisted of five cows. Mr. Thorp proved the winner.

Exhibitors: Mrs. C. A. Briggs, Sacramento; D. F. Conant, Modesto; Dr. H. W. Hand, Orland; C. D. Hayworth, Modesto; N. H. Locke Co., Lockeford; C. G. Marchus, San Pasqual; Guy H. Miller, Modesto; J. B. & J. E. Thorp, Lockeford; J. E. Wherrell, Riverside; S. F. Williams, Orland.

Bulls, three years old or over—, 1, Altama Interest, Miller; 2, Lorna's Altama Interest, Hayworth; 3, Alva Lady's La Fosse Boy, Williams; 4, Imp of L., Thorp; 5, Golden Maidiken's Boy, Williams.

Bulls, two years and under three—, 1, Jolly Senator Raleigh, Thorp; 2, Valet's King of L., Locke; 3, King Leda's Foxy Laddie of L., Locke; 4, L. Midget's Valet of L., Locke; 5, Lucy Warder Foss Boy, Williams.

Senior yearling bull—, 1, Liby's King of L., Thorp; 2, V. Brighteyes King of L.; Locke; 3, V's Katrina's King, Locke; 4, X. D. King of L., Locke; 5, Fox's Sunshine Valet, Locke.

Junior yearling bull—, 1, Jap's Perfection Owl, Miller; 2, Lady Midgeto Valet of L., Locke; 3. Blossom's Liberty Bond, Hand.

Senior bull calf—, 1, Golden Legacy's Champion, Wherrell; 2, Pearl's Altama Underwood, Miller; 3, V's Xmas D's D. L. King of L., Locke; 4, Interested Insie's Owl, Marchus; 5, Brighteyed Lassie's Fox, Thorp.

Junior bull calves—, 1, Lorita's Majestic Noble, Miller; 2, Lady Dolly's Gold Dust of R. S. M., Conant; 3, Chappie of M., Thorp.

Cows, four years old or over—, 1, Salome of Mossdale, Thorp; 2, Goldie of Venadera, Miller; 3, Valet's Golden Biddy of

Electric blasting easier and cheaper

GIANT FARM POWDERS

STUMPING — AGRICULTURAL

The use of an electric blasting machine results in economy. It reduces the amount of powder required often by 10% to 20%. With it you can shoot several stumps or other blasts at one time. You can fire several lighter shots under a difficult stump or rock with better effect and less trouble than with a single large charge. It is the only reliable means of exploding charges under water.

Safety favors electrical blasting. There are fewer misfires and no hang-fires. Should a misfire occur, all danger of explosion is over when you disconnect the wires from the machine. As you can time blasts to the second, traffic along roads is not held up unnecessarily.

The smallest Electric Blasting machine fires five charges or fewer at a time, weighs but six pounds and cost is saved on a job in a very few days. Anyone can work all sizes of this simple, handy machine.

Send coupon (or postal mentioning this paper) for big free book "Better Farming." Tells you scores of money-saving ways of doing farm work.

Name_____ Address_____

MARTIN!

10 DAYS TRIAL

KING OF DITCHERDOM

Built for farm use. Equally successful for drainage or irrigation ditches. Fine for terracing and levee work. Cuts the toughest alfalfa or sweet clover roots without plowing. Leaves the ditch with smooth, hard banks. Works in any soil.

IT DOES THE BUSINESS

The name **Martin** on a ditcher is an assurance of satisfactory field work. It is significant that most Martins now go where others Martins blazed the trail. Each machine sells another—and the reason is

All Steel Reversible-Adjustable

No wheels, cogs or levers. Made in 2, 4 and 6 horse sizes. Large size fine for tractor use.

Popularity and True Merit

The Martin always has been and always will be sold **on its merits** and under a guarantee of satisfaction. More **Martins** are now in use than all other farm ditchers combined, and the facts stated in this advertisement tell why.

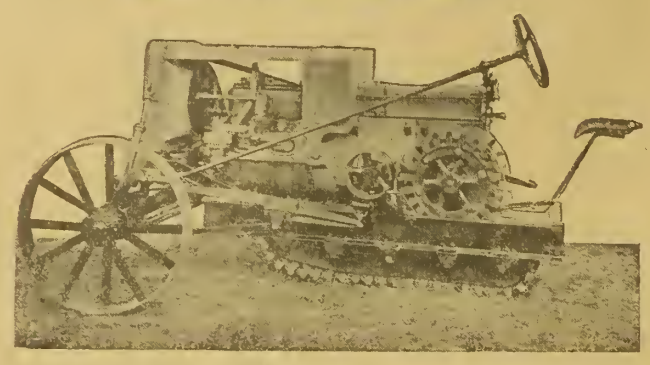
The Belt-Rail



"In a Class by Itself!"

If you have land hard to handle—sandy land—soft land—wet land—the Belt-Rail Tractor will take care of it all. It will please you "down to the ground."

The Belt-Rail is the only tractor with an external track drive. Note the bull gear on top of the track! This feature adds power.

The Belt-Rail is 12 h. p. at the draw bar; 20 h. p. at the belt; motor, 22.5 h. p.; weight 4500 pounds. It is on "3 point suspension," and of "unit construction" engine and transmission. All lubrication and bearings are enclosed and dust-proof.

In material and workmanship the Belt-Rail could not be better. Its radiator, motor, carburetor, magneto, air control and roller bearings are all standard. In a word we have built character into the Belt-Rail.

See the Belt-Rail perform at the Southern California Tractor Demonstration at Los Angeles, September 17-21. Get our booklet for users, also our leaflet for dealers. Don't buy any tractor till you know what the Belt-Rail will do for you and your ranch.

The Belt-Rail surely is the most tractor for the least money per annum! You will say so yourself — when you own one!

Other awards in dairy classes, with comment by C. L. Hughes, next week.

THE SHEEP SHOW

The California state fair deserves to have many times the number of sheep that were shown this year. The flocks that were represented were of very high quality and attracted much attention, but there should be 15 or 20 flocks of each breed.

Bishop Bros. of San Ramon won all prizes on Shropshires; Bullard Bros. of Woodland, most of the prizes on Rambouillets; John Marble of Redlands, the Dorset prizes; Jos. Levy of Manteca, the Hampshires; and the University of Nevada, the Corriedale prizes. There were also some very fine pure bred and grade Corriedales on display, but not shown for prizes, by Ellenwood and Ramsey of Red Bluff.

All of the classes were judged by Prof. R. F. Miller of the University Farm.—W. S. G.

WHO WILL BUILD A SILO?

The best way that we know of to get the full value of the corn and milo stalks is to make them into silage. This means the construction of a silo. We do not care what kind of a silo is built so long as it is serviceable. The stave silos are good, the concrete silo is better and the wooden hoop silo is serviceable and cheap. If anyone contemplates building, we would like to help. Call on us.—E. O. Amundsen, Farm Adviser, Placer County.

ANNUAL MEETING STATE ASSOCIATION POLAND-CHINA BREEDERS

Written for California Cultivator
By C. A. Briggs

Among the notable gatherings in Sacramento during state fair week was the annual meeting of the State Poland-China Breeders' Association—which was largely attended. Much business of importance was transacted. A number of important recommendations were made to the state fair association. Officers elected for the coming year were as follows; W. Bernstein, Hanford, reelected president; Geo. V. Beckman, Lodi, vice president; A. D. McCarty, San Francisco, secretary and treasurer; directors, Fred Gatewood, Fresno, H. I Marsh, Modesto, M. Bassett, Hanford, W. A. Young, Lodi. W. A. Young was also elected as manager of all fair matters with charge of exhibit decorations.

ANNUAL MEETING STATE JERSEY CATTLE BREEDERS' ASSOCIATION

Written for California Cultivator
By C. A. Briggs

The Jersey men of the state had their annual banquet and business meeting in Sacramento during the state fair. Following an address by the president, Dr. H. M. Hand of Orland, other addresses of great interest were made by Judge Peter J. Shields who spoke on the Jersey, "His First Love." Guy H. Miller reviewed the history and helpful work of the American Jersey Cattle Club. Prof. True gave an interesting talk on the relation of the university to the breeders work. Judge F. H. Scribner talked of type. James W. Henderson, Jr. gave a very interesting address on marketing problems. Ruland Hardy finished the list of speakers with a talk on his work at Anchorage Farms.

Officers elected for next year were: Dr. H. W. Hand, Orland, president, reelected; G. H. Miller, Modesto, vice president; J. E. Thorp, secretary and N. H. Locke of Lockeford, both reelected; directors, Mrs. Ruth Hardy, Orland; C. G. Marchus, Escondido; E. E. Greenough, Merced. Eight new members joined the association and much helpful matter was talked over. The meeting was full of "pep" and enthusiasm and a spirit of all get together for the Jersey was manifest.

SHORTHORNS AT STATE FAIR

The show of Shorthorns at the Sacramento State Fair this year is as usual excellent. Honors for both grand champion and rescrve champion bull went to Carruthers Stock Farm, of Live Oak, while Rose Lawn Stock Farm of Woodland carried off the award for grand champion cow. On Monday evening the Shorthorn men held a little get-together banquet and meeting at the Traveler's Hotel, at which 30 were present. Mr. Robbins, who acted so efficiently as judge, told of the pleasure it had given him to hand out the Shorthorn awards, and stated that the average of the cattle exhibited in every way equaled the Eastern and Middle Western state fairs.

An interesting address was made by Professor True, who told of the progressive methods employed by range men in the Hawaiian Islands and informed his hearers that they could well profit from the principles practiced there.

Other addresses were made by Pres

CORNER OF DIXON & GRISWOLD'S EXHIBIT

P. & O. farm machinery, ready for delivery to various tractors for the big tractor demonstration. This scene gives some idea of the popularity of the P. & O. line among the tractor men. DUROC ANNUAL

The Western Duroc-Jersey Association met in Sacramento the state fair week and after the banquet and sociable time proceeded to discuss matters of particular interest to Western breeders. Officers for the coming year are as follows: President, Fred Johnson, Napa; vice president, H. H. Braly, Newbury Park; secretary, J. E. Thorp, Lockeford; treasurer, V. H. Dolcini, Davis. Directors: D. H. Graham, Lancaster; W. N. Way, and H. P. Slocum, Willows. A campaign for new members resulted in the addition of several names to the membership roll, and it was decided to hold another meeting in Los Angeles at the time of the Liberty Fair and make another campaign for members in the southern end of the state. Members present were: W. N. Way, Elmer Lamb. W. W. Everet, H. H. Braly, R. Q. Wickham, J. E. Thorp, Fred Johnson. A. J. Welch. D. O. Brandt, D. H. Graham, H. P. Slocum, J. J. Merkley, H. C. Witherow, V. H. Dolcini.

CATTLE AUCTION SALE IN NEVADA COUNTY

The Nevada County farm bureau will hold a cattle auction sale at M. B. Church's ranch, The Lime Kiln, on Wednesday, September 25. The Lime Kiln ranch is in Nevada County about two miles off the Grass Valley road. The sale will probably commence at about 10 a. m. Everybody is invited to come and bring their lunch and make it a big "get-acquainted" day. These auctions are sure to grow and will soon include hogs and sheep as well as cattle.

RECORD SHEEP PRICE

Returning from the annual sale of the National Wool Growers' Association held at Salt Lake City, Charles A. Kimble of Hanford reports a record sale in all sheep stock. Mr. Kimble states that $6200 was paid for one Rambouillet buck. All prices ranged higher than usual. Mr. Kimble and Butler Bros. of Woodland, purchased a car of Rambouillets, most of the animals being brought to Kings County. Butler Bros. paid $3000 for one of their Rambouillets. The sale was attended by sheepmen from all parts of the United States and Canada. Rambouillets at present have the edge on demand, Mr. Kimble declares, owing to the government demand for the better grades of wool.

ASSOCIATION COWS MAKE GOOD RECORD

There were last year 472 cow-testing associations in the United States, and monthly records were kept for 216,831 cows, or about 1 per cent of all the dairy cows in this country. The cows in the associations whose records have been tabulated averaged 247 pounds of butterfat, or about 50 per cent more than the average production of all the dairy cows in the United States. If all the dairy cows in the country could be brought up to average of the cow-testing associations, production would be increased 50 per cent in quantity and the cost of production would be considerably reduced.

PREVENTION OF BLACKLEG

"Blackleg, With New Methods for its Prevention and Treatment" is the title of a circular just written by G. H. Hart, associate professor of veterinary science in the University of California and published by the college of agriculture, Berkeley. Stating that blackleg is prevalent quite generally in California, and that cattle from six months to two years dying suddenly with local swellings had probably contracted the disease, Professor Hart advocates the vaccination of cattle on known infected ranges before the blackleg season appears in the spring and fall, and also urges the vaccination of young animals turned out on unknown pastures. In small valley communities or on dairies where no cases of blackleg have been reported this precautionary measure is not necessary, it is stated.

The circular also discusses the use of blackleg vaccine, three forms of which are now being successfully employed: The powdered, pellet or string form; culture filtrate; tissue filtrate. A serum is at present available, declares Professor Hart, which should be used only as a curative agent upon valuable infected cattle. The article is available for distribution.

The Family Hen

Written for California Cultivator Bq Jean A. Koethen

NEVER since I have been interested in chickens have as many families been raising a few in the backyard as now. There may be fewer commercial poultrymen, but the number of backyard fowl has certainly increased. That this is true East as well as West is shown by the recently published statement that more eggs were received in the New York market between the first of April and the twentieth of May this year than ever before came into that market. Whether this means that the accounts of commercial poultrymen giving up and going into other work were exaggerated, or that all deficiencies have been made up by farmers and backlotters, it is encouraging because it shows that everybody who can keep a hen is keeping one and that there is likely to be no great shortage of eggs and poultry.

The demand for fall hatching eggs seems more brisk than usual, and this is another healthy sign. People are learning that chickens are the best of all meat and that a few fryers in the backyard are a wonderful help when company comes. Spring or fall makes little difference. Here in California we can hatch chicks at any time, and for the backlotter, whose yard space is limited, there is a good deal to be said in favor of hatching a few chicks every month rather than crowding pens and coops in the spring.

Comparison of the respective merits of various breeds will no doubt be a topic of conservation as long as the world stands, and it is well, perhaps, that tastes do differ so widely. The backlotter and the farmer who keep chickens solely for the family, almost invariably appreciate a chicken with some meat on its bones. For such the Plymouth Rock and Rhode Island Red will always be favorites. The family hen must be one that comes to frying size reasonably early and is by no means past her usefulness when she is through laying. She must also lay a good many eggs and be fairly well able to take care of herself without coddling. In other words, she must be vigorous and prolific and a goodsized carcass to boot.

My own experience with Barred Rocks has been very small, but I know they are much liked by many people—more in the East, perhaps, than in California. They have a splendid reputation as table birds, but are accused of excessive broodiness. This matter of broodiness seems a crucial one in heavy hens. Give us a hen that is good for the table, a good layer and not greatly given to broodiness, and we shall hail her as the perfect bird.

Broodiness, like most other faults and virtues, is a matter of strain rather than breed. Among all these heavy breeds you will occasionally find a hen that rarely if ever goes broody. Those who will take the trouble to band these only occasional sitters and use them only as breeders will be quite sure to find broodiness diminish in two generations. That is, it will disappear if the right male is mated to these hens. Twice in my experience with Buff Orpingtons I have reduced broodiness to the minimum only to have all my efforts nullified by bringing in a male from outside. These males must have been the sons of extra broody mothers, for their daughters were far more given to broodiness than the hens from which they were hatched. We shall never arrive at a minimum of broodiness by promiscuous mating.

I have now two Rhode Island Red hens two years old, which have never gone broody more than once a year. Last April or May both went broody and each raised her family. Now (September) they are both laying steadily, and neither has shown the least sign of the maternal instinct since she weaned her brood. I have mated to them the son of one, and expect from this mating hens as little given to broodiness as a Red can be.

But the Rhode Island Red, while she comes as near being the perfect family hen as a bird can, is lacking in one particular. The young stock is slow in reaching frying size. Some of us, too, like a bigger hen for roasting or potpie. For such, and for myself, my choice is the Light Brahma. They are more inclined to broodiness than my Reds, but less than Orpingtons and Rocks. They are steady layers and their eggs are large. As fryers the cockerels are not quite equal to Orpingtons, but they make the best of roasters at about four months of age, and a big plump hen, weighing as many do, from eight to ten pounds, makes a meal for the most festive occasion. Light Brahmas were one of the earliest breeds to be developed in the United States, and while they have been till now little known here in the West they seem to be coming steadily into favor.

Whatever breed is chosen for the backyard, let it be one the whole family likes, and let it be the best of its kind. There is a deal of solid satisfaction in caring for a pen of handsome, well-bred fowls. We are all human enough to like to hear praise of our own possessions and no one can look at well bred, well mated fowls without admiring them. I should hate to keep a lot of chickens that I could not show to my friends with pride, but a good many persons seem to find mongrels satisfactory. Perhaps it is because they have never known the joy of raising beautiful birds.

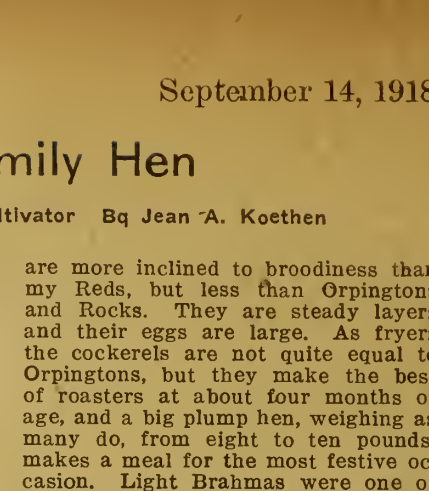
STORRS EGG LAYING CONTEST

Storrs, Connecticut, August 2, 1918. —Report for the forty-third week ending August 28.

During the forty-third week of the laying contest at Storrs the birds laid 3609 eggs, or a yield of 51.6 per cent, which is 47 more than last week and 281 ahead of the corresponding week last year. Of the 1000 birds competing, 229 failed to lay an egg during the week, or in other words, there were that many slackers.

Besides winning the week with 55 eggs the Oregons are now 13 eggs ahead of last years leading pen of the same date.

Now that the agricultural fairs and poultry shows are beginning the ques-



SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).

For Hogs A-1 Hog Feed 10% dry buttermilk) will save from $6 to $12 on fattening each hog.

Why Hens Won't Lay

P. J. Kelly, the Minnesota Poultry Expert, 120 Kelly Bldg., Minneapolis, Minn., has published a book, "The Tale of a Lazy Hen." It tells why the hens won't lay and how to make them lay every day. Mr. Kelly will mail the book free to anyone who will write him.

tion of egg exhibits is worth while considering. Exhibits of all kinds are to encourage and develop a better, more standardized grade of animals or products. The standard egg exhibit is a plate of one dozen. Uniformity of shape, size and color; weight; texture of shell; and the condition of the egg in reference to its freshness, are the main points to be considered in selecting a dozen show eggs. Most of the points are external, but the judge has a right to, and should, break one egg in each dozen to determine its freshness. Though the standard market weight of a dozen eggs is 24 ounces, eggs weighing 28 ounces are preferred in the show room. A good scale of points to use in judging or selecting show eggs is as follows:

Uniformity of shape, 15; size, 15; color, 15; weight, 20; shell texture, 15; condition, freshness, 15; color of yolk, 5; total, 100.

The three best pens in each of the principal varieties are as follows:

Barred Plymouth Rocks

Jules F. Francais, 1675; Richard Allen, 1675; Tom J. Adamson, 1645.

White Wyandottes

Obed G. Knight, 1815; Brayman Farm, 1588; F. W. Harris, 1556.

Rhode Island Reds

Richard Allen, 1695; Pinecrest Orchards, 1534; Pequot Poultry Farm, 1430.

White Leghorns

Braeside Poultry Farm, 1755; Hollywood Farm, 1759; J. O. Le Fevre, 1739.

Miscellaneous

Ore Agricultural College (Oregons), 1935; H. P. Cloyes (Buff Wyandottes), 1545; Cook & Porter (Buff Wyandottes), 1510.

HOW TO INCREASE EGG PRODUCTION

Hens cannot produce eggs profitably on grain alone. The grain ration must be supplemented by protein concentrates. Recent investigations show that the source of protein also influences egg production. That is, protein concentrates of animal and vegetable origin differ in ability to stimulate laying. A series of tests have been conducted at the University of Missouri college of agriculture to determine the relative efficiency of animal proteins, represented in experiments with meat scrap and sour milk, and vegetable proteins, represented by oil meal, gluten and meal and cottonseed meal, in rations for egg production. Feeding tests have shown that:

Meat scrap and sour milk are the most economical sources of protein for laying hens.

It is poor economy not to furnish the laying hen a protein concentrate of animal origin.

Vegetable proteins alone cannot be fed economically.

Twenty-five per cent meat scrap is a sufficient amount of animal food in a dry mash.

There is no evidence that vegetable proteins, alone or in combinations with animal food, increase egg production.

One pound of eggs can be produced with every four pounds of feed if the proper ration is fed.

According to these tests, 100 pounds of sour milk is worth 5.4 pounds of meat scrap.

SUCCULENCE NEEDED

Plenty of succulence is needed in poultry food for strong egg production. Succulence is a food material found in the original vegetable juices of plants—such as cabbage, lettuces, sprouted oats, mangel beets, etc.

Succulence performs two definite purposes in the ration. It acts as a tonic, increasing the consumption of food by having a definite effect upon the palatability of the ration.

Given plenty of green food, the fowls not only better relish the food, but they digest more of it. The other purpose of succulence is that it provides plenty of water, one of the essential requirements in the ration.

Mangel beets are very succulent, containing approximately from 70 to 75 per cent of water.

Mangels should be cut in half lengthways. The halves can be nailed to the wall (cut side out), with a spike, about a foot above the floor, and the fowls will do the rest.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Chickens Swollen Feet

Is there any remedy for chickens that have sore feet? The trouble seems to be a swelling on the bottoms of feet.—Subscriber, Winters.

The swelling in the bottoms of your hens' feet is caused by jumping from too high a perch or onto too hard ground, or by walking on something hard or rough or sharp that has made them sore. You must get rid of the cause first. If the feet are merely swollen and sore, without pus, soaking in warm, soapy water and applying vaseline or any good salve should relieve them when the cause is removed. If there is pus, the swelling will have to be opened and cleaned with peroxide or witch hazel or warm water containing a drop or so of carbolic acid.—J. A. K.

Pruning Satsumas

I have five acres of Satsuma plums set out in the spring of 1915. They made a vigorous growth and I looked for some crop of fruit last year, but they all dropped off after blooming. I laid it to watering them while blooming. So this year I irrigated earlier, but fruit dropped just the same. They were pruned about the middle of March and I cut well back, all but four trees, but there is no fruit on them. Some time ago I had read in your paper of some men's experience in not pruning and I was inclined to let the whole orchard go, but I was afraid of them fruiting heavily and having to prop the limbs as I did in a young orchard adjoining last year. I like the looks or form of the untrimed trees the best, but now what I want to know is this. Should I cut off some of this surplus growth on these trees right now, the first of September or later? I met a man a short time ago who told me to prune now for fruit buds to form for next year. I sure want some fruit next year. They have three to five shoots four to six feet long sprouted out of each main limb fork.—Subscriber, Anaheim.

I would not prune these trees at all until after the fruit had set. After the fruit has set and is safe from dropping, the ends of the limbs may be cut off with part of the fruit to prevent their breaking and to render it unnecessary to use props. The fact that you have had no fruit for the last few years would indicate that the trees are in excellent condition as far as bud development is concerned. Wherever the branches are too thick and are inclined to droop or fall out of line of the outline of the top I would remove them entirely at this time, that is cut them off clear down to the main branch. If you are going to retain this orchard I would advise you to graft into each tree on one branch a Burbank plum. This would cross pollinate and assure you a good setting of fruit. This was our experience at the government station at Pomona.—J. W. M.

Argentine Ant

Last year I started a row of rhubarb and it did fine for awhile and then it began to dwindle, so I investigated and found ants, a small red-brown ant which eats the under side of the leaves and works on the stalk where it joins the root. I managed to save a few plants and they started off fine last spring, but the ants have started all over again. I have tried ant paste, ant powder, fresh ashes, and floods of water, but without success. Can anyone tell me some remedy for this trouble?—Subscriber, La Verne.

This is probably caused by the depredations of the Argentine ant. It is

Dr. L. D. LeGear's
Poultry Powder

STINSON
TRACTOR

THE STINSON TRACTOR has a greater per cent of reserve power beyond its rating than any other tractor on the market. It transmits its drawbar power through spur gears only, and not through bevel gears. All gears on the Stinson are enclosed in a dust-proof housing and operate in a bath of oil.

There is positively no side draft on the Stinson, the pull being direct from the center of frame. The Stinson Tractor is equipped with the Stinson-Beaver motor with a 4¾-inch bore and 6-inch stroke.

Make Our Headquarters YOUR Headquarters

one of our most serious pests, and would suggest first that inquirer write Agricultural Experiment Station, College of Agriculture, Berkeley, and ask for Bulletin 207, "Control of the Argentine Ant," or any other bulletins the station may have on that pest. In the meantime locate runways and poison with tartar emetic solution, ant paste, or any of the proprietary ant remedies, and also with buhach. Unfortunately the Argentine ant does not locate in large hills, so can not be killed by the wholesale by pouring gasoline into their nests as satisfactorily as other types of ants.

Figs

Here are two figs, one quite large, brown or reddish brown around blossom end and tingeing to green at stem, and a smaller one, a darker fig, purple or almost black, not so good, but would like to know its name.—Subscriber, Los Angeles.

These were referred to Geo. C. Roeding, Fresno, and upon examination he says that the large reddish or purplish brown fig is the Brown Turkey and that the small dark purple one was badly mildewed, so much so, in fact, that it was impossible to identify it. But he thinks it is the Mission. If not that variety, it is likely the Rose Blanche.

Cubic Feet in One Ton of Straw

Will you please give me the number of cubic feet in a ton of barley straw?—Subscriber, King City.

It is impossible to give any definite rule; just as it falls from the separator, probably 600 cubic feet. Hay freshly stacked in the ordinary way usually runs around 500 cubic feet; when settled, 400 to 450 cubic feet.

Citrons and Melons for Cows

Will you kindly give me advice as to feeding citrons and musk melons to cow? Are they worth anything or will it hurt the cow, especially the citrons?—Subscriber, Encinitas.

Squashes, pumpkins, and melons have much the same feeding value as mangels and large beets. Citrons have about half as much food value as pumpkins. Greater value is secured when the seeds are fed, this notwithstanding there is a tradition among some farmers that pumpkin and melon seeds increase kidney action and tend to dry up cows. Henry's "Feeds and Feeding" says "The seeds contain much nutrition and should not be wasted."

Nitrate of Soda

Can you advise me of the description of the mineral nitrate of soda, in its natural state, or where I can obtain the information? I think I have located a ledge of it.—Subscriber, Sanger.

This could best be answered by the chemists of the University of California, and we would suggest to inquirer the sending of specimens to that institution.

Seed in Tomatoes

How much seed does a ton of tomatoes contain, and how many packages of seed will one pound make?—Subscriber, Lodi.

This is a question to which it is impossible to give definite answer, for the number of seeds in tomatoes varies immensely with the variety. One dealer went so far as to advertise his tomatoes as almost seedless. The number of packages to the pound is determined by the variety and quality of the seed. That can be determined easily by taking a number of packages and weighing.

Grape Syrup

Are there any large manufacturers of grape syrup? If so what are their names?—Subscriber, Los Angeles.

We don't think the manufacture of syrup from grapes is as yet conducted in a large way. In any case we are unable to give the names of large manufacturers.

Grape Wine

I would like to make some grape wine for family use, say one-half of one barrel. Will you please give me directions for making it?—Subscriber, Wasco.

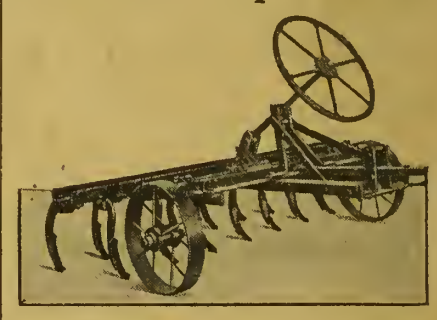
The agricultural experiment station and state viticultural commission have issued bulletins on various wine making problems, but we think as a rule these are of a technical nature. We think by writing State Viticultural Commission, Sacramento, or Prof. F. T. Bioletti, University of California, Berkeley, it is possible a simple homemaking method may be secured.

Kissing Bug

Am sending specimen of a very poisonous bug. Can you tell me the name of it? Its bites cause a great deal of painful swelling and itching. I have heard that three or four of these bugs have enough poison to kill a person. I believe they live in the sage brush and are carried into the house on the clothing and then seem to hide in the beds.—Subscriber, Lancaster.

This is one of the "Kissing Bug" or "Sassing Bug" family. Its bite or sting is usually not more severe or painful than the sting of a bee, but it is certainly not companionable. Usually this insect lives upon other insects and out of doors and on trees, though sometimes it infests houses for the sake of preying upon bedbugs, to which it is distantly related. If the infestation is serious they may be cleaned up by thorough fumigation.

Brenneis'
Special Heavy
Tractor Implements



The Brenneis Orchard Tractor Cultivator made in two grades for light or heavy tractors and five sizes.

Your tractor will give best results if you use farm implements made especially for California soils.

Since 1898 we have been manufacturing a line of heavy duty bean, beet and orchard implements—tools that are built solid and strong to stand up under western conditions. A large and complete stock of extras for all of our implements is always carried on hand so orders can be promptly filled. We make special farm tools to order. Send for our free catalogue or call on our nearest dealer.

FARM LANDS FOR SALE

A BIG LAND OPENING
COWS, HOGS AND A BANK BOOK.
Your dream of life, of ease, comfort and independence await you at
BIRMINGHAM,
On Port Susan Bay, Snohomish County; 6000 acres of the best land that lies out doors; a 2 hours' ride from Seattle places your feet on the richest, most productive soil in the whole state of Washington; rail and water transportation; near paved roads, schools, churches, cannery and condensary; 3½ miles of waterfront and finest beach on Puget Sound; 20 miles of beautiful lake shore, surrounding 8 picturesque lakes; these lakes teem with trout. Get in on the first choice for $35 per acre and up; 10 yearly payments, 6 per cent interest.
This is but the beginning of the story of Birmingham. Send to the owners for illustrated literature. BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

400 acre stock and grain ranch 3 miles Pleasant Valley R. R. station, Mariposa County, California; 100 acres cleared and tillable, nearly all of the 400 acres could be farmed if cleared of the large oak and other trees, wood sells for $12 per cord at station, 3 and 6 room house, large barn, and out buildings, black smith shop and tools, ranch fenced and cross fenced, part hog tight, hogs never have cholera here, family orchard and garden irrigated from springs. Average rainfall 29.88 inches; grapes, olives, almonds, etc., grow without irrigation, feed in pastures and free outside range adjoining knee high, elevation 1500, no alkali or hard pan, ½ mile school and church, $30 per acre including 300 goats, 3 horses, 3 head cattle, turkeys and chickens and all farm implements. $3000 cash, balance long time 7 per cent. Fred B. Palmer, owner. Coulterville, California.

For Sale — Forty acre ranch seven miles from Modesto, Stanislaus County, on main highway, paved to within one-fourth mile. Thirty-five and half acres fine alfalfa, one and half to be planted this season, two acres mixed bearing orchard. One acre buildings and corrals. Dairy barn for forty cows, separator room, etc. All complying with new dairy laws. House, barn for five horses, calf shed etc. On main irrigation lateral. Very near modern school. Fine drinking water. One-third cash, balance long term seven per cent mortgage. Deal with owner. No agents. Will be glad to have friends show intending buyers the ranch. Write Carl G. Meiners, Meiners Rancho, Ojai, Ventura County, California.

Ranches — Large and small, improved and unimproved in all parts of California for sale on the easiest kind of terms. Might consider other property, either real or personal as part payment. Pacific Coast Land Co., 829 Hearst Bldg., San Francisco.

20 acres deep silt land, joining good town on the South; 10 a. alfalfa, 10 a. grain; 300 feet to railroad station. Plenty of water for irrigating Soft water piped on place. Price right. Chas. McNeely, Alpaugh, California.

Dairy Farm, fully equipped, 40 acres near Manteca, 25 acres alfalfa, balance ditched and checked, $11,000; $2500 down, balance long time. Walter Buchanan, Ripon, California.

For Sale—Coachella Valley fig and date ranch. Best fruit proposition in Southern California. Bears fruit from May to January and brings top prices. A. L. Wood, Indio, California.

Be Patriotic, Raise Stock on productive government land, plainly marked on county sectional maps. $2.50 ANY county. Booklet, particulars for stamps. Write Joseph Clark, Sacramento.

RABBITS

Go Into Business for Yourself — Raise rabbits for meat and fur. Raise stock for us. We buy all you raise. Orders booked now for March delivery. Our booklet mailed for 10 cents. Los Angeles Fur Farm, Dept. C. C., 2669 N. Griffin Ave., Los Angeles.

For Sale—Rabbits. New Zealand Reds, extra large, fine color, none better, all young stock. $2.50 to $5.00. Order from this ad. Mrs. Emanual Smith, Etiwanda, California.

For Sale — Flemish Giants $1.50 each. Good stock. Low Prices. R. A. Fuchs, Rescue, El Dorado Co., California.

For Sale — Rabbits, New Zealand and Flemish Giant, young stock. Paul Kruger, Watsonville, California.

AGRICULTURAL IMPLEMENTS

IMPLEMENTS AND RANCH SUPPLIES. Samples and slightly used. Four floors. Large stock. Liberal credit. Save 50 per cent on some. No branches.

MACHINERY

FOR SALE—USED MACHINERY
Guaranteed to do as much work as new.
WINDMILLS—8 ft., $32.50; 10 ft. $42.50; 12 ft., $65; 16 ft., $125; 8 ft. aermotor and steel tower, $59.60.
PUMPS—Bulldozer, 18-in. stroke, $95; double-acting Ames, $145; old-style single Jack, 24-in., $55; 2½-in. rotary, $38; two-stage vertical B. J., $150; 7-in. vert. Krough, $175; fine 6-in. horizontal, $125.
RANCH TOOLS—Single 2, 3, 4 gang disc and moldboards; plows, fine shape; 30 spring tooth harrows, some new; 4 Killefer choppers; 4-horsepower gear, $40; brand-new John Deere chisel cultivator, cost $120 new, our price $85; single-disc cutaway harrow, $29; double 32-disc harrow, $78, cost $200. Not everything, but everything we advertise.
TANKS, TANKS—We do not advertise "by far the biggest lot of junk" in the city, but real tanks. Used redwoods, new and used iron tanks, for less; 4500-gal. heavy galv. with top, $95; 6000-gal. galv., $120; 25,000-gal. redwood, $125. DEMMITT CO., office 120 N. Main, upstairs. Yards, 816 Yale, Los Angeles. Also buy serviceable material.

REMANUFACTURED PIPE
All sizes, standard pipe, and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices.
WEISSBAUM PIPE WORKS,
169 Eleventh St., San Francisco.

For Sale, Holt Caterpillar Model 18. Has been entirely rebuilt by the Holt Mfg. Co. For information or demonstration phone owner, G. F. Blackwood, Glendora, or Holt Mfg. Co., Los Angeles. Might take good team as part payment but nothing else.

For Sale — Samson Sieve Grip Tractor large size used only few months. No abuse, good mechanical condition. Also practically new four disc power lift P. & O. plow. Address Box 56, Tehachapi, California.

Gasoline Engines, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

For Sale—1914 12-25, I. H. C. Mogul tractor and 4-14, power lift, P. & O. plow. All in good condition, $1500. Address Box 174A, Rt. B, Visalia, California.

MISCELLANEOUS

Farm Letterheads at Very Small Cost—Like every farmer needs. Printed with your specially designed name, a view of your farm, live stock, poultry or agricultural products. Why be without attractive letterheads like up-to-date farmers are using when they can be had so cheaply? Write for samples. Frank E. Brown, 1377 Palm Terrace, Pasadena, California.

Fords—Get 10 miles more per gallon, with our wonderful fuel saver, and no carbon. Anyone can attach in 15 minutes. 10 days free trial. You take no chances. Agents wanted in all rural districts. You can make big money easy. Order one today. Sample $5.00. Williams Company, 829 Hearst Building, San Francisco.

Incubators For Sale—Ten Model 83 Petaluma Incubators. 504 egg capacity. Make offer on all or part. C. Paulson, Box 134, R. 3, Sebastopol, California.

To Reduce the high cost of living, send for our Wholesale to Consumer Catalogue. Smith's Cash Store, 112 Clay St., San Francisco.

WANTED

Wanted — Ranch Foreman familliar with beet, grain and hay ralsing. Must also be good with stock and handling men. Address R. E. Boyle, Montana Land Company, Hynes, California.

Herdsman Wanted—Single man preferred. Could use a married man with small family. M., care Cultivator.

Wanted — Seven to twelve good dairy cows. Chas. A. Miller, R. F. D. No. 1, Ontario, California.

SEEDS AND PLANTS

Early Amber Sorghum makes the best sllage and produces the greatest tonnage per acre. Recleaned seed 9c per pound f. o. b. Stockton. Fancy recleaned Sudan seed at 18c per pound f. o. b. Stockton, in lots to suit. Aurora Seed Mill, 48 N. Aurora St., Stockton, California.

Seed Grain — We can make attractive prices on seed wheat and Winter or Gray oats and other field seeds. Have a full line of nursery stock. Supply of seed grain will be limited. Write now, 28 years in business. Carlton Nurseries, Carlton, Oregon.

50,000 Yellow Calla Elliottiana Bulbs. William Richard, 438 River St., Santa Cruz, California.

Peruvian and Common Alfalfa Seed—Specialty. Write for prices and sample. Box 501. Fowler, California.

LUMBER

Lumber-Sash-Doors-Plumbing - Supplies—Building materials of all kinds. New and second hand "A"R.W. shingles 60c per bundle. Send list for estimates. Dan P. (Mission Street) Dolan, 1620-1650 Mission Street. San Francisco.

GOATS

Toggenburg Milch Goats — Rae P. Williams, Federal Realty Building, Oakland, California.

ENGINES

Several New and Slightly Used Engines. ARNOTT & CO., Implements, 112 S. Los Angeles St., Los Angeles.

Black Orpingtons Lay, Weigh and Pay—Prize winners at leading shows. Write for mating list. IVEYMOOR FARM, San Leandro, California.

Buff Orpingtons, Buff Ducks, Bourbon Red turkeys. The Ferris Ranch, S. Reservoir, Pomona, Cal.

FOR LEASE

To Lease—On shares. Large dairy and grain farm. Box 175, Tipton, Tulare Co., California.

TO FIND NUMBER OF BOTTOMS

To figure the number of bottoms which can be pulled, divide the draw bar pull by the cross section of one furrow, multiply by the draft per square inch of cross section of the furrow.

Example: An 8-16 horse power tractor to be used on the basis explained must have a pull of at least 8x180, or 1440 pounds to make good its rating. Plowing is to be done in clover sod, six inches deep, and the pressure per square inch on the plow is seven pounds, according to the foregoing figures. Thus, the cross section and depth of plowing (14x6) multiplied by seven (draft per square inch), equals 588 pounds. Fourteen hundred forty pounds, the draw bar pull, divided by 588 equals 2.4. Thus we can safely estimate the tractor's ability to pull two 14-inch bottoms.

EVERY IDLE ACRE HELPS THE ENEMY

Let us cultivate every available acre of land. Do not let labor shortage hinder. Let machinery do the work. The idle acres of America can grow more food each year than all the enemy's submarines can destroy.

Household Department

COME

Written for California Cultivator
By Ida May Blake

We'll live awhile in the mountains,
Live near to nature's heart.
We'll drink at her icy fountains,
Far from the busy mart.

We'll learn to love her better,
Dear heart of mother earth.
When free from cares that fetter
We'll learn her priceless worth.

Oh ye who seek for pleasure,
In hot and crowded hall,
Oh come and share the treasure,
That God provides for all!

There is no play to equal
The moving picture shown,
With story, plot and sequel
Right here at nature's throne.

And sweetest music lingers
All through the golden hours,
That is not made by fingers,
But birds and bees and flowers.

Then evening gathers slowly,
The woods are hushed and still.
It is a temple holy,
O worship, ye who will.

CUPID, 1ST; SAFETY, 2ND; TIME, .00¼

Continued from last week.

The speedometer registered 23 during the homeward drive. Ferdie returned to the garage in gloom. He had violated his unspoken pledge. At the garage he encountered Jack.

"Y'ought to have seen him," Jack was relating to the garage man who wes peering under the hood. "Chased me 22 miles and I had to touch 65 on a country road to shake him off. I'm driving north for the next two weeks until he forgets."

"Some boat this, Jack," said the admiring one, "some sub-chaser; some scooter; some ——"

His supply of expressions having been exhausted, he hesitated and Ferdie made his exit.

The following afternoon Ferdie asked Betty: "Do you really enjoy speedy driving?"

"Why," she hesitated, "why—yes, since you ask, I do, at times, although of course I perfectly adore riding with you. One sees so much of the country and enjoys the scenery * *"

"Very well," said Ferdie, with an accent of finality.

On the following day one of the downtown automobile agents received a call. Ferdie, being in the brokerage way and accounted worth while, in money and in other ways, received deferential and preferential treatment.

"Of course, Mr. Maypole," he said disparagingly, after listening for some time, "of course we can do it, but it seems ridiculous—"

"Very well," said Ferdie, with additional finality, "do it, and do it as soon as possible. I will attend to the ridicule."

Two weeks later it was rumored in the Clifton "set" that Ferdie was driving a new car. There was some curiosity concerning it. The wagering at the Country Club was six to five that he had found his touring car too fast and had purchased one with an automatic speed regulator. Several reported having seen Ferdie's new car at a distance. The garage man, being interrogated by Jack, declared the old car had been standing idle and that no new one had been placed under his tender (more or less) care. Betty La Clain was frankly disturbed because Ferdie had not honored her with an invitation to take the first ride. A week passed, then Jack arrived at the Country Club in glee.

"I've seen it," he declared. "It looks like a fliver hitched behind a truck engine. I was so busy looking to see whether it has a cowcatcher or a fender that I didn't notice whether it has tires or cogged wheels like a road roller."

Clifton spreads over the crest of a very beautiful hill, one of a semi-circle of demi-mountains that meet the river at either flank and, with the river, form a circle. Within this circle lies Cincinnati, and over the river rise the mountainous hills of Kentucky. Deep valleys lie between the hills and beautiful driveways wind through them, some leading down to the city by steep, winding inclines. Far over to the east, where the range of hills breaks suddenly with an almost sheer drop to the river, is Eden Park, and along one side of this park Gilbert Avenue is carved from stone and leads downward to the city. From this approach to the hill fastnesses where the wealthier city folk live one may reach Walnut Hills and Avondale, and, passing through or around them, may descend into wonderful valleys.

It was in one of these valleys, far out beyond the Zoological Gardens, that Fate overtook Jack and Ferdie and Betty. Jack had been making the skylines look like blurry movies, and had been compelled to stop because of an overheated engine which refused to resume operations. He had toiled and tinkered, and not a purr could he arouse in the engine. The day was hot. Betty was hot and cross —"Red Cross," Jack averred in a futile effort to coax a smile from her. Already she was hours late to the luncheon Jack had promised she would not miss. Jack had abandoned his efforts to resuscitate the engine and was sitting on the grass enveloped in gloom and grease, when from the northward came the sound of an automobile proceeding sedately. Presently it emerged into view. The nearer it came, the more the gloom lifted from Jack's face.

"Look who's here," he chortled. "Little Ferdie, the Speed Demon, in his 1492 model ash-cart."

"Oh, Mr. Maypole," said Betty pleadingly, "please, will you take us into town? Jack—Mr. McClurg's car is broken and I have a very important engagement—"

"Certainly," said Ferdie freezingly. "Delighted. Climb in."

"Better turn on the lights," suggested Jack. "They're strict about it in the city and it's only seven hours until dark."

"I assume you are in a hurry?" queried Ferdie softly.

"Not particularly," retorted Jack. "I have an engagement after dinner, but it doesn't matter. We may catch a street car at the limits if we get too late."

"I'll strive to take you in in time," said Ferdie, his lips setting in a straight line.

"Why don't you carry a sleeping trailer?" ask Jack insinuatingly.

"All ready?" asked Ferdie, as Betty and Jack settled into their seats.

"A little motion," Jack ordered.

Things commenced to happen. The car leaped forward fifteen feet, seemed to hit the ground, took another leap, and shot toward the crest of the hill at 60 miles.

"Look out!" yelled Jack. "What's the matter?"

Betty, her head snapped back by the first lunge of the car, let out a little screech and closed her eyes.

For the next ten minutes the landscape simply flowed past. The air was reeking with strange noises and rattles. They dropped down into the valley going 70 miles an hour, struck the street car tracks and flashed up past the Zoological Gardens with speed scarcely diminishing under the strain of the incline. Jack was striving to clamber from the rear seat into the front, thinking that either the car had run away or that Ferdie had gone crazy. A wild lurch, with the car tipping onto two wheels, hurled him back.

"He's crazy," he shouted to Betty, who was clinging to the hand rail and half sobbing.

"Some speed, some boat!" yelled Ferdie. "Hold tight now, I'm going to open her up."

They were doing 70 through traffic in Walnut Hills.

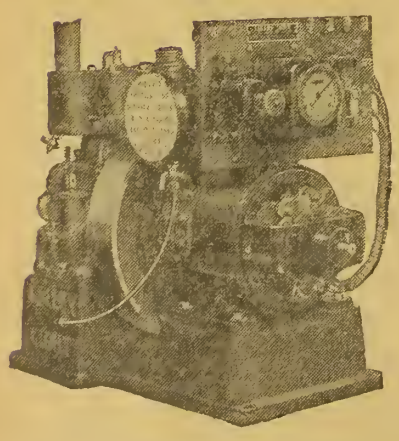
"Slow down," yelled Jack. "Shut off the gas, she'll stop."

He still was laboring under the impression that the car was beyond control.

"Keep your nerve," screeched Ferdie, grinning as he flashed a quick glance. "She's just warming up."

They leaped into Eden Park, making a noise like a cyclone hitting a tin roof factory. Nurses, baby carriages and pedestrians scattered half a mile ahead of them. Automobiles took to the grass. Past the Art Museum they went down the steep grade to the edge of the reservoir. At the water's edge Ferdie swerved the car so that it tilted as if to roll into the lake, righted, and shot under the high bridge and down grade out of the park and onto Gilbert Avenue. Another sickening lurch, a half skid, and the car righted itself at the edge of the

Satisfaction Assured in Advance



Generating plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.

It is a fact that Lalley-Light usually finds preference among those thoughtful farmers who are regarded as neighborhood leaders.

It is not hard to understand why.

The man who seriously looks into the electric light situation discovers that Lalley-Light has been in successful farm use for more than seven years.

He hears it well spoken of everywhere it is known.

He learns that faithful, year-to-year service and economy are the experience of Lalley-Light users.

He receives the impression that he would be entirely safe in investing in Lalley-Light.

He accepts these things as actual advance assurance of his own future satisfaction.

In reality, they are exactly that. For Lalley-Light satisfaction probably approaches 100 per cent as closely as it can be approached.

Never was the need for Lalley-Light so imperative as now.

Farm labor is scarce. Lalley-Light saves labor by supplying the power to do much necessary work.

Farm products and farm buildings are more valuable. Lalley-Light safeguards them by removing the fire risk entirely.

Lalley-Light brings to the farm a score of conveniences and comforts that only electricity from a wholly dependable plant can bring.

In addition, it has its own exclusive advantages which the nearest Lalley-Light dealer will gladly demonstrate and explain.

Write us for his name, and for complete details.

Look for the Lalley-Light demonstrating exhibit at your state or county fair this fall.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

declivity and turned down the steep, winding roadway toward the city.

Betty's screams had ceased. She was huddled on the floor, eyes shut, hair flying. Jack, after three efforts to clamber over into the front seat with a wild idea of overpowering Ferdie or shutting off the gas, crumpled down beside her and waited for the shock.

The car lurched around the turn at the foot of Gilbert and turned across the maze of tracks in Deer Run Valley. A switch engine got out of the way just in time to escape demolition.

"Whoopee! Some boat!" yelled Ferdie.

The remainder of the ride was a nightmare to the two passengers. No one recalls accurately all the details. Policeman Schermer says the big car, sounding like a boiler factory running away, emerged into Fountain Square three times, threw a mail wagon into Mabley's windows, went over the fenders of two street cars, and vanished going down hill on Vine street at 60 miles an hour after tearing down a lamp post. He says that, on the second time around the square, he threw his club at the driver and that the club hit the front of the car the next time it came around.

The evidence of other witnesses is to the effect that, going down Vine street hill toward the river, the car slowed down to 50 miles an hour, took the front end off a truck, caused three horses to try to drag wagons into stores, turned onto the Suspension Bridge after missing a street car half an inch, made three complete revolutions when it skidded while making the turn onto the bridge, and caromed off the railing before righting itself. The bridge police report that forty persons were climbing over the railings ready to jump into the river, but that the car had passed before they could make the leap.

Reports from Covington are hazy. Beyond a popcorn wagon reduced to kindling wood, a hand cart that lodged in the lower branches of a tree and a few minor traces the trail consisted only of noise and burned gas.

Near the Latonia race track Ferdie slowed down to get gas and came to a stop within half a mile after passing the filling station.

"Let us out," clamored Jack as Ferdie whirled on the sidewalk, making the turn at 20 miles an hour. "Stop her."

"I thought you liked speed," said Ferdie. "Wait until I get more gas. There's a good road on beyond."

"You're crazy," yelled Jack. "What do you want to do—kill us?"

"I always think," said Ferdie, addressing the open air as he stopped the car at the filling station, "that persons who talk of Safety First lack the nerve to drive faster than 20 miles an hour."

"Nerve?" said Jack. "Nerve doesn't consist of trying to kill people. Miss La Clain, get out. I'll hire a car to take us back. I won't ride with a maniac."

"Miss La Clain just dotes on fast driving, don't you, Betty?" asked Ferdie.

"She shall not ride back with you," proclaimed Jack.

"Perhaps," said Ferdie softly, "Miss La Clain should be consulted before giving orders."

"Are we home?" asked Betty suddenly opening her eyes. "Oh, my hair must be a fright. I've had a perfectly gorgeous—why we're over in Kentucky."

"I thought you would enjoy a little speed—a little motion, after so much slow-poke riding," said Ferdie.

"It was perfectly magnificent," said Betty.

"You shall not ride back with him," stormed Jack. "He couldn't get me into that thing for a million."

"I shall ride back with Mr. Maypole," said Betty, being unaccustomed to receiving orders.

"Thanks," said Ferdie triumphantly. "I'll drive carefully and try to choke her down to 40."

The return trip was over the other bridge. What transpired during that more sedate journey is not accurately stated, but, as the car, minus only one headlight and a few fenders, rattled up into Clifton, Betty said:

"Oh Ferdie, it was just perfectly gorgeous of you to do it to show me you had the courage, but—afterward, dear, let's buy an electric." — Milestones.

Save Iron and Steel
Help win the war

Make the old range "do" another year.

The iron you save is war material. The space you save in the freight car is needed for war shipments.

If your old range is a Majestic, you probably don't need a new one; a few repairs will make it O. K.

If your range is not a Majestic, and you can't make it do any longer, buy a Majestic, because it *saves fuel, saves food* and *saves repairs.*

Saves fuel because the riveted oven is airtight. No fuel is wasted through escaping heat. Saves food because it bakes perfectly and evenly. Saves repairs because it is made of unbreakable malleable iron and *rust-resisting, charcoal iron.*

Sold by leading dealers in every County of 42 States.
Majestic Mfg. Co., Dept. 203 St. Louis, Mo.

If your Majestic needs repairs get them from a Majestic dealer and insist on genuine Majestic repairs — not light, inferior parts, made by *scalpers.*

Furniture and Home Furnishing CATALOG

Here's a book that will help you make your home more comfortable—a book that's vastly different from any mail order catalog of Furniture you've ever seen.

It pictures hundreds and hundreds of furniture pieces and home furnishing articles as they actually are because every illustration is a reproduction from an actual photograph of merchandise in our vast stocks.

The complete and painstaking service afforded by Barker Bros.' Mail Order Department gives you almost the same advantages as though you shopped upon our floors in person.

The Mail Order Service of Barker Bros. has a staff of expert buyers whose one mission is to satisfy YOU. The idea upon which our Mail Order Service is conducted is, literally, to "send our store to those who cannot come."

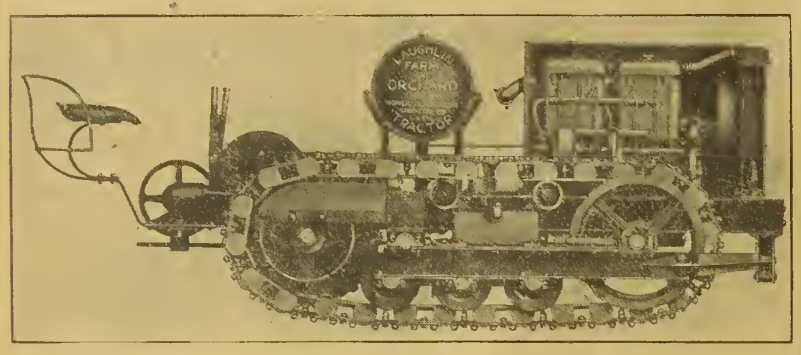
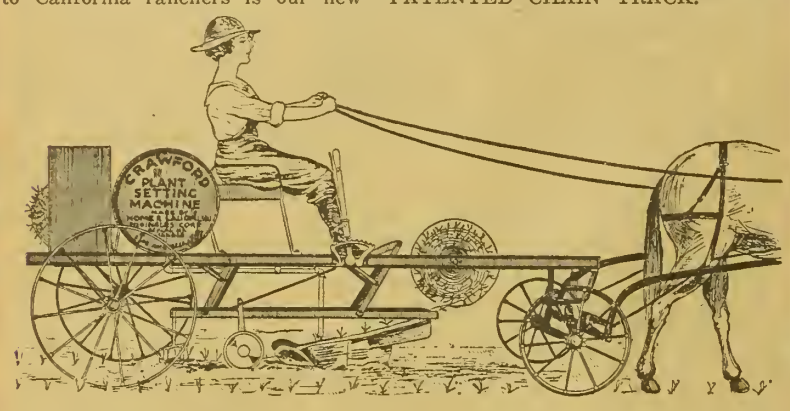
Laughlin's "Little Husky" 8-16 Tractor



The Homer Laughlin Engineers Corporation of 2652 Long Beach Ave., Los Angeles, will demonstrate the "Little Husky" tractor at the Tractor Demonstration, Sept. 17 to 22. This is not an assembled machine. It is made complete in Los Angeles. Dealers and farmers will be offered the best factory service. A feature of our tractor that will commend itself especially to California ranchers is our new "PATENTED CHAIN TRACK."



We will also exhibit the Crawford Transplanting machine, an implement that will do the work of 60 men per day in transplanting cabbage plants, onions, etc.

HAY

Under date of September 7, Scott, Magner & Miller says:

Receipts past week, 1611 tons. Although these receipts are very light for this season, yet the market is slow and inactive. There is a little demand in the interior for hay but this is being furnished direct from shipping points and does not reach San Francisco. The government is using some hay right along, but owing to the fact that a great many animals have been moved from the Philippines and Hawaii, the usual trade for these places is much lighter than formerly. In fact, the trade for the Philippine Islands that used to require considerable hay is practically nominal at present.

Offerings of alfalfa are becoming heavier as the season advances and new crops are harvested. The fourth crop is now being baled and is reported to be excellent quality as well as satisfactory in quantity.

Straw is seldom seen on this market and there is no local demand for it.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling must be added according to conditions:

Fancy Wheat Hay (large 5 wire bale) .....26.00@27.00
No. 1 Wheat or Wheat and Oat Hay .....23.00@25.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@22.00
Choice Tame Oat Hay .....24.00@26.00
Other Tame Oat Hay .....21.00@23.00
Wild Oat Hay .....19.00@23.00
Barley Hay .....19.00@23.00
Alfalfa, first cutting .....16.00@20.00
Alfalfa, second cutting .....22.00@24.00
Stock Hay .....18.00@21.00
No. 1 Barley Straw, bale .....50@80

GRAIN AND FEED STUFFS

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard white—	Per cental.
No. 1	3.66⅝
No. 2	3.61⅝
No. 3	3.55
Soft white—	
No. 1	3.63⅜
No. 2	3.58 1-3
No. 3	3.51 2-3
Club and Sonora—	
No. 1	3.60
No. 2	3.55
No. 3	3.48 1-3

For sacked grain add 9 cents per bushel of 60 pounds to above prices. Deduction of three-fourths of a pound is made for weight of standard grain bag. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to its merit.

Barley — No. 1 feed, 2.37½@2.45 per cental; milling, 2.55@2.60.

Oats — Red feed, 2.55@2.65 per cental for ordinary and 2.75@2.85 for choice; seed do, 2.90@3.10, with recleaned at 3.20 @3.40; black, 2.50@2.65 for feed and 3.00 @3.25 for seed; do, recleaned, 3.50@3.75.

SEEDS

Prices in round lots, lb.:
Millet, recleaned .....5@5½
Flax .....8@8½
Hemp .....5½@6
Rape .....2½@5

Citrus Fruit Market

Los Angeles, Sept. 11, 1918.

While lemons have suffered a very serious decline oranges have held their own and have even advanced in price. A great many sales were made around the $9.00 and $10.00 price.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 13,460 cars, lemons 5365, total 18,825. To same date last season, oranges, 37,710, lemons, 7395, total 45,105. Central California this season: oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 845.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending September 9: Apples, 26; mixed berries, 4; cantaloupes, 18; casabas, 8; carrots, 4; dried apricots, 7; dried beans, 26; dried figs, 1; dried peaches, 1; dried prunes, 11; grapes, 554; lettuce, 7; mixed fruit, 19; mixed vegetables, 21; mixed fruit and vegetables, 23; onions, 63; peaches, 170; pears, 102; peppers, 6; plums, 4; potatoes, 136; quinces, 2; raisins, 44; sweet potatoes, 3; tomatoes, 51; watermelon, 29; New Mexico cantaloupes, 2; Utah peaches, 7; New Mexican pears, 2; Arizona watermelons, 1.

There's beauty in the thunder's roll
And in the ocean's roar.
I'd rather hear a ton of coal
That hits the basement floor.
—Washington Star.

They Fit All Tractors

Clark "CUTAWAY" DISK HARROWS

THE Light Tractor Double Action type embraces all features of the heavy engine harrows, adapting them for successful use with *all* Light Tractors.

Once over thoroughly pulverizes every inch of soil, resulting in bigger and better crops. Light Draft.

They have adjustable universal hitch—two levers set all four gangs—draft rods distribute pull uniformily—hardwood oil-soaked bearings in dust proof boxes.

Write for our book "The Soil and Its Tillage" giving interesting knowledge that you will like to have.

Zieglers Tractor Attachment

Pulling 2 14-inch Gang Plows in adobe soil, previous to winter rains

The Ziegler Tractor Attachment makes a solid, substantial tractor out of your pleasure car of any make—costs less than a pair of horses and will do the field work of from 6 to 9 horses—It has 48 inch rear wheels with 12 inch face, fitted with 18 2½ inch grousers which are easily removed for boulevard hauling. Anyone able to operate an automobile can operate this simple tractor. Complete attached to your car $395.

Valuable territory open for live agents.

We will demonstrate the Ziegler attachment on any ranch within 100 miles of Los Angeles.

Write for descriptive circulars, prices, territory reservations and agents' terms.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The scene taken in a Yolo County rice field gives an idea of some of the food and some of the wealth being produced in California. Also an idea as to how more is to be produced may be had by reading the article on California wheat on the third page. California will never come back to its acreage production of a score of years ago when shiploads of grain were carried from the Pacific Coast to nearly all parts of the world, but the state may well use its best energies in securing varieties better adapted to the state in order that we may at least produce our own.

DOLLAR A DOZEN

Ohio University is urging poultrymen of that state who are anxious to secure long money on egg production to get busy at once. The prediction is made that in most Eastern centers one dollar a dozen will prevail before another egg laying season.

STUDENT WARRIORS

Boys in Cultivator families who have finished their high school course should take advantage of the wonderful opportunity offered by the federal government and the state university. There is being formed the Students' Army Training Corps in nearly every college and university of the country. California is preparing for large classes in this corps. The University of California is building barracks, and every young man eligible should enlist. The university is making plans to accommodate a minimum of 3500. Young men enlisting receive $30 per month, housing, subsistence and uniforms. Other educational institutions of the state are building barracks and planning for the same training.

JOSEPH LANE MERRILL

The citrus growers have lost their oldest and most faithful servant. Joseph Lane Merrill, oldest in service and oldest in years, treasurer of the exchange almost since its formation, died in Los Angeles last week. Mr. Merrill was one of the faithful kind who quietly attended to his own work, never took a vacation, and died in the harness at nearly 70 years of age.

SHOOT THEM ON THE SPOT

At the time when the American boys were charging on the Germans at Chateau Thierry a man wearing an American officer's uniform went amongst the men stating the Germans had surrounded them and immediate surrender was necessary. This was afterwards proved false, but the "officer" was not to be found. This was presumed part of a campaign similar to that carried on by Austrian officers in Italian uniform at the time of the great drive against the Italians. To discourage endeavors of this type in the American forces every American soldier is ordered to immediately shoot any officer or any person giving any such orders.

Peace at any price talk at home is practically discontinued, but there is an occasional faint suggestion, and patriotic Americans at home would like some pointers from the officers at the front.

DEMONSTRATION

We have so often chronicled the "biggest ever" that we will let that pass this time, but, really, there was never a tractor and implement demonstration — excepting, possibly, one at Fremont, Nebraska — which surpassed the great demonstration in Los Angeles this week. There are 60 different types or makes of tractors exhibited; there are something over 125 tractors in operation; there are over 1800 implements, one firm alone having over $30,000 worth of implements on the grounds. The spread of tents over a length of a mile and a half, has the biggest circus we ever saw double-crossed several times. Everybody's collar has that rich chocolate tinge along the edge which indicates they are getting into the thick of the dust and learning all about tractors and the implements which they are drawing through the heavy adobe soil.

Next week some glimpses of modern implement operation methods and of the personal side of this great demonstration.

USING THE BUTTERMILK

Some of our readers may recall the visit to the coast, under direction of the dairy bureau of the U. S. D. A., of Mrs. H. K. Davis. Mrs. Davis came to talk skimmilk, cottage cheese, buttermilk, and the helpfulness of these foods which too often are thrown away. We now note that the department of agriculture reports results of these campaigns. Salt Lake City showed an increase of some 250 per cent in the use of these foods; Spokane, Washington, an increase of 1800 per cent; and San Francisco appreciates skimmilk now some 400 or 500 per cent more than she did a few months ago. However. Mrs. Davis reported that Los Angeles was found to be consuming practically all of her waste product, and there was little possibility of increasing their consumption there.

We think we may add that California dairymen have a habit of eating some of their own skimmilk and buttermilk products and we know they have a habit of feeding it to the stock on the place, and that California's waste along this line has been exceptionally small.

CONSCIENTIOUS OBJECTORS

Most of the fool killers have gone to the war, but there is still need of a vigorous swinging of the stuffed club over conscientious objectors—and some other objectors. The most "conscientious" of this bunch we have heard of lives, we are glad to say, on the other side of the Mississippi, in fact, in Maryland. He objected to going to war so conscientiously that he was turned over to a county agent who placed him in a dairy as a milker. He refused to milk the cows because the product was to be used in one of the military cantonments.

COAST PRODUCTS

Notwithstanding California's light rainfall and lowered production of wheat, this entire district, that of the 12th federal reserve, will produce much more wheat than in 1917. The district's production in 1917 was 70,899,000 bushels; in 1918 it will be almost 91,000,000 bushels. On the other hand, barley shows a material shrinkage, dropping from 57,000,000 bushels last year to 51,000,000 this year. Other grain, such as oats, rye, corn, all show a material increase, while hay will show a shortage of about 2,000,000 tons. The district's greatest loss will be in sugar beets, which crop has been deserted by many in order to plant beans, potatoes or other more profitable crops. California alone has this year planted 597,000 acres of beans, a planting greater than last year by almost 40,000 acres. California's planting to rice this year will be about 108,000 acres, or about 28,000 greater than last year. Arizona has planted this year 92,000 acres of cotton, while last year's planting was only 46,000. California's planting this year is 194,000 acres, against 117,000 last year.

THE FUTURE OF THE AUTO

If any reader surmises from the title above that we are a qualified prophet and will answer as to what the future is, we wish to first disabuse his mind; we are only raising the question. Neither are we the first ones.

At the recent state fair the great plot of ground, in former years covered with two huge tents and filled with autos and auto accessories, was this year almost entirely unoccupied. One small tent, partly filled with autos, trucks, trailers and accessories, was only a reminder of former great exhibits. "Why?"

The answer given was: "War, restricted output due to the demand of the federal government, higher prices of tires, accessories, etc." This condition caused many a farmer to inquire as to further restriction and still higher prices. There are now 5,000,000 motor vehicles in use in this country. This is one to every 20 persons. Rural life conditions have been vastly changed by the advantage which the auto has given. In these cars 25,000,000 people, or a fourth of the population, can be transported 100 miles every day. It is impossible to imagine the changed conditions should use of these autos be discontinued, but such a result, even of this world war, is impossible, and while manufacture will be largely restricted we think the auto user, like the wearer of woolen clothing, will wear his tires a bit more threadbare. Better care will be given, and generally, more economical management permit continued use of the gas wagon.

This Week's War Notes

A battle on the Archangel front is reported between American, British and French forces and the Bolsheviki. The Bolsheviki were repulsed and have fled.

An American troop ship carrying 2800 of our soldiers was torpedoed last week. All were saved, the vessel being beached. The attacking U-boat was fired upon and blown out of the water.

Bolshevik forces in Siberia were routed in a battle north of Vladivostock on August 26. The Bolsheviki were said to number some 12,000 and to be poorly supplied with ammunition.

Finland is making preparations to welcome her German king, Henry Charles of Hesse. Through Sweden news comes that "it is expected the new king will open the Landtag in October."

A British steamer, the Galway Castle, en route to South Africa, was sunk last Friday. Nearly 200 persons were reported missing, half of whom are women and children. She was torpedoed by a submarine in a stormy sea.

Austria has made a plea for peace, or rather "to create those preliminary conditions calculated to bring the peace efforts nearer to realization and bridge the gap which at present still separates the belligerents from one another." The plea has been unconditionally rejected by our government.

The Servians are not all crushed yet. The reorganized army, cooperating with French forces and a few Greek troops, captured on Monday three strongly fortified Bulgarian positions in Macedonia, which the Bulgars have held for two and a half years. Later dispatches state that the Allies are advancing on a 12-mile front and have taken 3000 prisoners.

As illustrating the wonderful work of the American-British transport service, General March reports receipt of cablegram from France announcing debarkation at a port of France of 35,000 American soldiers in one morning, with 11,000 more in the afternoon. Of 15 ships entering the harbor that morning 12 were unloaded and ready to return in 24 hours.

The Huns on the western front continue their "strategic retirement with the enemy following though constantly repulsed." The Allies have crossed the Hindenburg line in many places and are near to it in all other sections. Scores of towns have been captured during the past week, and the Allies under General Foch manifest a disposition to allow no respite to the Germans.

It is planned to organize a motor transport corps of half a million men. The war department says: "Men qualified to drive motor vehicles are needed by thousands and men who have had executive experience are wanted for officers. Many men who were given deferred classification in the first draft, but who now wish to get into the army, are finding excellent opportunity for service in the Motor Transport Corps."

Documents proving continuous payment of large sums to Lenine and Trotzky by the German Imperial Bank have been made public by our government. By these it is shown conclusively that these so-called Russian socialists were paid agents of Germany long before the outbreak of the war. Lenine now is openly proposing alliance with Germany in order to repel attacks of the Czecho-Slovak. He says: "In order to save the power of the workers and peasants, we must not even recoil from an alliance with imperialists."

"The Yanks are off," shouted Paris as the American troops started their drive on the St. Mihiel salient, and in just 27 hours the salient which had been driven to threaten Verdun was "off;" the Yanks had captured 500 German officers, troops too many to yet give definite figures on, but perhaps around 20,000, a great number of machine guns and large cannon. It was one of the swiftest actions of the war, and being the first entirely under American command, has attracted the attention of the world. The battle was directed by Gen. John J. Pershing. The boys all say they were simply honoring the general's 58th birthday, and it all occurred on Friday, the 13th.

Early Baart---New Wheat Gives Big Yields

By Norman F. D'Evelyn

FROM all parts of the state gratifying reports of above average yields of Early Baart wheat have been received by the new agricultural department of the Sperry Flour Company, which has launched a statewide campaign built upon the slogan, "Plant More and Better Wheat."

Perhaps the most interesting report south of the Tehachapi is that just received from Robert A. Todd of Los Angeles. He writes:

"I had intended to plant all of my land (in the Imperial Valley) to White Australian but accepted your suggestion in part and planted 50 acres to Early Baart. If I had followed your suggestion in entirety and planted all of the acreage to Early Baart wheat I would have made a great deal more money than I did from my White Australian. We had a few warm days the latter part of April and this greatly damaged the White Australian crop. The Early Baart grew perfectly and yielded 20 sacks to the acre. The berries were plump and commanded the top price from the government. The White Australian berries were small and were classed as soft wheat by the government inspector. The Early Baart was easier to harvest than barley but threshing the White Australian was the worst job we have ever had on the ranch. The straw was as tough as Panama straw, and I should have been unable to harvest it had I not had a Harris harvester of my own.

"I am writing these facts to you, so that in case of inquiry from Imperial Valley farmers you will be in a position to advise them as to my experience with White Australian in the Imperial Valley. The yield from White Australian was much less than from Early Baart. I intend to plant about 600 acres to wheat this fall."

Similar reports from points scattered throughout the San Joaquin and Sacramento Valley have been received.

Warren and Sebbelov have just completed harvesting 800 acres of Bluestem and 50 acres of Early Baart wheat at Riego on the Natomas tract. Both varieties were seeded between November 10 and 20, about 80 pounds of seed per acre. The Bluestem came up about two weeks before the Early Baart and the latter made but half a stand on account, they figure, of dearth of rainfall (subsequent tests here, however, have not shown any difference in time of germination between the Bluestem, California, Australian and Early Baart). However, the Baart soon outgrew the Bluestem and showed a tendency to stool never equaled by any other wheat on the character of soil—heavy adobe with a few inches of sediment on top. Forty-two heads were noted on one stalk and the average was 15 to 20, while the Bluestem averaged from four to six. All heads are large and well filled. The Baart matured two or three weeks earlier and 51 acres yielded 974 sacks, or 19 sacks per acre. A perfect stand of Bluestem in two adjoining fields averaged 14½ sacks per acre. Next year these people are going to plant half their acreage to Baart. They are impressed with the advantage of being able to cut the Baart before the Bluestem gets ready.

One Hundred and Ten Varieties

In the county contest Yolo was the winner. One of the most prominent features was this grain exhibit. A professor from an Eastern agricultural college pronounces it one of the best grain collections he has seen.

On 90 acres of land of red clay and gravelly character north of Chico—land that had been rented at a nominal figure for the last eight or ten years and similar to thousands of acres used only for pasturage throughout the state—the Sperry Flour Company, owner of the property, harvested 512 sacks of Early Baart wheat this year. At $3.75 per hundred this crop is worth $2636.78 which, by the way, is almost three times the appraisement of the whole quarter section made by a man thoroughly posted on values in the vicinity. This wheat went 63 pounds to the bushel. Results on the poor land, especially in a season of extremely adverse climatic conditions, should be a lesson to the owners of similar lands who have regarded them as only fit for pasturage.

Some 2400 sacks of this wheat were taken off 249 acres of land in Colusa County, owned by H. W. Keller of Los Angeles. It weighed well over 63 pounds to the bushel and Keller is holding it for seed at a fancy price. The yield is above the average of the section and the quality so superior that after inspecting it Professor B. A. Madson of the university farm at Davis, the Colusa County farm adviser, and one of the government wheat advisers now on a visit to California are advising the farmers of Yolo, Colusa and Glenn Counties to plant Early Baart wheat.

Moreing Brothers, who have practically 20,000 acres in wheat on the Natomas tract, are thoroughly impressed with advantages of these early maturing varieties. This year on several big fields they have obtained as much as from 2600 to 3000 pounds to the acre.

This high grade, hardy, early maturing wheat is quite new to the farmers and millers of California, but it has become successfully established in Oregon and Washington and is today practically the only milling wheat in Arizona, where it was introduced 12 or 13 years ago. In that state the agricultural experiment station at Tucson has conducted careful, systematic experiments on probably 100 varieties of wheats for ten years, but no variety has been found or developed that would justify displacing the Early Baart, according to the testimony of Plant Breeder George F. Freeman. Conditions have reached the point there that millers insist upon the grain growers planting Early Baart if they expect to sell their output to the mills. The Sonora and White Australian varieties have been displaced by the Baart.

Preparing Seed Bed and Drilling

Modern power and modern implements make possible vastly better preparation of land, and assure larger crops, and the more economical soil handling is encourageing larger planting. Photos by Sperry Company.

Three years ago the Sperry Flour Company began a series of investigations on experimental farms leased by it, so that the tests could be made under actual field conditions, facing all the problems that confront the average farmer. It is worthy of note that the land selected was not the finest type of soil that could be had; on the contrary it was, for the most part, a very ordinary type, made up of red sedimentary adobe, black adobe and shallow red clay gravel.

The Australian exhibit of wheat at the Panama-Pacific International Exposition was purchased for the purpose. Twenty-nine varieties grown by different experiment stations in New Zealand and Australia were contained in the lot. After being treated for gluten and baking qualities in the company's laboratory at Stockton, 13 varieties were selected to be sown. Along with these it was decided to try out the Early Baart.

Three or four of the varieties planted seemed to have the characteristics of suitable wheats for California conditions both as to yield and milling qualities. Gluten and baking tests were taken on 12, which showed an average gluten content of 30.2 per cent, the highest being 38.8 per cent, in a smooth hard Durum variety, and the lowest 35.4 per cent, in a white milling wheat. The high average of gluten content in these wheats was a surprise, as the common varieties of milling wheat grown on the various fields surrounding this experimental plat showed an average of from 19 per cent to 21 per cent wet gluten, which has been the average for this character of land in the various wheat growing sections throughout the state.

No variety has proved out better than the Baart, and sufficient seed has been secured from the various plantings to give considerable scope to the campaign to increase the acreage of it. It is a bearded wheat of rather rank growth with a very heavy leaf. Although the straw is light it appears to be elastic and does not break off or shell out any worse than other California milling varieties. Best of all, it ripens from 10 to 15 days earlier than what have been standard varieties—a most decided advantage in view of California's often short springs and early, hot summers, with not infrequent hot north winds that have a tendency to shrink wheat not well matured. As a matter of fact, this wheat has shown a decided ability to withstand extremely wet as well as dry weather conditions. Only on bottom land are the Sperry experts at all dubious as to the adaptability of this wheat; its rather rank growth might cause it to lodge on river bottom or reclaimed lands.

The campaign now being waged by the pioneer milling company is a contribution to the nation's need for wheat, the foundation of "the staff of life," in the present world crisis. Its three years experiments have provided concrete facts on which to base the educational and field work. Men will be sent into every grain district

Continued on Page 279

A Good Stand

Even in a dry season soil prepared so as to conserve all the moisture may give heavy production.

Agricultural News Notes of the Pacific Coast

Northern California

The second annual Glenn County fair is being held this week.

Paradise, Butte County, reports the biggest pear crop in its history.

Yolo County has found success with two varieties of Turkish tobacco.

The hot weather of late August aided materially in ripening rice.

W. L. Sweet was recently appointed farm adviser for Butte County.

Nevada County women are aiding in the pear harvest.

There is a serious epidemic of anthrax in portions of Glenn County.

Hay fires are reported in many sections.

The rice mill at Gridley, Butte County, is being overhauled preparatory to the season's run.

Rice growers are constructing a $20,000 warehouse near Chico, Butte County.

Water users near Wyandotte, Butte County, are looking for a more adequate supply of water.

The Farmers Union of Gridley shipped a large number of canning peaches to Sacramento.

E. A. Bullard, a Woodland live stock man, consigned a ram to the Salt Lake City sale, which sold for $1000.

Fourteen counties have united in a Red Cross meeting at Sacramento to be held September 25 and 26.

Seven thousand sacks of grain were sunk on a barge moored at a Sacramento wharf.

The farm bureau of Placer County is now placing orders for winter hay supply for members.

Grape dryers are busy in Sutter County. Fifty-five dollars per ton is the usual charge for drying.

The Napa County farm bureau has decided to hold an auction of fat hogs at Napa early in November.

A specialist of the force of the United States biological survey is studying damage to rice crops from wild ducks.

Short courses for dairy farmers will be given at the University Farm at Davis, September 30 to November 8 and November 11 to 22.

The poultry producers of Central California are discussing the advisability of purchasing feed wholesale in order to secure more reasonable prices.

The food administration is investigating disposal of San Francisco's garbage in endeavor to find a means of saving valuable fats and other material.

Water users of Jacinto have secured favorable decision from the state railroad commission in their contention with the Sacramento Valley West Side Company against charges in excess of the legal rate for water.

The Glenn County farm bureau will hold local center night meetings at Willows, September 16; Millsap, 18; Plaza, 20; Grapevine, 25; Larkin, 27. There will be an afternoon meeting at Elk Creek, Wednesday, September 5 at 2:00 o'clock.

Officials of the state horticultural commission and county commission have been called on by citizens of Vallejo to correct conditions in the fruit market there. Complaint is made that the fruit under the top layer is almost invariably poor or bad.

Central California

Canneries are making quantities of fig jam this year.

Kings County expects to furnish about 4000 men in the new draft.

Watsonville, Santa Cruz County, reports light output of apples.

Short courses in agriculture begin at Davis September 30.

Muscat pickers are receiving three and three and a half cents per tray.

Watsonville, Santa Cruz County, held a dahlia show last week.

Nearly all raisin drying districts were visited by damaging storms last Friday and Saturday.

The Woman's Land Army is aiding materially in the harvesting of table grapes in the Lodi section.

Tehachapi's pears are ripening rapidly and that section will have large output this year.

Several thousand tons of raisins have already been delivered to the Associated.

During the last three months three new Granges have been organized in California.

Many Santa Clara County schools have not yet set date for fall opening, deferring opening on account of fruit harvests.

President Wilson has fixed the price for 1919 wheat at $2.20 per bushel minimum. This is the same as the 1918 price.

Tulare's tax rate for the coming year has been fixed at $2.40, an increase of 10 cents over last year's rate.

Several peach growers of Fresno County have turned over their peach pits to the Red Cross for sale to the government.

Packing houses are busy in every fig growing district of the San Joaquin Valley. The harvest promises to be one of the best for many years.

Raisin growers are making contracts for picking; the larger contracts at three cents, some of the smaller at 3½ cents.

Navelencia, Fresno County, is conducting ground squirrel campaign. The pests have been working havoc in all grain producing sections.

Wylie M. Giffen, at the head of the California Associated Raisin Company, has purchased a 1320 acre vineyard near Hanford, Kings County.

Oakdale, Stanislaus County, Almond Exchange has harvested a portion of its crop. That section shipped 14 cars of nuts last year.

State Commissioner of Horticulture Hecke has offer from a San Francisco sporting concern of $1.50 per gallon for dried grasshoppers.

Nine hay stacks valued at $7500 were destroyed near Bakersfield last week. It is thought the fires were set by I. W. W.'s.

San Jose Grange met last Saturday afternoon for inspection by inspecting deputy. A communication from Sacramento Grange was received in which the single tax amendment was condemned.

Fresno has shipped eight cars of peach pits, or rather shucks from which the kernels have been removed. This material, which has formerly been refuse, is made into charcoal used in the manufacture of gas masks for our boys in Germany.

Southern California

Now comes Imperial with appeal for relief from the duck pest.

Imperial Valley will produce about 70,000 bales of cotton.

A few sales of Lima beans have been made at 11½ cents.

Japanese tomato growers have fixed $18 a ton for their crop.

Assistant Farm Adviser Scribner of Los Angeles County is judging livestock at the state fair.

Eight hundred people attended the annual picnic of the Orange County farm bureau at the county park.

The Ventura County farm bureau has fixed $25 as fair price for polling and picking walnuts.

Announcement has been made that the United States food administrator will not set price on beans this year.

Talbert, Orange County, is harvesting the seed from a 180 acre tomato field.

Pomona College will use an orange packing house as barracks for young men receiving military instruction.

Reports from Orange County bean sections indicate crops running lighter than estimates.

Profs. Fawcett and Barrett are giving scaly bark demonstrations in Orange County.

The lima bean crop of the Inglewood district of Los Angeles County was not as heavy as was anticipated owing to the heat early in August.

The Palo Verde Valley, Riverside County, has 12,000 acres planted to cotton. Picking will not begin till October 1.

At the last meeting of the Pomona Valley Poultry Breeders' Association M. A. Schofield of Gardena made an address on poultry feeds.

All Southern California was visited by rain on Friday and Saturday. Beans and drying fruits and some grain were injured.

The Gardena Canning Company was closed two days, September 9 and 10, because of violation of United States food rules.

The serious losses to Southeastern cotton fields will probably result in greatly increased returns to the irrigated cotton fields of the Southwest.

The treasury department has finally made a ruling allowing irrigation taxes to be deducted from income tax returns.

Beekeepers of Ventura held a field meet at Foster Park recently. Beekeepers were also present from Los Angeles, San Diego, and San Luis Obispo Counties.

Bean growers of Southern California will meet in Oxnard at an early date to discuss marketing questions, especially in connection with the government's attitude.

At the recent meeting of the Pomona Valley Fruit Growers' Association action was taken empowering managers to care for groves of men called away to war service.

Bean and other growers of Ventura County recently met at Oxnard to devise some plan by which the labor situation could be corrected. J. P. Dargitz, of the state labor commissioner's office, was present. From reports made at the meeting it was determined that there was a shortage of at least 600 men.

The Coast and General

Fourteen counties in Oregon will hold county fairs this fall.

Branding and roundups are general in central Arizona.

Idaho reports its crop of sugar beet seed all harvested.

Cotton picking is general in Arizona and California.

Pig club members in Oregon unite in ordering feed in carlots.

Oregon's state fair will offer $500 for exhibits made by pig clubs.

Chicago is to hold this week an automotive and accessories exposition.

It is now estimated that the United States will have less than 85 per cent of a full potato crop.

The cacao plantations of Ecuador are in danger of being exterminated by a fungus disease.

Switzerland is rationing cheese, allowing half a pound per person per month.

America's increase in rye production this year will approximate 36 per per cent.

Farmers of Lyon County, Nevada, are cooperating in a plan to reclaim extensive areas now unproductive.

The state farm market bureau of Idaho has received orders for more than 100 carloads of hay.

Wenatchee, Washington, is shipping out 30 to 40 cars of fruit every day.

The Yakima Valley of Washington expects to ship out 25,000 head of sheep before the first of October.

Oregon's crop of hops is very light this season. Some growers are considering leaving unharvested because of the uncertainty of the market.

The state agricultural college of Washington is building a mammoth barracks and mess hall for 600 soldier students.

The Okanogan Valley, Washington, reports grasshoppers a serious pest, over 12,000 bushels of wheat having been destroyed on one ranch.

Germany allows a family to keep one hen without taxing it, but all in excess of that number are taxed 50 eggs per hen per year.

Some farmers on the Truckee-Carson irrigation project in Nevada have made large money on wheat and alfalfa crops.

Canada's output of wheat this year will be 20 per cent greater than that of 1917 and will aggregate about 280,000,000 bushels.

Brazil is greatly increasing its output of sugar. The increase has been from about 5000 tons in 1913 to 130,000 tons last year.

Arizona has 500 acres of bearing oranges and approximately 700 acres of recently planted trees. Ninety per cent of the crop is handled cooperatively.

A big tractor demonstration was held at Portland, Oregon, September 5-7 under the management of the Portland Tractor and Implement Association.

Prune growers of Polk County, Oregon, have formed a prune pool. The minimum price paid for the green fruit will be 2½ cents delivered at warehouse.

It looks as if Ukraine, the granary of Europe, may be losing her reputation, for we note that the price of a pound loaf of bread there is 40 cents and flour is selling at 39 cents per pound.

Farm Advisers Meet in Annual Convention at Sacramento and Davis

Written for California Cultivator
by Robert W. Hodgson

AS A FORERUNNER of the big drive for increased food production in 1919, farm advisers and farm bureau presidents from the 36 main agricultural counties of the state met in a two-day session, September 2 in the Capitol Building at Sacramento and the following day at the university farm, Davis. All who attended agreed that the convention was most successful in organizing plans for the food drive for the winter months and in stirring both farm advisers and farm bureau members to renewed efforts in the winning of the war through increased food production.

As chairman of the committee on food production and resources of the state council of defense, President Wheeler of the state university presided. In his opening address President Wheeler narrated the war activities of the state university along purely military lines. He stated that the university is now giving instruction to army and navy students along eight different lines. Among these activities are embraced three separate schools, housed on the campus, two of which are now in active operation, the third to be added soon. These are a school of military aeronautics and radio work, a naval reserve officers training school, and a school for enlisted men soon to be established.

The college of agriculture is bending every effort to help win the war, having been federalized soon after war was declared. A large number of its faculty are now in active service and many others have cheerfully been drafted into extension work to aid in food production. Among them are a number who are now serving as farm advisers. Every branch of the university is thoroughly organized and engaged in war work.

Work Accomplished Since the March Convention

The greater part of the morning session was given over to the reports from 28 farm bureau presidents present giving a summary of the work accomplished in their counties since the March convention of farm advisers. At that time a number of state wide projects for increased food production were adopted and campaigns have been actively under way during the present season in most of the counties having farm advisers. The reports indicated that in spite of a dry season a considerable increase in food production along most lines has resulted.

Hog Campaign

Due to lack of feed and high prices, at the time of the March convention California faced a marked decrease in the number of hogs. Brood sows and piggy sows were being shipped to the slaughter houses in large numbers. The army and navy needed pork, and word came from Washington to carry on a campaign to stop the slaughtering of such animals. A project designed to accomplish this was adopted at that time. The reports showed that 14 days after the campaign started the stream of brood sows to the packing houses stopped. The whole psychology of hog raisers and farmers was changed. The records show that this campaign induced 5105 farmers to keep 21,099 additional hogs. Of course many thousand more were not sold, purely on account of the publicity given the campaign.

Fire Protection Campaign

This year has been exceptionally dry. Realizing the danger from fire losses to be of exceptional importance in a time of national shortage, a project for fire prevention was adopted at the March convention. An educational campaign was carried on all over the state and fire ordinances enacted. Fire fighting companies were organized and apparatus purchased. The reports showed that in spite of the dry season and incendiarism fire losses have been much less than usual this season due to the farm bureau campaign. Santa Cruz County which has always been recognized as suffering great annual losses from fire, this season was well organized. The losses were lower than ever before in the history of the county. The reports showed nearly 6000 volunteer farmers organized into fire fighters with 61 fires controlled to date, and thousands of dollars saved to farmers with a great saving in hay and grain supplies.

Wheat Campaign

The campaign to increase the wheat acreage in California adopted last fall showed very gratifying results. As a result of the campaign over 100,000 acres additional wheat acreage was signed up. Due to unfavorable weather conditions only 40,000 of this was planted and the average yield was reduced some four bushels, making the total yield of the state 6,240,000 bushels this season as against 7,425,000 bushels for last year. Had weather conditions been normal there is little doubt but that California would have produced a bumper wheat crop.

Silo-Sorghum Campaign

As a result of the campaign to increase the growing of sorghum crops for silage purposes, and for the erection of silos to conserve stock feed, some 650 farmers undertook to grow silage crops. Nearly 20,000 acres additional such crops was secured through this campaign. Approximately 600 farmers indicated an intention to build silos of which 250 have already been constructed.

Labor Situation Discussed

Prof. R. L. Adams, state labor agent, addressed the meeting on the labor situation. Earlier in the season it was felt that considerable losses might occur due to an acute labor shortage. Professor Adams stated that in a few instances, as with the asparagus growers in the delta section, with alfalfa growers and in certain other cases, such losses have occurred but that no widespread losses had been occasioned this season. In fact, the labor shortage has failed to materialize except in certain localized instances confined mostly to the Imperial Valley and the more remote fruit districts. Climatic conditions this season account largely for this condition, since they have resulted in an average crop of only about 80 per cent. Had we experienced bumper crops the labor situation would have been much more acute. Therefore this year furnishes no criterion for judging our needs for next season and this fact should be borne in mind in planning for next year.

Fall Campaigns Undertaken

After considerable discussion, organized effort along two lines was undertaken, two state wide projects being adopted, one having to do with the increasing of wool and mutton production and the other to increase wheat. It was pointed out that at the present time the United States produces less than a third of the wool used in this country. Army and navy needs practically equal our total supply now, leaving little or no wool for civilian use. It requires the wool from 20 sheep to outfit one soldier once. With the program to double our military forces recently adopted, the need for wool will be greatly increased. It is up to the American farmer to raise it. It was decided to accomplish California's quota by inducing farmers to use small flocks on every farm. As sound agriculture nothing is better.

Sheep will live on poor pasturage otherwise wasted, keep weeds down, and the wool pays for their keep, leaving the mutton clear profit. About the only requirements are protection from dogs, and fences to keep them in. An organized campaign to establish a small flock of sheep on each farm will be carried on this fall. The college of agriculture is very much interested in this project and the division of animal husbandry through Prof. R. F. Miller has made arrangements to furnish sheep in car lots to farmers at prices ranging from ten to fifteen dollars. Most of the sheep will be range Merinos, ewes six to eight years old, but other stock may be had at higher prices.

California's wheat quota for 1919 will be larger than ever. A food reserve must be laid up against a time of need. The outlook for wheat as discussed by Mr. Starr of the wheat corporation is very bright. Barley was high last year on account of the lack of wheat and the suitability of barley for a substitute to send abroad. We did not have enough wheat for the tonnage available. Our corn was too soft to make good meal. Barley was the only crop left and its price went high. The 50-50 substitute rule also favored high barley prices.

This year the condition is precisely the opposite. We now have the 80-20 substitute rule and much more wheat. California's milling capacity is three times our present crop. We now have 60 per cent more barley in this state than we can use and it must be shipped out in order to dispose of it. Altogether the outlook for wheat is much better than for barley. Simply planting one-tenth the barley acreage to wheat will give us our quota, but we should double that and go over the top with a margin.

Much can be accomplished by better methods, insuring an increase not only in acreage but in yield. Among such methods are the use of a properly prepared summer fallow, good seed of a suitable variety, and the use of 100-150 pounds nitrate of soda per acre. California must produce her wheat quota.

Bulk Handling of Grain

The farm bureau went on record as favoring the bulk handling of grain as resulting in a great saving to the farmer. One farm bureau center in the state is now building a cooperative grain elevator.

Farm Home Department

A project to organize the country women on the same basis as the farm bureau is being pushed under the able leadership of Miss H. G. Eddy. County women home demonstration agents are to play a similar role to the farm home department as the farm advisers do to the farm bureau. The purpose of the organization as stated by Miss Eddy are first, through organized effort to help our farmer's wives to "carry on," second, to give such women an opportunity to get a broader culture and education, and third, to round out and make permanent the farm bureau.

Agriculture Club Work

R. M. Hagen, assistant state leader of boys and girls agriculture clubs, told farm advisers of the work the boys and girls are doing. Working along exactly the same lines for increased food production as the farm bureau, since March these clubs have accomplished the following: Raised 529 acres grain sorghum, 248 acres beans, 130 acres potatoes, 60 acres vegetables, raised 1855 fat hogs, 3785 chickens, 453 sheep, and 28 calves. Not only have they raised these quantities of food stuffs but they have done it profitably, serving in many cases as demonstrators to the farmers of the vicinity.

After attending such a convention one cannot come away without a realization of the potent force the farm bureau constitutes for the rational development of a permanent agriculture in California. Nor can he fail to note the earnestness and zeal exhibited by the farm advisers, than whom a finer band of patriotic "soldiers of the soil" does not exist.

Stop the Robber in Your Wheat Field

THERE is a robber in American wheat fields that steals millions of bushels of grain annually. But the 1919 wheat crop can be made burglar proof, as far as this particular robber is concerned, and food for thousands of soldiers will be saved. The disease known as smut is the thief and a simple treatment of the seed is the preventive. There are four kinds of smut which occur on wheat and barley, according to the United States department of agriculture, two of which (bunt or stinking smut, and covered smut) are effectively controlled by soaking or dipping the seed in or spraying it with formaldehyde solution. Loose smut is controlled by treating the seed grain with hot water.

Seed to be treated for smut should be cleaned in a fanning mill. Use formaldehyde (40 per cent solution) diluted at the rate of one pint to 40 gallons of water. If the soaking method is used, allow wheat to remain in a tub of the disinfectant 10 to 20 minutes, and barley 30 minutes to two hours. To get the best germination results, the grain should be sown as soon as treated. If this can not be done, it should then be spread out and dried, for improper drying after treatment may injure the seed.

Power Shortage is Fuel Waste
Don't think you're saving by letting your engine, tractor or automobile motor run along short of power. The shortage is probably due to gas escaping through leaky piston rings—and you have to pay for it anyhow.
The surest way to get — and keep — maximum power and save fuel is to install a set of
McQUAY-NORRIS
LEAK-PROOF
PISTON RINGS
The piston ring which is properly designed and constructed to give perfect bearing on the cylinder walls —save friction and undue wear on cylinders.
Your dealer can get you any size or over-size quickly. Over 300 jobbing and supply houses in all parts of the country carry complete size assortments. If you have any difficulty getting them, write us.
McQUAY-NORRIS
Superoyl
RINGS
A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

Correct Lubrication for the Ford Engine

The Ford automobile engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE LIGHT fills these requirements perfectly. *because it is correctly refined from selected California asphalt-base crude.*

"Zerolene is the Best"

—Say leading motor car distributors, because the records of their service departments show that ZEROLENE, correctly refined from selected California asphalt-base crude, gives perfect lubrication with less wear and less carbon deposit.

Most cars are now lubricated with ZEROLENE because their owners have learned through experience that there is no better oil.

ZEROLENE is the correct oil for all types of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations.

STANDARD OIL COMPANY

Government Buying Wild Castor Bean Seed

The Californla Castor Bean Association of Santa Barbara has been permitted by the aircraft board to turn in on their castor bean contract all wild castor beans that are properly cleaned and sacked and are In good sound condltion.

They are therefore offering to pay three cents a pound for all wild beans in the hull, properly dried and stripped from the spike, either in small lots or in carload lots, f. o. b. Los Angeles.

They will also pay six and a half cents per pound for properly cleaned and sacked wild castor beans f. o. b. any of the following points: Colusa, Los Angeles, Hanford, Turlock, Brawley, Fontana, Imperial, Lancaster, San Jose, Santa Barbara.

Parties shipping to either of these places should notify us at least four days before shipping the unhulled beans and at least one week before shipping the hulled beans. This time is required in order to make proper provision for receiving and paying for the beans.

As the government Is urgently in need of every pound of castor beans procurable, it is considered a patrlotic duty to lend every assistance possible in the collectlng and delivery of these beans. This would afford an excellent opportunity to children of the various school districts In Southern California to pay their Red Cross pledges and to buy War Savings Stamps.

Urge everybody to lend every assistance possible in this matter.—California Castor Bean Association.

War Absentees' Property Cared For

TWO large cooperative organizations are taking a patriotic step in looking after the property of the enlisted men who have gone or are going to the front. The California Walnut Growers' Association and the Citrus Exchange will advance such funds as are needed to care for orchards or other property of the absentees, put competent men in charge and maintain oversight of orchard care, harvesting and marketing of the fruit. In case of non-productive orchards all monies advanced to maintain the property are to be without interest charge to the owner.

The corporations' attorney, George E. Farrand, has drawn an agreement which protects the property owner and at the same time gives the associatlon or its agent control of the property so that best service can be rendered. The grower authorizes the association to enter upon his property and to cultivate, irrigate, prune, fumigate and otherwise care for it; to harvest the crops and to market them through the association, and to make all necessary or proper advances or expenditures, including the payment of taxes or other assessments which are, or appear to be, liens against the property and which in the judgment of the association are required or desirable to care for or to protect the property and to market the crops, the grower agreeing to pay the total amount to the association and creating in favor of the association a lien upon the property for payment of such expenses.

In Attorney Farrand's memorandum regarding the procedure he recommends that the grower deliver to the association a complete financlal statement of his affairs, including a statement as to his title to the property, delivering to the association any certificate of title or other documents which would furnish information desired upon questions which may arise during his absence. An itemized inventory of all personal property should likewise be compiled and approved by the grower and the association. If property is mortgaged or is being purchased under contract, the agreement should be modified to fit those conditions, particularly if the association may be required to make any payments. If a surplus arises from the operation of the grove, the association should be definitely advised by the grower as to what disposition should be made of it. All statements, Inventories and directions should be in writing.

Investigation of Vallejo Fruit Markets

The state commissioner of horticulture received recently a communlcation from citizens of Vallejo, appealing for help in bettering the quality of fruit sold in that city. It was stated that it was the prevailing custom for dealers to display high class fruit and when purchases were opened up at home the fruit was found to be of a decidedly inferior quality. This practice among the dealers, it was sald, had been going on for a number of years and the dissatisfaction finally led to the above mentioned appeal for assistance.

Field Deputy O. W. Newman, together with the horticultural commissioner of Solano County, G. M. Gates, made a thorough examination of the conditions in the markets of Vallejo, and according to the report they were found to be very bad and to justify the complaint of the citlzens. Some packed frult was found not to comply with the standards of the fresh fruit law and in a number of cases apples packed as "California Fancy" were Infested with dry rot and other diseases. Several boxes of packed fruit were seized as evidence of the violation of existing laws and all the fruit men of Vallejo were notified that if they did not clean up wlthin a given number of days inspectors would condemn their stock until It had been culled to comply with the law.

The cleaning up of city markets is a step in the right direction, as the citizens of California have just as much right to good fruit as the people of the East and there is no reason why all first quality fruit should be sent to New York and other Eastern markets and the culls left for home consumption. The fresh fruit standardlzation law has done much toward improving the quality of fruits on the home markets and it is the intention of this office to utilize all powers vested therein to keep up a persistent campaign until all markets of the state sell in strict compliance with existing laws and regulations.

QUARANTINE PLACED ON BAMBOO

To prevent the Introduction into the United States of dangerous plant dlseases, Including the bamboo smut, the secretary of agriculture has placed a quarantine on the importation of bamboo seed, plants, and cuttings. The quarantine becomes effectlve October 1. The order does not apply to bamboo timber, consisting of matured dried canes, which are imported for fishing rods, furniture making or other purposes, or to any kind of article manufactured from bamboo, or to bamboo shoots cooked or otherwise preserved. Importations of seeds, plants, and cuttings may be accepted for experimental and sclentific purposes by the department of agriculture. Shipments in bond for immediate export may be permitted in accordance with the regulations which have already been approved governing such entry.

STOP THE ROBBER

Continued from Page 277

Solution of the same strength mentioned should be used for the dipping and sprinkling methods. In dipping, after thorough cleaning and grading, the seed grain is placed in gunny sacks, which should be filled not more than half full and tled at the top. After dipping repeatedly In the solution, the sacks of grain are put where they will drain and dry enough, so the seed will run freely through the drill.

If not used within two hours, spread the seed out to dry and air.

Application may be made with an ordinary sprinkling can while the seed is being shoveled over from one pile to another. One gallon is sufficient to cover a bushel of grain when this method is used. The grain must be so well stirred that every kernel is thoroughly wet. It is then covered with sacks or other cloth wet with formaldehyde solution, and allowed to stand for a period before being spread out to dry or sacked for use.

There are three methods of treating seed with hot water. The short method consists of dipping the wheat or barley for from ten to fifteen minutes in water ranging from 126 to 135 degrees Fahrenheit and cooling and drying it immediately. To control loose smut the seed should first be soaked four to six hours in cold water before treating with the hot, or a lower temperature than recommended for the short method should be used and the soaking prolonged. If the latter method is used, keep the water at from 111 to 115 degrees Fahrenheit and soak the seed for three hours.

Disinfecting seed grain will prevent certain diseases other than smuts (but not rusts), and thus may increase the yield even more than would be indicated by simply replacing the smutted with sound grains. More complete information on cereal smuts and the disinfection of seed grain is contained in Farmers' Bulletin 939, a copy of which can be obtained, so long as the supply lasts, by applying to the United States Department of Agriculture, Washington, D. C.

THE PLOW-MAN TRACTOR HAS COME TO CALIFORNIA

One of the first of the new tractors to California to arrive for the Tractor Demonstration was the Plow-Man made by the Interstate Tractor Company of Waterloo, Iowa. This tractor has been manufactured and sold in the wheat belt for several years, but not sold in California heretofore. The sales were so extensive that the factory made no effort to cover the West. Recently Messrs. B. G. Doak and E. C. Doak of San Francisco, formerly of the Standard Corrugated Pipe Company of that city, took the California distribution of this tractor and are rapidly lining up agents among implement dealers, former auto dealers and others throughout the state. The Plow-Man made its usual favorable impression at the Salina, Kansas, National Tractor Demonstration though it was well known throughout the territory from whence the larger part of the spectators came and had been demonstrated several times previously.

The Doak Brothers have been doing business with California farmers for 18 years or more and enjoy a splendid reputation in the business affairs of California. They have built several successful businesses, including the Doak Sheet Steel Company, the Standard Corrugated Pipe Company, also the Pacific Coast Steel Company, which is one of the largest steel companies on the Pacific Coast. A parts department has been installed with a full line of Plow-Man parts, and any tractor bought of the Doak Tractor Company will go and be kept going.

Two sizes 13-30 and 15-30 are offered. Both are wheel type. The construction of the Plow-Man is standard throughout.

WHEAT

Continued from Page 275

of the state to interview the farmers, learn their successes and failures, study the conditions under which they are farming, and finally, where the situation warrants, recommend the planting of the new wheat, without, however, even suggesting that they "put all their eggs in one basket." It is realized that every farmer will want to prove out for himself the merits of a variety to which he has not been accustomed.

The points to be emphasized are these: Better seed, true to type, and adapted to the soil and other conditions; the importance of adequate drainage; the incorrectness of the popular theory that California grain lands are worn out.

Finally, when conditions justify planting wheat as well as barley, the more remunerative crop will be recommended. Today a ten-sack crop of wheat is worth a 20-sack crop of barley. The pendulum is swinging back from barley to wheat in California in view of the diminishing need of wheat substitutes, the substitution of motive power for horse-drawn vehicles, and the decrease in the demand for malting barley. The wheat farmer is assured a handsome profit for many years to come.

It looks as if California may, to a great extent at any rate, regain the high place it held in the '80s and '90s as a wheat producing state. With the cooperation of the other millers, the farm bureaus and kindred federal and state agencies, and especially the farm journals and newspapers of the state, the Sperry Flour Company, through its agricultural department, expects to be a potent factor in achieving results in this direction.

It is not enough to deplore what the Huns have done. That will not hurt the Huns; they don't care what you think of them. Help your government to fight them. That is the only thing that counts with a Hun. When you save and buy War Savings Stamps you attack a Hun in the place where it hurts.

Food wasted is food lost and no money can replace it.

Save Money by repairing Your buildings Now with Pioneer Roofing

Don't wait until leaks occur and cause a lot of damage. Have your roofs put in weather-proof condition at once.

Best results—long wear and less repair—will be obtained by using the old reliable PIONEER ROOFING which has stood the tests of 30 years. It's the one roofing that you can always count on to give satisfaction.

Pioneer Paper Co.

247-251 S. Los Angeles St. LOS ANGELES

TEN (OF MANY) CASE Betterments

1 Weighs only 3400 pounds, little more than a team of horses. Low and compact with short wheelbase. Turns in 22 ft. circle. Stays on all fours.

2 Rated 10 H. P. on drawbar, but develops nearly 14 H. P. Rated 18 H. P. on the belt but delivers about 24 H. P. This insures abundant reserve power.

3 Four cylinder Case valve-in-head motor. Removable head. Motor is set crosswise on frame, affording use of all straight spur gears. This conserves power.

4 Belt pulley mounted on the engine crank shaft. No gears used to drive it. Pulley is part of the tractor, not an extra-cost accessory.

5 All traction gears are cut steel, enclosed and running in oil. No bevel gears, chain, worm or friction drive parts.

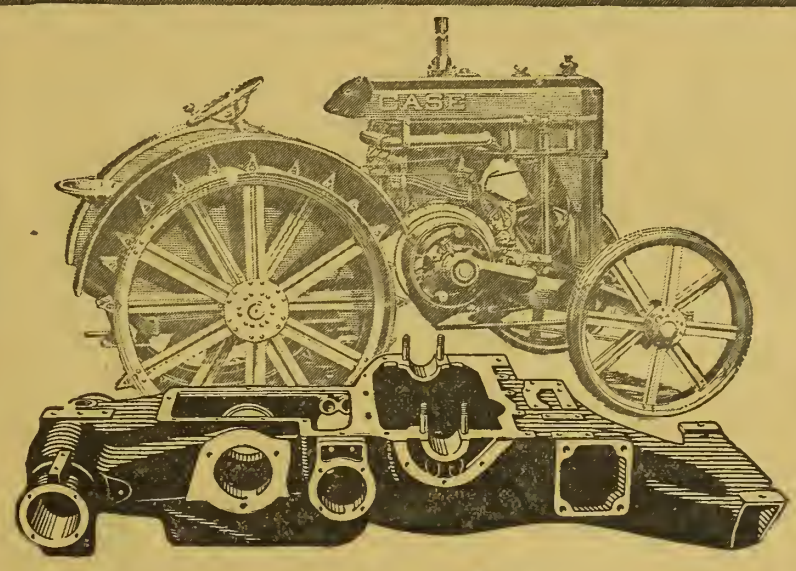
6 Case-Sylphon Thermostat controls cooling system and insures complete combustion of kerosene in the motor. Prevents raw fuel from passing by pistons and diluting oil in the crank case.

7 Case air washer delivers clean air to carburetor. No grit nor dust gets into cylinders to minimize their efficiency and shorten their life.

8 All interior motor parts lubricated by a combination pump and splash system. Speed governor, fan drive and magneto are dust proof and well oiled.

9 Complete accessibility. No dismantling necessary. Removable covers permit you to get at parts quickly.

10 Hyatt Roller Bearings in rear axle, bull pinion shaft and transmission case. Kingston ignition and carburetor. Five-piece radiator with a cast frame. Core is copper. Fin and tube non-clogging type.



This One-Piece Main Frame

Reduces Vibration—Prevents Disalignment

Here we picture a new tractor achievement — the frame of a Case 10-18. It is the fore-runner of new-day ideas in designing.

Note that this casting constitutes a dust-proof housing for the rear axle, bull pinion shaft, transmission shafts and the bearings for these parts. It also provides a base for the motor, which sets cross-wise.

This type of frame construction brings rigidity unattainable in a fabricated frame. It insures constant alignment of bearings, shafts and gears. Owners avoid gear troubles. Thus we prevent power losses.

And we multiply strength while reducing weight.

This one-piece frame is one of the greatest advancements in tractor history. It was inevitable. Others are bound to follow. But Case is in the lead. Case offers you now, today, what later on will be adopted generally.

This is only one of many betterments, some of which are itemized at the left. Do you know of any tractor offering all these superiorities?

A complete description of the Case 10-18, with illustrations and specifications, will be mailed upon request. Write for it today. Or visit a Case dealer.

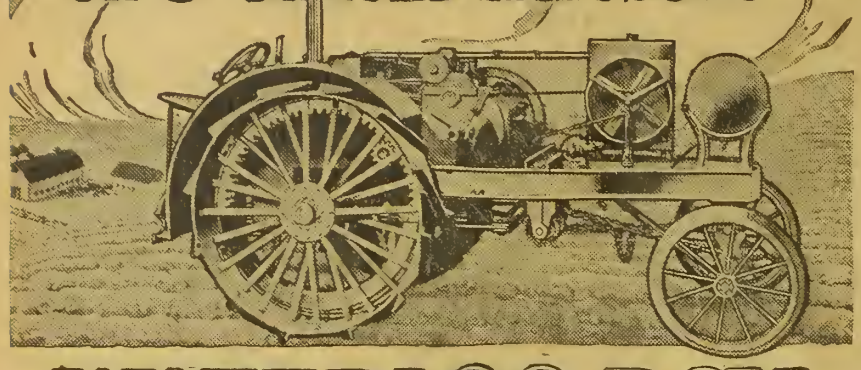
CASE KEROSENE TRACTORS

(781)

Plowing Record 8 Acres per Day on 8 Gallons Kerosene



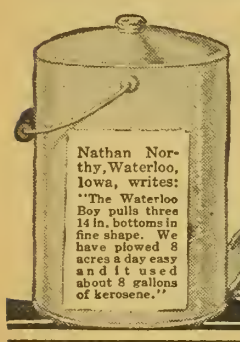
WATERLOO BOY

Original Kerosene Tractor

The Waterloo Boy plows more miles of furrow per dollar of fuel cost, because our patented, inbuilt kerosene manifold is different from every other. It refines kerosene into a powerful explosive gas—gets full power from every drop of fuel.

Excess Power for Emergencies

The Waterloo Boy has demonstrated its ability to do good work in all soil conditions—gumbo, hard pan, sod and flooded land—uphill and downhill. Guaranteed 25 H. P. at belt is ample for threshing, silo filling, etc.



Nathan Northy, Waterloo, Iowa, writes: "The Waterloo Boy pulls three 14 in. bottoms in fine shape. We have plowed 8 acres a day easy and it used about 8 gallons of kerosene."

Easy operation and long life are assured by simple, strong construction; perfect automatic lubrication, dust proof gears, bearings and wheels, reliable ignition, Hyatt Roller Bearings throughout, complete accessibility of working parts.

It will pay you to investigate this tractor.

Ornamental Planting Calendar for September in Northern California

Written for California Cultivator By A. R. Gould

TOWARDS the end of this month our floral display will be getting less brilliant, but the dahlias, cosmos and chrysanthemums will be doing duty, and a few hardy subjects in the perennial border will furnish us with color and lots of cut flowers. Many of our trees, shrubs and climbers will be taking on an autumn color. Nothing is more pleasing than the wonderful foliage of the Boston ivy, which by the way may be propagated this month by securing branches of ripe wood. If these are cut about 10 inches long and inserted in sandy soil they will soon throw out roots, in fact a few branches coming from the parent plant, growing close to the ground may be already trying to root themselves, and these may be cut off and placed in sandy soil to establish themselves; after which they may be planted out. This climber will cling to almost any wall, brick or concrete and even wood.

Flowering Shrubs

Many of these will need attention, and all dead flowers may be cut off. Especially does this refer to hydrangeas, but in pruning care should be taken to look for the new shoots and cut back to these. The oleander will also need the same treatment, and as this shrub is also frequently attacked with a black scale insect it should be sprayed with a mixture of whale oil soap and nicotine. All dead flowers should be picked off the rhododendrons. Genista scoparia, commonly known as the Scotch broom, will now be bearing seeds which should be collected and sown at once. The same will also apply to the Spanish broom.

Chrysanthemums

Continue to feed these with liquid manure and where large blooms are desired the terminal bud must be left only and others removed on each stem. A gentle overhead spray morning and evening will also help these considerably.

Gladiolus

Many seeds of these should now be ripe and may be collected and sown in a box of sandy soil placed in a fairly warm situation. Avoid sowing the seeds too thickly as they may then be left to grow on in the boxes for some months before there will be any need to plant them out. It is most interesting to watch the development of these from the seedling stage.

Perennials

Michaelmas daisies, or hardy asters, will be flowering this month, and seeds of other perennials such as hollyhocks, aquilegia, erigeron, anchusa and the oriental poppy, should be collected and sown if new stock is required for future plantings. Seeds of many other subjects in this section such as delphinium, arabis, aubretia and alyssum, should also be sown. The last three named are excellent subjects for rock planting, edging or carpeting for flower beds. They are early flowering and very hardy.

Freesias

Bulbs of this very fragrant flower may be planted this month. Purity and Barris primrose are two very excellent varieties. A few may be grown in pots, plunged in ashes or sand for the first few weeks after potting to encourage root action. When buying the bulbs see that you get the large bowering size. A little well rotted manure mixed in the soil will give pleasing results.

Pansies and Violas

Secure the large flowering pansies and sow the seeds. The viola also may be had in the following varieties: V. lutea, V. white, Blue Perfection and Purple Queen. It is in flower much longer than the pansy and looks well planted in solid colors.

Cyclamen

Bulbs of this popular flower which should have been dormant or resting the last few months should now be started into growth if they are needed for the Christmas season. Pot these up into five or six inch pots in rich soil and water moderately at first. Place them in a fairly warm situation but shade from the direct rays of the sun.

Winter Flowering Stocks

Plants of these should be secured and planted out this month. Nice purple is an excellent color and also Crimson King. Mont Blanc is the best pure white.

Art in the Garden

Written for California Cultivator By Ernest Braunton

TO GET art in the garden we must use restraint. When we overdo in plan or planting art quietly escapes, unnoticed, through a hole in the fence or hedge. For art is never obtrusive, nor forces its tenets upon anyone. It is so modest it has to be very gently wooed in order to be won. Simplicity is the true foundation upon which art is built or wrought and those who seek it must refrain from excesses quite common in modern gardening.

The famous William Morris, in his "Hopes and Fears for Art" says: "Another thing also much too commonly seen, is aberration of the human mind, which otherwise I should have been ashamed to warn you of. It is technically called carpet-bedding. Need I explain it further? I had rather not, for when I think of it, even when I am quite alone, I flush with shame at the thought." So far from the garden being ugly, it should be beautiful. As against bareness it should overflow with plant life. Instead of being cut up or spotted with carpet-beds there should be quiet stretches of green lawn, with flowers in the border. In contrast to conventionality there should be ease and simplicity of lines, gently flowing curves, and a general air of rusticity.

Art, especially in the garden, is based upon a love for nature and a deep study and close observation of her teachings. Fidelity to nature is the standard by which art is judged, whether it be garden design, landscape painting or the statue of the sculptor. In the broad field of art human products are judged by this same standard. How stand ye in the garden? Have you wrought aright? Or have you frittered away your grounds in a way that neither compensates nor satisfies? When you enter your garden you should feel contented, not irritated, reproached or reproved. You should feel comforted and at rest. The garden itself should have an air of repose, a quiet restful scene that awakens no feelings except those of admiration, sufficiency, and comfort. It should speak of ease, be pleasant to the eye, fragrant to the nostrils, soothing to the nerves, and beloved of all visitors. If you have so wrought you have indeed builded the "garden beautiful."

Overwhelmed Gardens

Some time ago I was called to design a rural garden where the owner confessed to having subscribed to the California Cultivator for many years, but had not of late years read it. I am confident that a close perusal of our garden "lore" would have prevented making a great mistake. The grounds at disposal for the ornamental garden were limited as to size, with a fair frontage along a finished street but with a very restricted depth. This situation would at once suggest approach to the house from the highway only, for why use the limited space for a driveway and necessary loop when the public had provided an excellent paved street still closer to the front door than it was possible to

get, with a conveyance, from the grounds.

But I was not asked to design the garden as I thought best, or even to suggest the proper plan or layout. I was asked to plan a driveway and loop between house and orchard on the sides and between orchard and garage on the rear and the splendid and sufficient street on the front. The owner had spent months in a vain endeavor to study out how it could be done without using all the space for traffic. But the magic of the landscape designer was presumed to render all boundaries elastic and thereby provide, in addition to the drive, space for all the fine trees, shrubs and beds of flowers, the possession of which had been a dream of years. But the area would not stretch, the drive was planned. The lines were not quite so easy of negotiation by a big automobile as they should have been, and very little space was left for trees and flowers. This is what I call an overwhelmed garden. The drive was the dominating feature. In fact, it was the only feature. Do we need to ask what should have dominated? A close reading of our leading article will disclose what should have been, and was really what the owner desired, for the driveway was not built. Do not overwhelm your garden with things that are not of the garden; and driveways are not. Have only such drives and paths as are necessary; let the remainder be just garden.

Berried Plants

Quite recently I visited a garden where months before I had admired great masses of shrubbery covered with nearly equally solid masses of red and orange berries. They were still there; hundreds of pounds of them, still beautiful and the strongest attraction of the garden. We should plant more liberally of cotoneasters, crateagus and pyracantha. All bear heavy crops of berries that remain on the bushes for months and all are shrubs of beauty without either flowers or fruits. It is only of recent years that we have begun to grow and show deep appreciation of berried plants, but in England they have been favored plants for centuries, or ever since their introduction to commerce by the discoverer.

Autumn Lawn Work

Just as soon as the hottest weather is past is a good time to make new lawns or patch up old ones. During hot weather it is nearly impossible to keep the top soil damp enough to protect the grass seed, even though watered a half dozen times a day. If the seeds dry after sprouting the crop is lost. With cooler weather this difficulty has passed away and blue grass seed grows just as readily in cool weather as in mid-summer. It is better not to wait too long to sow lawns or in cold sections early frosts may come and catch the grass in the milk stage and destroy so much of it as to leave insufficient for a good lawn. Do not fertilize lawns in autumn as rains wash away all plant food and leave but a dead mulch behind, though of some value.

SEPTEMBER GARDEN PLANTING CALENDAR FOR ARIZONA

Vegetable Seeds

Beans, beets, cabbage, cauliflower, cucumber, kohlrabi, kale, lettuce, onion sets, peas, radishes, spinach, turnips and Lawn grass.

Flower Seeds

Ageratum, mignonette, freesia bulbs, cosmos, phlox, nasturtiums, pansies, sweet alyssum, hollyhocks, zinnias and Christmas flowering sweet peas.

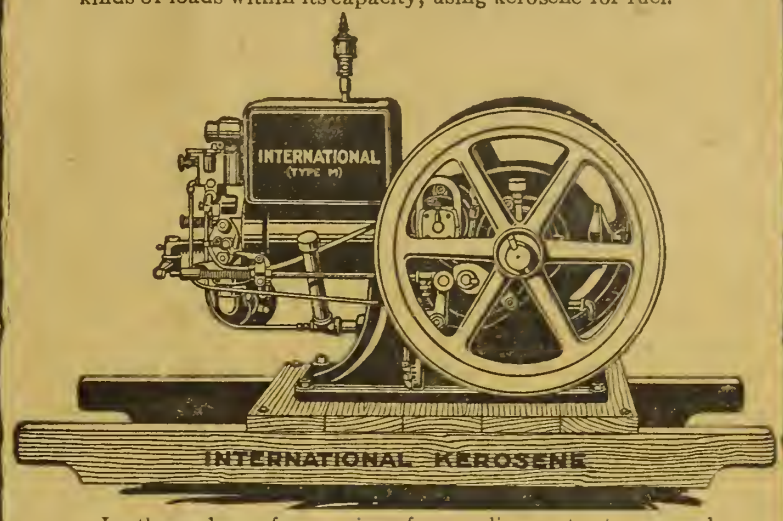
We harvest grain sorghums, broom corn, cowpeas, peanuts, cotton, melons, grapes, plums, peaches, apples, pears, dates and pomegranates.

HOW TO DETERMINE THE APPROXIMATE DRAW BAR PULL

To find the aproximate draw bar pull of a tractor traveling two miles per hour, multiply the rated draw bar power by 180 pounds. For instance, a tractor rated at eight horse power at the draw bar (at a two mile speed) must have a pull of at least 1440 pounds to make good on its rating. This should be a conservative estimate of its pull.

Internationals All Kerosene Engines

EVERY engine in the International line, from the smallest to the largest, operates on common coal oil. Every International engine will develop its full rated horse power, at all times and under all kinds of loads within its capacity, using kerosene for fuel.



In these days of war prices for gasoline, extra taxes, and none too plentiful supply, there is both safety and economy, to say nothing of patriotism, in using kerosene engines.

Add to this the economy that results from using an engine that conserves fuel, that is always ready for work and that lasts so long you forget what you paid for it, and you have some of the reasons why International engines sell so fast.

We have all sizes, from 1 to 15-H. P., with a special line, the **International Type M**, in 1½, 3, and 6-H. P. sizes. Here is a line of real farm engines that no farmer can afford to overlook when he is in the market for an engine. See your local dealer or write to us for complete details.

80 REGISTERED HOLSTEINS 80

There is something in this sale to suit almost any buyer of good holsteins.

High Record Show Cows. High Record Show Bulls. Show Cows Without Records. Young Bulls of Quality. Including:

POTOKI JOHANNA 2ND, a 27.86 pound show cow of beautiful type.
DORA HENGERVELD OF SYLVAN IRIS, a 23.06 pound four year old of great future promise.
A DAUGHTER OF PRINCE GELSCHE WALKER, with a record of 577.2 pounds butter in one year at two years two months.
A 20 POUND FOUR YEAR OLD bred to Aaggie Cornucopia Pauline Count 40th.
A 20 POUND COW that made 15,220.8 pounds milk and 644.09 pounds butter in 320 days, bred to Prince Alcartra Korndyke, son of Tilly Alcartra.
A DAUGHTER OF THE SHOW HEIFER RIVERVIEW BRACELET BRETT, and she will be fresh at time of sale.
THREE DAUGHTERS OF A 30 POUND SIRE.
TWELVE DAUGHTERS OF HERMANA IGNARO who is by a son of Ignaro De Kol, the only sire with nine daughters above 20,000 pounds milk in one year, his entire list of yearly tested daughters, 14 in number, averaging 20,543.4 pounds milk.
TWELVE COWS AND HEIFERS bred to 30 pound sires .
THREE COWS AND HEIFERS bred to a 40 pound sire.
COWS AND HEIFERS of splendid breeding bred to King Segis Alcartra Prilly, Grand Champion at California State Fair, 1917-1918.
And many other females of equally attractive breeding and type.

BULLS

HUBBAVALE ARTIS TWISK NETHERLAND. This grand young bull will not be two years old until December, and is sold only because Mr. Outland is dispersing his entire herd in this sale. He is sired by a son of Artis Pontiac Winana out of Statia De Kol, a 31.32 pound daughter of Lord Netherland De Kol. His dam is a 30.27 pound daughter of Aaggie Cornucopia 3d's Count, giving him an average for his dam and sire's dam of 574.9 pounds milk and 30.79 pounds butter in seven days.
SIR CHIMACUM WAYNE WOODCREST. Just past two years of age, and an individual that would not be out of place in any show ring. He is sired by a son of the former world's record cow Margie Newman out of Chimacum Wayne Boon, the highest yearly record daughter of Sir Veeman Hengerveld. His dam is Chimacum Maud who made 624.8 pounds milk and 29.80 pounds butter in seven days last winter as a junior three year old and is one of the best candidates in the Bridgford herd for a large record. She in turn is out of a daughter of Homestead Girl De Kol Sarcastic Lad with a record of 24,497.4 pounds milk and 960.80 pounds butter in one year. The three nearest dams of this splendid young herd sire average 643.3 pounds milk and 29.98 pounds butter in seven days, while the sire's dam and dam's dam average 23,896.9 pounds milk and 1047.44 pounds butter in one year.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Probate of Will

A parent dies in the East leaving three heirs, two of whom reside in the East and one here. The will was promptly read in the absence of the California heir, it having been the request of the parent that a certain third party be present and act in his place. The husband of one of the Eastern heirs and the other Eastern heir were appointed administrators, the first of whom is now dead. Was this a legal procedure? Should the California heir have been legally notified of the reading of the will?—Subscriber R. B.

The matter of probate procedure is purely statutory, and the statutes of the different states differ widely in this respect. It is frequently the case that there is no necessity for actual notice of application for probate of will or administration upon an estate to those of the heirs residing outside of the state. The mere opening or reading of the will is not within the contemplation of the law. Upon filing the application for probate of the will the will is filed with the proper officer of the court and remains there; anyone can procure a copy as it becomes a public record.

"Keeping Up" Chickens

A owns a grove adjoining B and has planted a cover crop therein and requested B to keep his chickens closed up. B has supplied five families with eggs in the year round with his hens, but since closing them up has had but two eggs a day and if kept closed will have to dispose of his chickens. Does B have to keep his chickens closed?—Subscriber.

B does not have to keep his chickens closed up, but he does have to keep his chickens off from the property of A, and if he cannot do that in any other manner he had better dispose of them unless he could arrange to pay A out of his profits for the damage caused to A's crops, if any.

Real Estate License

Is it necessary for a real estate agent, loaning money on commission, to have a federal license? I understand this license costs $100 and without license one so acting is subject to fine of $2000 and two years imprisonment. Also the same situation in respect to the insurance business, and that if a man handled both he would have to have a license for each. Is this correct? — Subscriber, Long Beach.

There is no federal law requiring such license or licenses. There is or was a state law requiring any person who for compensation offers to negotiate for the sale, purchase, or exchange of real estate, or loans thereon, or to collect rents as a whole or partial vocation to apply to the real estate commissioner of this state for a license to do said business which application must be in writing and accompanied by the recommendation of two real estate owners in the county certifying to the good moral character of the applicant; he must file a bond to the state of California conditioned for the faithful performance of his duties, in the sum of $1000; his annual license fee is $10. The act does not affect insurance brokers. Upon conviction of violation of the provisions of the act a person may be punished by fine of not to exceed $2000, or by imprisonment in the county jail or state prison not to exceed two years, or both, and be held liable upon the bond above mentioned for any damage caused to those with whom he deals. Portions of this act have been held unconstitutional by the supreme court recently.

Justice Court

In suing upon a note or account before a justice of the peace is it necessary to employ an attorney? Please tell me just what to do.—Subscriber, Pasadena.

It is not necessary to employ an attorney to bring suit in any court in this state and any one may carry on any such suit to final conclusion even up to the supreme court without an attorney, according to the letter of the law. A suit in a justice's court is commenced by filing the complaint, which is not required to be in any particular form but must be such as to enable a person of common understanding to know what is intended; it must be in writing and state the facts constituting the plaintiff's cause of action or a copy of the note, bill, bond, or instrument upon which the action is based. A summons is thereupon issued by the justice which must be personally served upon the defendant; if the defendant answers then the case must be set down for trial and the evidence produced.

Tenant Fails to Pay

Kindly state what course to pursue to get rid of a tenant who fails to pay his rent—Subscriber, Pasadena.

The landlord may serve notice requiring payment of rent within three days or possession of the property; the notice should state the exact amount due, the term for which it is due, the agreement under which it is due, and the property upon which it is due should be described. The notice should be dated and signed by the owner. If at the expiration of the three day period the tenant has failed to comply with the terms of the notice the landlord may bring suit for unlawful detainer of the premises and may obtain judgment for the possession of the premises together with treble the amount of the rents. If the rental of the property is under $25 per month the suit may be brought in either the justice court or the superior court; if over that sum then in the superior court.

Selling Milk

Are there any legal restrictions preventing a farmer from selling his surplus milk or butter to a neighbor, or from selling his butter to a store? What can be done to remedy any objections which may exist?—Subscriber, Sanger.

An act to prevent the sale of impure milk and milk products was passed in 1917. This act makes it unlawful for any person to sell the products from any cow which has not passed the tuberculin test, until it has been pasteurized, excepting sales to the wholesale trade. It is also made unlawful for anyone to sell milk in any locality where there is a milk inspection service without obtaining the approval of said service and the grading of the milk by said service in accordance with the provisions of the statute. You should ascertain the fact as to the establishment of a milk in-

spection service in your county or locality; if there is none such then you should file a written request with the state veterinarian that your cows be given the tuberculin test; upon filing that request you may sell until such time as the test is made and then in accordance with the test.

Selling Meat

Is there a state law requiring persons selling meat at retail to give bonds? If so, does it include country districts? Would it prevent one farmer from selling his surplus meat at butchering time to another? Does it do away with selling meat at free public markets?—Subscriber, Artois.

In 1917 there was passed an act establishing a cattle protection board; among the provisions of this act there is one requiring everyone slaughtering cattle as a business to first procure a license so to do from the protection board and to execute a bond in the sum of $1000 conditioned that he will not slaughter cattle or sell cattle or the meat thereof unless he is the owner thereof or authorized by the owner to slaughter and sell; he is required to make report monthly to the board of his purchases and the brands thereon. No retail butcher may purchase from any unlicensed slaughterhouse and every retailer must keep a record of his purchases. A rancher definitely located may, however, slaughter in small numbers upon his own premises for his own consumption and he may sell or give away a portion of the meat. For this he does not need to give bond or take out a license, but he must keep the hides of all cattle slaughtered or removed from cattle which have died from any cause, in his possession where they may be inspected with brands attached and without alteration or disfiguration for at least 15 days after the death of the cattle or until they are inspected. He must also keep a record in a book to be kept for that purpose, of all cattle so slaughtered, with a description, including marks and brands, and the date of slaughter and at the end of each month he must make a true and correct copy of said record and send it by registered mail to the office of the Cattle Protection Board in Sacramento; he must also exhibit his book record on demand to any officer of the state. Any violation of the provisions of the act is a misdemeanor. It would seem that there is no provision in the act in reference to public markets, but a rancher complying with the above terms applicable to his case should have no difficulty in that respect.

Fallen Fruit for Cattle

I want to turn some small yearlings into a pasture which has late pear and apple trees with some fruit on: Will there be any ill effect from the cattle eating the green fruit? If it does affect them and I should find one sick what would be the best treatment for it? A neighbor recently lost a horse from overfeeding green pears. Could he have been saved and how?—Subscriber, Julian.

Fallen fruit will not hurt stock unless they eat too much of it or one gets lodged in the throat or between there and the stomach and chokes the animal. An apple lodged in the throat may sometimes be gotten up, but usually you have to push it down into the stomach, but not with a straight stick or hoe handle. Use a buggy whip or still better a probang, which is a flexible instrument made for that purpose. Put a block of wood that has a hole in it into the mouth and pass the probang through it. The probang should be six feet long to reach the stomach of a full sized animal. If they eat too many apples it will cause indigestion and then they usually bloat. The best remedy for that is raw linseed oil and turpentine, two ounces of the turpentine to each pint of the oil. The size of the dose to be governed by the size of the animal, a pint for a calf and a quart for a grown animal. A larger dose will not do any harm. They are also sure to bloat when choked but that will go away when the apple is removed.

Foxtail in Stomach

I had a cow that was sick for some time. She got so very poor that at last I had her killed. When we opened her we found her lungs in perfect condition but there were three balls of foxtail about the size of one's fist in her stomach. They were quite hard. My hay that was cut last spring was mixed with some foxtail. I have another cow that I think is going the same way. What can be done for her?—Subscriber, Newman.

Ripe foxtail is awful stuff for an animal to have to eat, but it will get into the hay. Give a physic of one quart of raw linseed oil and three ounces of turpentine or give one pound of epsom salts, half a pound of common salt and two drams of powdered nux vomica. Dissolve all in two quarts of hot water and when cool give at one dose as a drench. It would be better to give both doses; giving the oil first and the salts a few days later.

Sick Pigs

I have some pigs nine weeks old that have a cough and their eyes are inflamed and mattery. Two have died and two more are quite sick. They were troubled with lice and I dipped them in a solution of kreso dip (75 to 1) which seemed to be too strong for them for their hides became hard and cracked. Have fed them on a diet of bran, potatoes, sugar beets and a small amount of sauerkraut. All food but the bran has been thoroughly cooked. They eat very little, seem fat but do not grow at all. What can I do for them?—Subscriber, Marina.

Lice on pigs can be gotten rid of by making a weak solution of any of the sheep dips, as 1 to 200, and sprinkling it on them from a sprinkling can. Their sleeping place should also be well sprinkled with the solution. This should be repeated every day until the lice are all gone. By dipping them the solution is likely to get into the eyes and do harm. If they are allowed to dry off in the sun after dipping them it is likely to parch the skin. The eye trouble may be from the kreso solution getting into them

CARRY TO THE LIMIT!

Good dairy cattle are going to be in demand at unprecedented prices in the near future, just as sure as today's sunset!

Yet conditions are such that here and there a breeder feels compelled to sell his herd now, even though he realizes the certainty of the greater demand and higher prices that are sure to come, and probably to come soon.

Fortune rests within the hand of the man who has in his possession a herd of high class dairy cattle not many months hence, and it behooves every dairy cattle owner to carry good cattle to the very uttermost capacity of his feed and labor this winter. Keep what you have and buy from the other fellow who sells now.

W. H. Ginn & Son have decided to dissolve the existing partnership and will sell their herd without reserve or limit at public auction. As most breeders know, Ginn & Son spared no expense in buying good foundation animals, and from them they have developed a choice herd now numbering over 90 head. Every one of these will be sold to the highest bidder, on their farm, one and one-half miles southwest of

Corcoran, California
Thursday, October 10, 1918

The cows in milk will speak for themselves on sale day, many of them fresh or heavy springers, making money now and capable of keeping up the pace. And besides being great producers they are regular breeders as the calves and young stock prove conclusively.

The heifer herd is especially attractive, including:

TWENTY-FOUR DAUGHTERS OF MERCY SIR PONDYKE, whose sire is one of the best sons of King of the Pontiacs, and whose dam is a 23 pound cow of sound breeding.

TWENTY FIVE DAUGHTERS OF ARALIA DE KOL PONTIAC SALAMBO, by a son of the former world's record cow Aralia De Kol, and out of one of the best daughters of King Mead of Riverside that has just finished a yearly record of 22,097.8 pounds milk and 950 pounds butter in one year.

ARALIA DE KOL PONTIAC SALAMBO will himself be sold, and besides his 25 daughters in the sale there are 34 cows and heifers in calf to him. His three nearest dams average 610.3 pounds milk and 30.26 pounds butter in seven days, 24,158.26 pounds milk and 1031.86 pounds butter in one year.

Every animal guaranteed to be a breeder, every animal tuberculin tested and sold subject to tuberculin retest, except a few of the older animals that will be sold exactly as represented at sale.

Catalog in preparation. Write for one.

and

King Korndyke Pontiac

(shown below)

renewed old acquaintances and made a host of new friends among those who visited them at their home during State Fair week.

Some good judges, who saw them and their sons and daughters for the first time, even went so far as to suggest that we have been entirely too modest in the claims we have made for them.

Our official test season will begin very soon, and we shall have something to report about the splendid young daughters of both of our herd sires. The fact that KING KORNDYKE PONTIAC is sired by King of the Pontiacs, the greatest sire of all time, and PRINCE GELSCHE WALKER KORNDYKE is by Prince Gelsche Walker, the greatest bull yet developed in California, gives us reason to expect really big things of their daughters.

Why not put a young son of one of these bulls at the head of your herd now? We have a few good ones on hand, and it will be dollars and cents in your pocket if you buy one now before our official testing starts this fall. We price these good young bulls moderately, and don't overlook the fact that we extend liberal terms if you wish.

Individuality Breeding

We Have Been Telling You

that PRINCE RIVERSIDE WALKER is siring a mighty fine lot of calves in our herd, and prospective buyers who have come to look at his young sons have agreed with us for we have sold right down to calves all the time.

Now we have some expert opinion on the young sons and daughters of "Prince," in the form of awards at the recent California State Fair in the hot competition of the younger classes. Sons and daughters of PRINCE RIVERSIDE WALKER were placed as follows by Judge Scribner:

First Junior Bull Calf.
Fifth Junior Bull Calf.
Reserve Junior Champion Bull.
Second Senior Heifer Calf.
Fifth Senior Heifer Calf.
Reserve Junior Champion Heifer.
First Prize Breeders Young Herd contained some of his daughters.
Second Prize Calf Herd.
First Prize Produce of Dam, won by his twin sons.

Hadn't you better consider one of his young sons to head your herd, securing a rare combination of breeding and type?

Our Entire Herd is Tuberculin Tested

P. S.—Our junior herd sire, King Korndyke Pontiac 20th, was a second in class at the State Fair to the bull that was again made grand chamipon.

Awards at the State Fair

Written for California Cultivator By C. L. Hughes

THE showing of registered Holsteins at this year's state fair proved to be unexpectedly good, in view of existing conditions which operate against the fitting of a show herd.

The outstanding feature of the show was the exhibit of Bridgford Company, Knightsen, largely due to the presence of their grand champion bull, King Segis Alcartra Prilly, and his get. Last year this bull was pronounced one of the greatest young bulls ever uncovered in a Western show ring, and the only further comment on him this year is that he has developed above his 1917 form, carrying a wonderful depth of body, fine handling qualities, and a vast amount of style. The way he is breeding on is more important than his own individuality, and in stiff classes his daughters won first and fourth in the senior heifer calf classes, and first and second in the junior heifer calf classes, the winner in this class, Miss Orpha Pontiac Prilly, winning the junior championship from a field of good ones. One of his sons won fourth in the senior bull calf class, and another second in the junior bull calf class. His get won first place in the calf herd class and first as get of sire, rounding out a show that brought great honors to this excellent young sire.

W. J. Higdon, Tulare, made his first appearance at California state fair with a herd of which any breeder might justly feel proud. The star attraction of his exhibit was of course the great King Korndyke Pontiac 20th, the $6500 son of Miss Valley Mead De Kol Walker and King Korndyke Pontiac. This bull has made a remarkable development since last December, and as he stands today he is not out of place in any show ring. He stood second only to the Bridgford bull that was later made grand champion, and made a splendid impression upon the ringside judges. The Higdon entries were dangerous contenders in every class in which they showed, Harry Redd having them up to the mark every minute. In the senior bull calf class both first and second places were won by Higdon entries, as were also the first and fourth places in the junior bull calf class, the first place calf in this class later being made reserve junior champion. Higdon's entries also won second on aged herd, first on breeders' young herd, second on calf herd, second on get of sire, and first on produce of dam. The produce of dam, get of sire, second and fifth senior heifer calf, first and fifth junior bull calf, reserve junior champion bull, and reserve junior champion heifer, were all sired by Higdon's senior herd sire Prince Riverside Walker, making a splendid showing for their sire. Higdon lost several hair line decisions, and his herd was a center of attraction during the entire nine days of the fair, rounding out the session by winning both first and second places in the butter fat contest in the mature cow class.

The J. B. Gibson Company, Williams, were contenders in all of the classes in which they entered, pulling down a good share of ribbons.

J. H. Harlan Company, Woodland, showed an attractive herd, including a number of daughters of King Mead of Riverside that were greatly admired by all who saw them.

R. L. Holmes, Modesto, made an excellent showing with a small number of animals. Holmes has made unusually good selections for his foundation stock and will be heard from not only in the show ring but in the official test lists as well.

H. E. Vogel, Fresno, sent up a choice herd that was severely handicapped by the hardships of the trip. These cattle were held in the railroad yards over 24 hours at Sacramento, on a hot day just preceding the opening of the fair and when unloaded showed plainly the effect of the circumstance. In spite of this great drawback however, they provided stiff competition on judging day.

Longheath Farm, Mason, Nevada, owned by H. J. Long, made its first showing at California state fair and created a decidedly favorable impression. This herd is under the management of George Wendt, well known in California, and he can always be depended upon to bring them before the judge in fit condition. Considering the fact that this herd has been established practically within the past two years the showing made was very successful. Of particular interest in the Longheath exhibit was their young herd sire, King Ormsby Canary Johanna, who is by the great Sir Pietertje Ormsby Mercedes and out of a three year old that made 34.40 pounds butter in seven days and 139.83 pounds in 30 days. He is full brother to Glen Canary De Kol, 951.05 pounds butter in 365 days, freshening at 24 months.

The man who made a 100 per cent killing in the show was J. D. Patterson, Patterson, who brought up just one animal, the bull King Segis Alcartra De Kol Pledge, who won first in the senior yearling class, junior championship, and reserve grand championship. This bull is a remarkably good individual, and appears to have the outcome that will make him a dangerous competitor in any company.

The Individual Classes

The class of aged bulls was limited to two entries, the Longheath bull Copa De Ora Katrina Nevada going to the top with Harlan's bull, Prince Butter Boy Walker in second place.

The class of two year old bulls brought out four entries, and first place went easily to King Segis Alcartra Prilly, who was later on made senior and grand champion. Second place went to Higdon's King Korndyke Pontiac 20th who was a very strong second in this class. Harlan took third position with Prince Gelsche Walker Paul, and Vogel fourth place with Crown Prince Segis 25th, a well proportioned bull that might have gone higher had he not showed evidences of the hard journey to the fair. The junior yearling bull class uncovered only two entries, Gibson's taking first place and the entry of Longheath Farm second.

The senior bull calf class provided the first real work for Judge Scribner, and first honors went to Higdon's entry Model Bonnie Fobes De Kol an outstanding youngster of great size and quality, with his half brother De Kol Spofford Pontiac, also owned by Higdon in second place. Third and fourth places went to Bridgford entries, while Holmes wound up in fifth place with a calf of pleasing type and as good handling quality as anything in the class.

In the junior bull calf class Higdon showed a pair of twins sired by Prince Riverside Walker, taking first and fifth places, the first prize calf afterward winning the reserve junior championship. Bridgford took second place with a Prilly calf, while Holmes took third place with a son of the senior Bridgford herd sire, and Harlan took fourth place with a son of Yolo Valdessa Hengerveld.

The aged cow class was hardly up to the standard of former years either in numbers or quality. The two top cows, one entered by Bridgford the other by Higdon, were neither one in good show form. The Bridgford cow had calved just before shipping and showed up with a considerably caked udder, while Higdon's cow dropped twin bulls the day before judging and showed up rather gaunt. The decision in this class was of the hair line variety, finally settling on the Bridgford cow mainly because of her superior size. The third prize cow, the Longheath entry, was the youngest cow in the class and in another year should be a hard cow to beat. She showed up especially well after the milking out ordered by the judge.

The three year old class brought out four good entries. The Bridgford heifer however was an outstanding winner. This heifer, Tora Pontiac of Vina, is still milking in her second year old form, having to her credit an official record above 25 pounds butter in seven days at the beginning of her lactation period. The Longheath heifer won second place on her superior capacity and her appearance after the class was milked out. Holmes' heifer claimed third place, and the Harlan entry fourth.

In the two year old class the Longheath entry took first place by a shade over Higdon's entry, while

B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K B-K

Vogel's entries took third and fifth places and Harlan's entry fourth.

Two entries made up the senior yearling heifer class of which Holmes' Rosa Burke won over the Gibson entry.

Bridgford and Higdon took all the money in the senior heifer calf class their entries winning the five places out of a strong class of ten. One of Bridgford's Prilly heifers took top honors by a scant margin from a daughter of Prince Riverside Walker in Higdon's herd. This second place heifer was so good that the judge later on made her reserve junior champion.

The junior heifer calf class brought out a beautiful bunch of babies, daughters of King Segis Alcartra Prilly taking three of the five moneys for Bridgford, the first prize heifer later on taking the junior championship. Holmes landed a good third with a daughter of Sir Aaggie De Kol Acme, while Longheath took fourth place.

In the group classes Bridgford and Higdon were the big winners, although Longheath Farm took down the blue in the aged herd with Higdon second. Higdon's entry won first in the breeders' young herd, Bridgford first and Higdon second on calf herd, Bridgford first and Higdon second on get of sire, Higdon first and Harlan second on produce of dam.

In the production classes Higdon made a clean sweep of the classes in which he had entries, winning first on cow with yearly record, and first and second against all breeds in the mature class of the three day butter fat contest.

Exhibitors: Bridgford Co., Knightsen; J. S. Gibson Co., Williams; J. H. Harlan Co., Woodland; W. J. Higdon, Tulare; R. L. Holmes, Modesto; Longheath Farm, Fallon, Nevada; J. D. Patterson, Patterson; H. E. Vogel, Fresno.

Awards

Bulls, three years old or over—, 1, Copa De Ora Katrina Nev., Longheath Farm; 2, Prince Butter Boy Walker, Harlan.

Elliott-Brant Rancho Guernseys

We have an especially fine bunch of young Guernsey bull calves to choose a future herd sire from. Guernsey bulls cross well with all breeds of cattle and they increase the quality and color of the milk as well as the quantity of milk and butter fat. The Guernsey bull has won the battle with the scrub cow.

We have calves from A. R. cows with different sized records up to 750 pounds of butter fat. Our prices are reasonable and are based on breeding and records. Write and tell us your needs and we will tell you how we can fill them.

Elliott-Brant Rancho - Owensmouth, Cal.

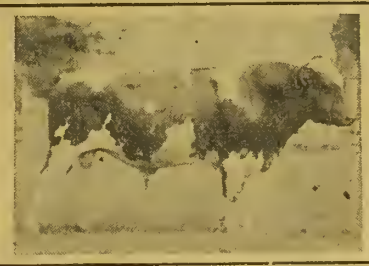
Santa Anita Rancho
Anoakia Breeding Farm
REGISTERED HOLSTEINS

A herd of fine individuals, strongly bred in the lines of great production as evidenced by both short and long time records, handled in a manner to produce sound, healthy breeding stock.

Prince Walker Cornucopia

Our junior herd sire, is sired by PRINCE GELSCHE WALKER, and out of a 34.14 pound granddaughter of the first 30 pound cow, Sadie Vale Concordia. He is the highest record son of Prince Gelsche Walker in service. We have for sale a few choice young bulls.

SANTA ANITA RANCHO *Santa Anita, Cal.*
Anita M. Baldwin, Owner - *W. H. Taylor Supt.*



Prince Hiske Walker

He is by Prince Gelsche Walker and out of Hiske of Riverside, being therefore full brother to Lady Hiske Walker, 34.25 pounds butter in seven days as a junior four year old, former state record in class.

His offspring are uniformly straight, vigorous, and well marked. A few of his young sons for sale.

Beware of substitutes!
Buy the original Germain's
Hairy Peruvian
ALFALFA
direct from the introducers!

For your *own protection* order *ONLY* Germain's specially-selected, proven, tested, pedigreed, true-to-type Hairy Peruvian seed. Our supply is limited and we may be over-sold in double quick time. To avoid disappointments place your order at once. Wire, telephone or write for a reservation of seed, stating amount wanted—or call personally if you can. Orders will be filled in the order in which they are received.

Regardless of whether you intend to plant this fall or next spring, we advise you to buy your seed now. Increasing demand means increased prices. Hairy Peruvian is rapidly displacing all other alfalfa varieties.

Special Germain's Hairy Peruvian folder upon request.

Before planting, inoculate seed with FARMOGERM and in sure a quicker growth, a larger crop and earlier maturity.

SWINE

Nearly 200 head of Durocs, Polands and Berkshires were shown—and there never were so many high class shown anywhere in the West.

The judging of Durocs and Polands was done by Prof. L. A. Weaver of Missouri; Hampshires, Mulefoots and Chesters by Prof. J. I. Thompson of the University Farm, and Berkshires by J. L. Thatcher of Riverside.

Berkshires

Eleven exhibitors contended for honors. Prizes were very widely distributed and there was very keen interest in the judging of the Berkshire show. Both grand championships went to Glenn County.—W. S. G.

Berkshires

Exhibitors: Frank B. Anderson, Sacramento; F. A. Brush, Santa Rosa; W. M. Carruthers, Live Oak; Castleview Ranch, Owner J. Francis O'Conner, Santa Rosa; Homer Hewins, Calistoga; Elizabeth M. Holje, Calistoga; A. B. Humphrey, Escalon; Miller & Lux, Inc., Santa Rita Ranch, Dos Palos; James Mills Orchard Corp., Hamilton, Glenn County; H. L. & E. H. Murphy, Perkins; W. J. Reserve grand champion boar, Live Oak Champion, Carruthers. Grand champion sow, Forest Grove Laurel 7th, Mills Corp.

Duroc-Jerseys

The Duroc-Jersey show was large, and the pleasing feature of the show this year was that many of the best animals shown were bred by California breeders. Glenn County had 99 head—nearly half of the show—, and the Slocums of Williams won three championships.

Prof. Weaver of Missouri placed the awards.—W. S. G.

Exhibitors: L. J. Belknap, San Jose; W. V. Bennett, Nord; J. A. Borge, Los Banos; C. D. Bright, Glenn; J. M. De Vilbiss, Patterson; Leslie Dixson, Hughson; V. F. Dolcini, Davis; F. W. Gardiner, Sacramento; C. R. Hedges & J. H. McMartin, Glenn; W. F. Hollingshead & Son, Orland; Frederick M. Johnson, Napa; Elmer Lamb, Ceres; Wm. H. Manis, Willows; J. H. Minto, Patterson; Perkins & Co., Sacramento; Maurice Rucker, Sacramento; Chester W. Scott, Glenn; C. W. Smith, Willows; H. P. Slocum, Willows; J. E. Thorp, Lockeford; E. J. Weldon, Sacramento; R. Q. Wickham, Eldridge; Conejo Ranch, Newbury Park; A. Pontius, East Nicolas.

Junior champion sow, Mary Jane Pathfinder, De Vilbiss. Reserve junior champion boar, June Acres Crimson Col., Dolcini. Reserve junior champion sow, Miss You'll Do, Thorp.

Chester Whites

Three herds contended for Chester White honors.

Two events were discussed considerably among the hog fraternity; one the selling of the grand champion boar Highlander for $1000 to Lea Bleakmore of Lakeport; the other the winning of championship on the sow Wonder Bernice, shown by young Hendern last year in the pig club classes.—W. S. G.

Exhibitors: Hiram Hendern, Fair Oaks; Highland Stock Farm, Fair Oaks; N. H. Locke Co., Lockeford; Mrs. L. M. Yore, East Auburn.

Boar, two years or over—, 1, Lockeford Prince, Locke.

Junior yearling boar—, 1, Highlander, Highland Stock Farm.

Junior boar pig—, 1, Hendern; 2, Hendern; 3, Yore.

Sow, two years or over—, 1, Yore; 2 (draw), Ester, Yore and Gem Topaz, Highland Stock Farm.

Senior yearling sow—, 1, Wonder Bernice, Hendern.

Senior pig sow—, 1, Yore.

Junior pig sow—, 1, Sow pig, Hendern; 2, Mollo O., Yore; 3, Colleen Bawn, Yore; 4, Chrystal, Yore; 5, Sow pig, Highland Stock Farm.

Senior champion boar, Highlander, Highland Stock Farm. Junior champion boar, Forest Prince, Yore. Reserve junior champion boar, Pig owned by Hendern. Senior champion sow, Wonder Bernice, Hendern. Produce of dam—, 1, Produce of Won-

der Bernice, Hendern; 2, Produce of Ester, Yore.
Chester White special, Yore.

Hampshires

A few years ago in riding through farming districts in California one would see very few Hampshires—the hogs with a white band around the middle. Now, especially in Southern California, they are becoming more popular.

Three herds made a splendid showing at the state fair this year; Denker had a particularly fine pen of barrows.

The classes were judged by Professor Thompson.—W. S. G.

Exhibitors: Roy Dawson, Gardena; L. A. Denker, Saugus; Conejo Ranch, Newbury Park.
Boar, two years or over—, 1, Oro, Dawson; 2, Conejo Chief, Conejo Ranch.
Senior yearling—, 1, Dukes Allen, Conejo Ranch.

Cornwell's Kind of Heifers

At right, Anoakia Diotime Korndyke, the $1350 heifer. In center, Ciruela Walker, the first daughter of Prince Hiske Walker to freshen.

THE LINE DRAWN

Pat was celebrating and he had imbibed too freely. He punched another man in the face and got haled up before the court. The judge told him he was charged with striking a man. "Shure, yer honor, can't a man have a bit of fun?" asked Pat.

"Yes," said the judge, "but your right to have fun ended where this man's nose began." — Boston Transcript.

The Kind of Bull that Pays

Here is a Real Bull for someone

Hiske Senorita 232084

Born March 9, 1917. He is mostly white in color, a fine straight individual, ready for service.
His sire: PRINCE HISKE WALKER, who is by Prince Gelsche Walker and out of Hiske of Riverside, 711.57 pounds butter in one year, who is by Juliana King of Riverside. He is full brother to Lady Hiske Walker, 34.25 pounds butter in seven days as a junior four year old, state record in class when made.
His dam: SENORITA CIRUELA MECHTHILDE 3D, 707.31 pounds butter in one year as a senior three year old. She has seven day records of 25.78 pounds butter from 535.2 pounds milk. She is a big, strong, light colored cow of great dairy capacity. She was fourth in class at this year's California State Fair, and won the butter fat contest over all breeds.
Put HISKE SENORITA at the head of your herd if you want type, production, high per cent of butter fat, and light color. Write for price or come and see him for yourself.

H. E. CORNWELL
R.F.D. B Box 183 Modesto, Cal.

For Silo Filling and Feed Cutting

The ACME Cutter

THE SPIRAL KNIVES CUT CLEAN
THE STEEL FRAME MEANS DURABILITY

INSURE a well packed evenly cut silage by filling the silo yourself. The Acme Silo Filler will pay for itself in one season by chopping your dry feed and making alfalfa meal.

Feeding hay in the bulk is wasteful. Chopped feed is all eaten. Don't lose $3.00 to $5.00 worth of hay out of every ton you feed. Chop it with an Acme Cutter.

Northern California Livestock Notes

Written for California Cultivator By W. S. Guilford

SHORTHORN BREEDERS BANQUET

ONE of the most delightful events of state fair week was the banquet of the California Shorthorn Breeders' Association. President A. W. Foster presided—and was particularly happy in his remarks in introducing the speakers.

Prof. G. H. True urged the breeding of better animals on the farms and ranges. He believes that now is a good time to weed out many poor ones and keep fewer of the best.

John Robbins, the Shorthorn judge, said the exhibit at Sacramento compared favorably with that at the Illinois state fair which he judged this year.

Other speakers were C. N. Hawkins of Hollister, W. S. Guilford of Butte City, Prof. F. W. Wilson of Nevada, C. J. Dibblee of Santa Barbara, and Secretary D. J. Stollery of San Francisco.

WESTERN BERKSHIRE CONGRESS BANQUET

About 60 Berkshire breeders attended a splendid banquet at the Travellers Hotel, Sacramento, September 4. President Carruthers presided, James Mills was toastmaster. Among the speakers were A. B. Humphrey, Frank B. Anderson, Judge Peter Shields, J. L. Thatcher, Prof. J. I. Thompson and Prof. Weaver. The latter expressed himself as very much pleased with the quality of the Berkshires shown.

SHEEP PROSPECTS

Vice President Edward Bishop of the American Shropshire Association, predicts prosperous times for sheepmen for some years to come.

Mr. Bishop is of the firm of Bishop Bros. of San Francisco and San Ramon, large cattle and sheep raisers and owners of one of the best flocks of registered Shropshires in the West.

He reports that seven registered Shropshire ewes dropped 17 lambs one night. One had four, two more had triplets; the rest singles.

Mr. Bishop is of the opinion that there will be a big increase in the number of small flocks of sheep kept in California.

THE "CLOSE TO NATURE" HOG

It has been learned that protein and minerals must be added to corn and other grains for best results in hog feeding, that exercise is important and pasture very necessary.

A great many hogs in the Middle West are kept confined in houses and yards and fed highly concentrated feed like corn during a considerable part of the year.

This confinement, lack of range and exercise and variety of feed is an unnatural environment for a hog.

Those who have had best success with hogs in the East are those who have had their farms fenced hog tight and who have "hogged off" at least a part of the grain crops. "Hogging off" corn or grain simply consists of turning a bunch of hogs in a field of grain and letting them harvest the crop.

A great many hogs in California are grown on a "close to nature" system. On the big grain ranches and many fruit ranches, hogs are a by-product proposition. The brood sows "rustle for themselves" during a great part of the year and, unless too closely inbred and too badly treated, are vigorous and healthy and prolific. Most growers use registered boars and change every year.

These hogs get an abundance of exercise and a very wide variety of food. This ranges from green grasses, grains and weeds of all kinds to mature grain and waste fruit. They are able to "root" at will and get some tubers and other roots. Somewhere in their rounds they are able to get charcoal from burned stubble or grain or from fires made of other waste material. The salt given other stock is generally available, and the occasional death of a mule or cow provides rich animal food at times.

And where they "sort of" look after themselves in this way a hog always has a clean bed. Only by close confinement can a hog be forced to be filthy as regards its habits.

These "close to nature" hogs make money because they are largely fed on things that would otherwise go to waste.

WHAT PIG CLUB BOYS DO

"They are the finest hogs we ever had on the farm. The boys have convinced their dad that there is something in registered live stock, and you can be sure that it will not be long before every hog on the ranch will be a registered animal."

The speaker was a proud father of two "pig club" boys. The pigs had been bought at a nominal price from a public spirited breeder by the farm adviser who had turned them over to these high school boys. The understanding when the pigs were bought was that they would not need to be registered.

Now the boys and their father want to register the pigs. Which brings up a subject that has been discussed considerably by breeders of pure bred stock.

What charge should be made for registering these pigs?

Much can be said of the value registration papers would add to them — and it is, of course, "up to" the breeder as to what he will charge for them.

This is what the breeder in question has done. He has registered the pigs in the names of their young owners, paid the fees himself and made the boys a present of the papers.

The one thing he is more interested in than any other is the popularizing of the breed in this section, and he is delighted to have such a fine object lesson as these pigs afford. They have been worth a great deal to the breed and will continue to be worth more.

The work being done by the pig clubs is of great value to the swine industry. Good registered hogs have gone to thousands of farms that would never have been reached in any other way.

SOMETHING FOR BEGINNERS TO REMEMBER

Every year a good many people engage in the breeding of registered live stock. They buy a few—or many animals—from one or many sources. These animals are shipped to their new home and find new conditions, different feeds, strange quarters, new caretakers.

If the animals are shipped a great distance the breeding qualities of some of them may be impaired for months, perhaps forever.

These things naturally lead to disappointment, and many breeding enterprises are abandoned while they are in the development stage.

For in most cases, if the business is continued until the animals "come to themselves" and become accustomed to the new condition, everything turns out all right.

It would be a good thing if those who are starting flocks and herds could be impressed with the fact that the second year and not the first is the one from which results are to be judged.

Now there maybe some who, when reading the foregoing, will say; "Well, if one is to look for trouble and disappointment when buying registered animals, it will be best to keep scrubs."

This is far from the impression it is intended to convey. The same things that are apt to happen to pure bred animals are apt to happen to scrubs if they are moved from one place to another.

Ship in a registered sow from a distance, say 100 or 1000 miles. All conditions are different. She may have been badly shaken up on the trip. she may or may not do as well with her first litter as some scrub sow raised on the place. If she does not, do not judge her until after she has her next litter.

From one shipment of Shorthorns to Butte City Ranch from the East, we lost three calves and one cow. One calf was injured; two evidently had pneumonia. The cow had not been used to woodland pasture and broke a

Do This For Your Hogs

Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. The **DIP** will kill the lice and cleanse the skin, and as the hogs pass back and forth from the wallow to the feed trough, the **DRIP** will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers. Also sprinkle freely about poultry houses, pens and stables to destroy germs and avoid contagious diseases. An excellent disinfectant for the home.

leg in some brush. These losses represent considerable money and are disheartening, but now the cattle all know the pastures and the brush does not bother them and we have not lost a calf from any cause this season.

The way to lose is to quit. Stay with it and everything comes out all right.

SECOND CROP CORN

The practice of planting corn or beans after a crop of grain has been harvested has been common in the irrigated sections of the Sacramento Valley for some time—but more of it is being done each year. L. A. Nichols of Butte City has a field of fine corn on land that produced a good crop of barley. "It is very necessary to work the land and plant the crop just as soon as possible after the irrigation. If it is delayed a few days too long the moisture will be down too low and the seed will not germinate," says Mr. Nichols.

MORE ANTI-HOG CHOLERA SERUM BEING USED

More anti-hog cholera serum was manufactured last year than in any previous year, despite a decrease in the amount of hog cholera. The increased demand for anti-hog cholera serum is ascribed to the greater value of hogs, with the consequent greater loss when one dies, and to the fact that hog raisers are becoming more appreciative of the value of using serum manufactured under federal supervision.

Department of agriculture officials warn hog raisers against the indiscriminate use of medicines or proprietary preparations other than serums, as experience has shown that nothing except serum, properly prepared and administered, is effective. Medicines other than serums, according to department officials, are worse than useless, because they not only fail to cure or prevent disease, but allow the loss of the animals they are advertised to save, thus taking money from the farmer and meat from the nation's supply.

A CORN CRIB PROCLAMATION

To All Anti-American Rats:

Be not discouraged by the almost rat cuteness of these Americans in building their cornhouses on little piers with curved slippery sheet-metal over the caps just under the floor joists. We find that these men soon forget what they have learned, and fall back into weak, careless customs.

This fall, when you begin to return from the fields to your winter homes, hopefully look to see if some man has not left a ladder conveniently leaning against the door, or—what is just as good—has used the shelter of the building to make a pile of farm tools reaching from the ground high enough up for you to climb within jumping-reach of the cracks in the floor.

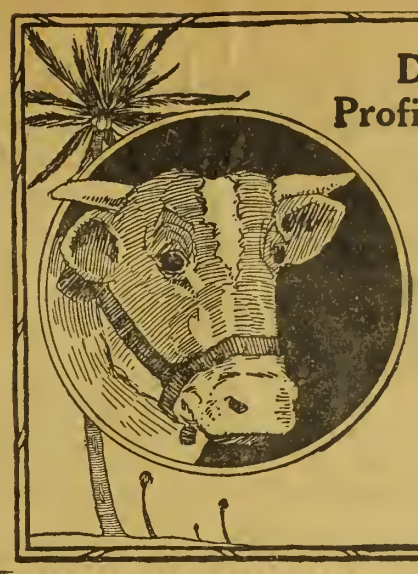
Once inside, you need not worry about these stairways being taken off. —Wilhelm.

SOUTHERN CALIFORNIA FAIR

War time agricultural development and live stock raising will be the keynotes of the coming Southern California fair to be staged at Riverside, October 8-12. With official government exhibits being sent to Riverside from Washington, national recognition by national live stock associations, exhibits from foreign countries and state and national governments the scope of the fair will be broader than any ever staged in the southland before.

Everything in connection with the fair will be of a patriotic nature. The naval band from the submarine base at San Pedro will furnish music one day at the fair. The soldiers of March field, the government aviation base, will present drills and battle representations. The aviators will present thrills in the air before the grand stand. Premiums will be paid in Liberty bonds, thrift stamps or cash prizes depending on which the exhibitors desire. People, men, women, boys and girls, everywhere are invited to enter something at Riverside for the attractive prizes. Send for a prize list.

Farmer's short courses will be given at the Davis university farm September 30 to November 8.



Do You Want Profit Producing Cattle?

Then feed them profit producing food. Because of the easily digestible protein in COPRO its nourishing value is exceptionally high and the percentage of waste in assimilation is exceedingly low.

Repeating Shotguns and Rifles
for Shooting Right

WHETHER .22 repeater for the boy or autoloading shotgun for yourself, a high power autoloading rifle for that well earned deer hunt or a pump gun or rifle for general use, buy a Remington UMC and know you are getting the *right* arm.

Every Remington UMC shotgun or rifle is *right* in every mechanical detail—hammerless, with solid breech, has positive safety lock and either autoloading or slide action. And *right* in shooting qualities, balance, fit, material, workmanship, finish and appearance.

Buy Remington UMC Shotshells or Metallic Cartridges and add the *right* finishing touch. For example, for squirrels, woodchucks and other small animals, the Remington UMC .22 cartridge with hollow point bullet gives best results.

The wonderful Wetproof process used exclusively in the manufacture of Remington UMC Smokeless "Arrow" and "Nitro Club" Shotshells, produces a shell which can be exposed to wet for hours without harm.

In *black powder* shotshells, buy the old reliable Remington UMC "New Club," now wetproof sealed at turnover (crimp) and top wad.

Some Interesting Figures

Written for California Cultivator By Jean A. Koethen

FIGURES don't lie, neither do they tell the whole truth. The fact is, they must always be taken with due regard for circumstances. If circumstances are so far in the background that they cannot be visualized, a fig for your figures. All this is merely in deprecation of any attempt to attach undue importance to the following figures from the report of Helen Dow Whitaker, director of the All-Northwest laying contest at Pullman, Washington, which began November 1, 1917, and is not yet quite finished. Part of Mrs. Whitaker's figures are for the month of July, 1918, and part for the nine months beginning November 1 and ending July 31.

There were 110 entries in this contest, some of them being pens of five hens and some pens of six. There is nothing in the report to indicate how many hens were in any given pen, but the presumption is that most pens contain but five, pens of six being the exception. It seems quite likely also from the reports that the majority of the hens entered were white Leghorns, but no figures are given. For instance, in the list of pens having the highest sales value of eggs for the nine months, 14 of the 20 pens listed are pens of Leghorns, 3 are Rhode Island Whites, and there are one each of Barred Rock, R. I. Red and Minorca. As these pens represent but one-sixth the total number entered, we can only guess what proportion of the remainder may have been Leghorns. We know, however, from other lists, that there were pens of Orpingtons, Buff Leghorns and Wyandottes, none of which appear at all on this honor roll.

In the above mentioned list of pens having highest sales value of eggs, it is significant that the first pen was a pen not of Leghorns but of Barred Rocks from Oregon agricultural college. The eggs laid by these five or six hens were worth $35.56 for the nine months. Next comes a pen of Washington Leghorns with $35.46 to its credit, and third is a pen of Rhode Island Whites which netted $35.14. Then comes another pen of Leghorns and another of Rhode Island Whites, and farther down the list are another pen of R. I. Whites, one of Reds and one of Minorcas. All the rest are Leghorns. In a similar honor roll of hens with highest sales value of eggs, a White Leghorn leads, but second place is taken by a Rhode Island White. The roll of 20 pens, with value of eggs ranging from $8.71 the highest, to $7.32, the lowest, consists of 13 Leghorns, four R. I. Whites, two R. I. Red and one Minorca.

If we were to go by these figures, with nothing else to guide us, we should be forced to conclude that Rhode Island Whites are the best layers of all the heavy breeds, but common sense tells us these were probably a few exceptional birds, and a study of the names of entrants shows that three of the hens in the roll of honor were entered by one breeder, H. J. Kingsbury of Twin Falls, Idaho. The leading pen, however, belonged to a British Columbia man. Turning to the list of hens laying the highest number of eggs in the nine months, we find a White Leghorn first with 236 eggs, and one of Mr. Kingsbury's R. I. Whites second with 220 eggs.

This honor roll of hens laying over 200 eggs in nine months is interesting. Next following the R. I. White come three Leghorns, with 215, 215 and 211 eggs respectively, then a Minorca and a Rhode Island White, with 210 eggs apiece, then two Leghorns, 208 eggs each, and a R. I. with 207 eggs. Farther down the list, with 204 eggs to her credit, is the Barred Rock from Oregon agricultural college which was the best layer in the pen having highest value of eggs. The reason, no doubt, for Barred Rocks leading in this one respect is that, being winter layers, they laid more eggs during the period of highest prices than did the Leghorns.

In considering which is the most profitable hen to keep, we must not lose sight of cost of feed. Our data for this in the report of Mrs. Whitaker is rather meager, for the summary of feed cost and egg production is given only for the month of July. From it we learn that the Leghorns in this month consumed two and a half pounds less of feed than the Barred Rocks, which were the heaviest feeders of all; that the order in which the different breeds stood with respect to food consumed was: White Leghorn (least), Buff Leghorns, Wyandottes, R. I. Reds, Minorcas, Orpingtons, Barred Rocks, R. I. Whites, White Rocks. The Leghorns laid more eggs and ate less, and their feed cost less. The feed cost per dozen eggs was as follows: White Leghorns, 17.8 cents; R. I. Whites, 22.6; Minorcas, 23.5; White Rocks, 26.6; R. I. Reds, 26.8; Wyandottes, 27.5; Barred Rocks, 27.6; Buff Leghorns, 33.4; Orpingtons, 34.6. The return above feed cost for the average fowl of each breed was: Leghorns, 40 cents; R. I. Whites, 32.4; Minorcas, 26.9; White Rocks, 22.6; Barred Rocks, 19.4; R. I. Reds, 18.6; Wyandottes, 16.7; Buff Leghorns, 7.9; Orpingtons, 7.2. But there is a notable difference between the average fowl of each breed and the best fowl. The best Leghorn gave a return above food cost of 71.9 cents; the best Barred Rock, 60.7; the best R. I. Red, 57.8, and the best R. I. White, 53.1 cents. This, remember, is for one month, and that not one of the best months. The lesson from these figures seems to be that it pays to keep the best, and the best is within reach of all of us. A friend who owns but two Barred Rock hens, and those of no special quality, told me a few days ago that one of them, according to a carefully kept record, had laid 204 eggs since the beginning of the year and was still laying. Probably if we kept similar records we should find in our little backyard flocks many hens nearly up to the average of the All-Northwest layers. But if we keep no record, we are as likely to breed from the worst layer as from the best.

Are there any other conclusions to be drawn from these contest records? This would seem most obvious, that for producing most eggs at least expense the Leghorns has all other breeds beaten to a frazzle. Other breeds are better for meat; others serve better for the dual purpose of eggs and meat; but for profitable egg production the little White Leghorn is the bird to bank on. Oddly enough, the Buff Leghorns made almost the poorest showing of all. For both eggs and meat, nothing has yet equalled the American breeds, Rocks, Reds and Wyandottes, and an occasional individual in these breeds is as good a producer as the average Leghorn.

Eggs all through the MOULT!
SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).

HOW TO FORGET

If you were busy being kind,
Before you knew it you would find
You'd soon forget to think 'twas true
That someone was unkind to you.

If you were busy being glad,
And cheering people who were sad,
Although your heart might ache a bit,
You'd soon forget to notice it.

If you were busy being true
To what you know you ought to do,
You'd be so busy you'd forget
The blunders of the folks you've met.

If you were busy being right,
You'd find yourself too busy quite
To criticize your neighbor long,
Because he's busy being wrong.

—Rebecca Forseman.

A LUMP OF ICE

Written for California Cultivator
By Ida M. Blake

ALL day she sits huddled in the doorway, with outstretched hand, a pathetic figure, yet hardly anyone sees her there.

Her face is seamed and wrinkled, and bronzed with the sun of many summers, yes, and winters too, for she sits at the old post year in, year out. Her cheeks are hollow; her mouth drawn tight, and her eyes sunken like two deep wells of water.

In the morning, you can see her crawl slowly down the hill, keeping close to the high buildings, as though seeking their protection from even the gentle breeze that might chance to blow against her poor weak body. Her rounded back and shoulders hoop over like a letter "C", and, as a playful breeze skips around the corner, she draws the black shawl closer around her head and body and crouches down in her accustomed corner. A deep sigh escapes her as she stretches out her hand to passersby, and so they day begins.

It is a busy street where she is sitting—in the heart of a busy city. People are passing back and forth, here and yon, all day. Rich and poor, crippled and strong, old and young, go by in an endless procession, yet still the beggar sits, with empty, outstretched hand. Morning passes to noon, and as the hot summer sun of this semi-tropical city creeps higher, it begins to shine on the poor, black, old lady, and she sighs again.

"Not a centesimo this morning, and what will Tony do to me tonight. He was so mean and cross last night because I brought home only two dimes and a few pennies. Oh if Tony could only get some work and keep it. Time and again the big man comes after him and takes him away and locks him up. Then when he comes home again, he swears he will be good, and get steady work. But the very first night, when he goes by "Terrys", something seems to draw him in that door, he says, and then he spends all he has earned, and comes home to my Nannette, oh so ugly. If the big man would only do as he said he would, and shut the doors of Terry's place and put Terry behind the bars awhile, then Tony would be all right. Because Tony is good, and he loves my Nannette when he is himself, but oh, he beats her and swears at her when he comes home from Terry's place. And now, tonight if I go home empty-handed, I'm afraid, oh I'm so afraid."

And a tear rolled out of the poor old lady's eye, and coursed its way down her wrinkled cheek.

Just then a gruff voice said, "Hello Grandma, pretty hot today, hey, here's a piece of ice for ye.'"

The old lady looked up and saw standing by her side, an ice-man with outstretched hand, holding a piece of ice toward her. How good the dripping piece of crystal looked, for she was hot and her tongue and mouth were parched and dry. She took the piece of ice, and how her face beamed at the little act of kindness shown her, just when all life looked so black. The ice-man grinned and walked away, unconscious of the good he had done. There were many passers-by who saw the incident, and several were touched by it, so that after going past, two men put their hands into their pockets, drew out half a dollar apiece, went back to the old lady and dropped the coins into the outstretched hand.

A little child went by with its mother, and seeing the old lady, asked if she might give her a flower she was carrying. The mother had seen the incident also, so let the child do as she wished.

The old lady's cup of happiness was filled to overflowing that day, and truly it was just a little lump of ice from the big-hearted, though gruff appearing ice-man, that was the means of such happiness.

BAKU

One of the most picturesque and interest intriguing feats of the war — doubtless because we know so little of the country and circumstances and so much of the fiber of the Englishmen who have carried it through—is the taking of Baku, the great Russian oil center in the Caspian Sea.

The briefest of dispatches in the newspapers have announced a march of British forces from Bagdad across Persia to the shores of the Caspian and their seizing of the rich Baku fields—ahead of the Germans.

Of what happened since we have heard nothing—it is all a part of the history yet hid behind the veil of censorship. Meanwhile here is a little description of Baku and its history, taken from the National Geographic, which will be of particular interest:

The National Geographic Society issues the following war geography bulletin on Baku, Russia's great oil city, occupied recently by a British force: "The city of Baku, built in the form of an amphitheater on the south side of the Apsheron peninsula, which juts far out into the Caspian Sea, is the Tampico of the Slav empire. Two vast oil fields, containing more than 2700 wells, make it the chief oil center of Europe. Had the Teutonic powers succeeded in reaching it before the British forces occupied it, the blow would have been even more serious to the Allied cause than was the seizure of the Rumanian oil fields by the German army of occupation many months ago.

According to a census the year before the outbreak of the war, Baku was a city about the size of Oakland, California, Providence, Rhode Island, or Toledo, Ohio. It is the chief city of the Russian province of the same name, and is situated in the midst of an unattractive, treeless plain which stretches along the western shores of the Caspian. The Caspian is 84 feet below sea level, and Baku rises only 30 feet above the great inland sea, so that it is more than 50 feet below the ocean level. Many centuries ago the Persian fire worshipers discovered that the natural gases issuing from fissures in the rocks near Baku would burn, and there may be seen, a few miles from the city, the remains of one of their ancient temples. The city itself was in existence as early as the sixth century. It did not become a Russian possession until a little more than a hundred years ago. The upper part of the city, corresponding to the back rows of an amphitheater, is the picturesque Tartar quarter, with its many narrow lanes and Oriental ba-

LOS ANGELES

zaars. A fifteenth century palace of the khans is in a very dilapidated condition, and has been used for many years by the Russians as a military magazine. The most characteristic structure in the town is the massive Kis Kale, or maidens' tower, which rises to a height of 147 feet and which is now used as a lighthouse. It dates from the Byzantine period. Four-fifths of all the oil produced in the Russian empire comes from the Baku fields. The high-water mark of production was reached 14 years ago, when the output of the district was nearly 10,000,000 tons of crude petroleum. In 1905, however, there was a disastrous fire which considerably curtailed production for a time. The latest authentic figures on production are those for 1915, when a little more than 7,000,000 tons were produced. Much of the output of the wells, which vary in depth from 500 to 2000 feet, is transported by pipe line to Batum, on the Black Sea, but is also connected by rail with this seaport as well as with Rostov-on-the-Don. The former city lies 560 miles to the west, by way of Tiflis, and the latter is 818 miles to the northwest. In addition to its oil interest, Baku has dry-docks, flour mills, sulphuric acid works and tobacco factories, while it is the chief entrepot for raw cotton, silk, fruits, dried fish, wines and rice produced in Persia and the Transcaucasus territory. The town derives its name from the squalls (badkube), which are frequently very violent on this part of the Caspian coast.

SALT DOWN THE SURPLUS

Where there is a big family to be fed through the winter and a rush of summer work, the surplus of vegetables might well be salted down. The process is exceedingly simple and the only equipment needed is good water-tight kegs. While salted vegetables may not equal fresh in quality, they help materially to build up the food reserves and, when they are well cooked and seasoned, the flavor, though different from that of fresh vegetables, is good. Vegetables put up as directed will keep their crispness and color.

Directions

Gather vegetables when in the best condition and pack while they are crisp and tender. Cover top with grape leaves, chard or horseradish.

Weight with a clean stone resting on an inverted plate. Do not allow molds to form, and keep vegetables covered with brine.

When all bubbling has ceased about a week after packing, cover the surface of the brine with cottonseed oil or melted paraffin. Store in a cool place and examine once or twice a week for a month.

For the brine allow 1 2/3 cups of salt to one gallon of water. This is a ten per cent salt solution.

For a salt-and-vinegar solution allow three-quarters cup vinegar to one gallon of above solution.

Peppers

Select medium large, plump, green peppers. Remove stem and enough of the tops to remove seeds. Follow directions above using the salt-and-vinegar solution. When taken from the brine, peppers should be firm, crisp, of good color, and spicy to astringent in taste.

Green Tomatoes

Salted green tomatoes may be made into tomato stew, stuffed tomatoes, breaded tomatoes, salad and pie or converted into mincemeat and chutney. Choose well developed green tomatoes and pack in salt solution. Green tomatoes packed in salt-and-vinegar solution are good for salads and relishes.

When taken from the brine the green tomatoes will be slightly discolored but firm and of good quality. Soak in cold water for two hours before using.

Ripe Tomatoes

Select medium sized ripe tomatoes free from cracks or bruises and pack in brine solution. Follow directions and your tomatoes will be firm and of good color when removed from either the brine or the salt-and-vinegar solution.

Ripe tomatoes preserved in the salt solution generally require soaking for two hours before being used. After this soaking the skins slip off easily, and the tomatoes can be used as though fresh. For soups or scalloped or casserole dishes, soaking for one hour is usually sufficient, for the excess salt seasons the other ingredients.

Ripe tomatoes preserved in the salt and vinegar solution require soaking for only about 30 minutes. When used in combination with fresh vegetables they need not be soaked at all. The skins slip off easily, and the flesh is firm. The color and the flavor of the tomatoes are practically no different from those of fresh tomatoes.

Recipes for using vegetables preserved in this way will be given next week or in an early issue.

SUGAR SUBSTITUTE

Mrs. D. C. Evinger, Selma

Here is a substitute for sugar that I find excellent in most any cooking.

Take good ripe grapes of most any kind and pull them off the stems then wash clean, put in a kettle and cook until soft then put in a sack of close texture and hang up so the juice will drain out. Mash the sack so you get all the juice then boil until thick on a slow fire and you will have a sweet syrup good as honey and not so high priced.

The seeds and pulp left in the drain sack can be mashed through a seive to remove seed. Then season with cinnamon and spice to taste and boil one-half hour and you have a good jam to spread on the bread.

THE "PIG-KNITTER".

In her knitting bag of satin
She had fifteen yards of tattin
And a scarf crocheted in white and baby blue.
She will work for endless hours
To embroider foolish flowers
In astonishing designs of varied hue.
She enjoys it so much better
Than the knitting of a sweater,
A helmet, or a beanie, or a sock;
She will knit some useless trifle,
But the man who packs a rifle,
If he counts on her, will get an awful shock.
She's a "pig-knitter."

—Frederick L. Wheeler.

WHAT DO YOU KNOW ABOUT PIANOS

Assuming that you can "tell a good tone," can you judge the hundred and one things which enter into the making of a Piano, the things which play their part in making and maintaining a good tone? Do you know the difference in plate and scale design? Are you familiar with the various "actions"? Are you a judge of the wood, the wire, the felt, the veneers and all the other materials which enter into the making of a Piano?

Probably not—not one person in a thousand possesses this expert knowledge. After all, when buying a Piano you depend greatly upon the expertness and the integrity of the Dealer or House. Let your greatest care be the selection of the Piano House. Tell that House what you would like and what you can afford and they will guide your selection of a Piano with expert judgment and a sincere desire to serve you well.

Beware of a "cheap piano"—in the end it is the most expensive. Avoid the alluring statements of some dealers—they are but pitfalls to catch the unwary. Protect yourself by going to a Piano House with a reputation for integrity and fair dealing—you will never regret it.

We invite you to call at any of our stores — or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.

Sherman, Clay & Co.

Kearny and Sutter Streets, San Francisco.
Fourteenth and Clay Streets, Oakland
Ninth and J Streets, Sacramento
325 E. Main Street, Stockton
J and Merced Streets, Fresno
190-192 S. First Street, San Jose

Stores also at Vallejo, Portland, Seattle, Tacoma, Spokane.

Requesting your local merchant to stock articles advertised in the California Cultivator helps your town, the advertiser and the Cultivator.

Styleplus Week the nation over

Copyright 1918 Henry Sonneborn & Co., Inc.

America's only known-priced clothes

Now going on—this Fall season exhibit—staged in every city and town where Styleplus Clothes are sold.

While thousands of Styleplus suits will be sold, the big object is to show the public what values we can produce by centering our volume on a few grades, thus permitting us to manufacture scientifically at low cost.

This season when clothing prices are *up* you can buy a Styleplus at a price never considered unreasonable for a good suit of clothes. The Styleplus plan of supplying reliable quality at known price helps you more than ever in times like these.

Wear Styleplus Clothes and you march in Uncle Sam's great thrift army because you make both sides of your dollar count. Visit a Styleplus Store during the coming week.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AB) for Styleplus booklet and name of local dealer.

Get That Whiff?

These crispy mornings—how you will enjoy the fragrance of a steaming-hot cup of *Jevne's Coffee.*

Fill a cup with *Jevne's Coffee*—and drink. Its flavor will not only win your favor, but its fragrance will tempt you to another cup.

And, too, *Jevne's Coffee* is an agent of economy, for good coffee requires less sugar and cream to meet your taste requirements.

Be sure to say *"Jevne's Coffee"* to your grocer.

HAY

Under date of September 13, Scott, Magner & Miller says:

Receipts past week, 1331 tons. These receipts are light for this season, as usually during August and September we expect our largest receipts. Trade is very light and the only demand seems to be for fancy wheat hay.

There is a great deal of alfalfa yet on the rivers as well as in the interior districts, and as the central portion of California is having an abnormal rainstorm a great deal of this hay is sure to be materially damaged and no doubt will be shipped to this market to be disposed of. The market is in no condition at present to receive this damaged hay as it must be fed immediately and cannot be piled away damp. With the slight demand for hay in this city it is a problem what can or will be done with the hay that is damaged from the rains.

We beg to suggest to shippers of hay that they consult with their consignees before shipping to them as unless this is done the hay is liable to arrive on this market in such quantities that consignees will be unable to place it and serious trouble is bound to follow Heavy arrivals of alfalfa during the week have been difficult to place with the natural result that prices are easier.

A few cars of straw arrived but had to be handled by consignees.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling must be added according to conditions:
Fancy Wheat Hay (large 5 wire bale) .....26.00@27.00
No. 1 Wheat or Wheat and Oat Hay .....23.00@25.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@22.00
Choice Tame Oat Hay .....24.00@26.00
Other Tame Oat Hay .....21.00@23.00
Wild Oat Hay .....19.00@23.00
Barley Hay .....19.00@23.00
Alfalfa, first cutting .....16.00@20.00
Alfalfa, second cutting .....22.00@24.00
Stock Hay .....18.00@21.00
No. 1 Barley Straw, bale .....50@80

GRAIN AND FEED STUFFS

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

	Per cental.
Hard white—	
No. 1	3.66⅔
No. 2	3.61⅔
No. 3	3.55
Soft white—	
No. 1	3.63⅔
No. 2	3.58 1-3
No. 3	3.51 2-3
Club and Sonora—	
No. 1	3.60
No. 2	3.55
No. 3	3.48½

For sacked grain add 9 cents per bushel of 60 pounds to above prices. Deduction of three-fourths of a pound is made for weight of standard grain bag. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to its merit.

Barley — No. 1 feed, 2.37½@2.45 per cental; milling, 2.55@2.60.

Oats — Red feed, 2.55@2.65 per cental for ordinary and 2.75@2.85 for choice; seed do, 2.90@3.10, with recleaned at 3.20 @3.40; black, 2.50@2.65 for feed and 3.00 @3.25 for seed; do, recleaned, 3.50@3.75.

SEEDS

Prices in round lots, lb.:
Millet, recleaned .....5@5½
Flax .....8@8½
Hemp .....5½@6
Rape .....2½@5

Citrus Fruit Market

Los Angeles, September 18, 1918.

Oranges are still commanding long prices, Valencias sometimes going to $11. This is for exceptionally fine stock in exceptionally fine markets.

Lemons on the contrary are lowest of the season. There is indication of slight improvement, however. There are at present practically 125,000 boxes of foreign lemons in sight.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 13,597 cars, lemons 5435, total 19,032. To same date last season, oranges 38,084, lemons, 7415, total 45,499. Central California this season: oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 845.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending September 16: Apples, 136; berries, 5, beets, 2; cabbage, 6; cantaloupes, 15, casabas, 16; carrots, 4; dried apples, 1; dried apricots, 16; dried beans, 41; dried figs, 23; dried peaches, 28; dried potatoes, 1; dried prunes, 13; garlic, 2; grapes, 1619; lettuce, 19; mixed fruit, 15; mixed vegetables, 24; mixed fruit and vegetables, 41; mixed dried fruit, 3; onions, 92; peaches, 396; pears, 164; peppers, 6; plums, 2; potatoes, 206; quinces, 5; raisins, 114; strawberries, 14; tomatoes, 119; watermelons, 32; Arizona watermelons, 2; Arizona peaches, 1.

There is no deferred classification in food conservation. We are all in Class I; all in camp, and ready to go "over the top" when we must further conserve.

Not "Bit" but "Utmost"—the end is worth our "All."

VETERINARY

Continued from Page 283

or it may be a contagious disease that is seen occasionally at this time of the year. Keep them in a darkened place and sponge out the eyes with warm water that has a tablespoon of borax in each pint. For the parched skin rub them all over with olive oil or cocoanut oil. Coughing is one of the symptoms of hog cholera but is caused by other troubles also. Feed them some sour milk if you can get it. Your feed is not good enough. They must have some whole grain, rolled barley or corn meal.

ANNOUNCEMENT!

We, B. G. Doak and E. C. Doak, formerly owners of Standard Corrugated Pipe Co., wish to announce that we have formed a corporation known as the

Doak Tractor Company

For the distribution of Farm Tractors in California. We have done this after a thorough study of the tractor situation for the past year, having always in mind a tractor that would be the most PRACTICAL for this territory and which would give the greatest amount of EFFICIENCY. The INTERSTATE TRACTOR CO. of Waterloo, Iowa, knowing of our many years experience with conditions in California, invited us to take the California agency for their tractors. We welcomed their suggestions, but made no decision until we felt that we could recommend and conscientiously distribute a Tractor which is the best on the market and will give the greatest SERVICE and ECONOMY.

The New 1918 Plow-Man

13-30 and 15-30

Marks the Greatest Step in Reserve Power, Refinement of Construction and Finished Details

Correctly Designed
All Standard Parts
Motor, 4-cylinder (Oversize)
Controls, Rear drive type
Traction, Chassis on 4 wheels.
Transmission, unit with motor.
Cooling System, (Oversize) 8½ gal.
Front Axle, oscillating type.

Model 15-30 Pulls Four Plows
Model 13-30 Pulls Three Plows

Correctly Designed
All Standard Parts
8 Dry Discs.
Clutch multiple,
Buda Motor.
Bennett Carburetor.
Dixie High Tension Magneto.
Foote Strite Transmission.
Perfex Radiator.
Hyatt Bearings.
Turning Radius 15 feet.

Farmers have learned in the past few years that satisfactory work from a tractor demands EXCESS OF POWER. The machine rated at full capacity is overloaded, and therefore soon worn out. The only tractor of permanent value is that one combining HIGH QUALITY of CONSTRUCTION with plenty of reserve power—PLOW-MAN tractors are of simple construction, making it possible for a boy to handle them. In rating the horse-power of these tractors they have provided for a ONE-THIRD RESERVE POWER which means that under a normal load these tractors have a ONE-THIRD RESERVE POWER for all emergencies, and which assures a long life to the tractor. From an ECONOMY standpoint the PLOW-MAN is establishing some wonderful records in the States of Kansas, Iowa, Illinois and Nebraska.

Plow-Man Tractors
Have an Established Record for:
Smooth operation.
Easy handling.
Fuel economy.
Very low upkeep costs.
Long life of tractor.
A satisfied owner.

Live Agents Wanted

If PLOW-MAN TRACTORS are not represented in your territory here is your opportunity. Invite us to submit our proposition; it will interest you and our first carload of PLOW-MAN TRACTORS is here. We invite your inspection.

Service
We have installed a parts department with a full supply of PLOW-MAN parts which insures immediate service to the PLOW-MAN Owners. This is a feature which has been one of the drawbacks in the tractor business, and should be given serious consideration by the prospective buyer when about to make a purchase.

CALIFORNIA CULTIVATOR

and LIVESTOCK and DAIRY JOURNAL

Los Angeles — An Illustrated Weekly for the Rural Home and Ranch — San Francisco

Vol. LI — September 28, 1918 — No. 13

A GREAT PORTION of the world is today free from bondage and enjoying its liberty because of the bondage the peoples of Belgium, Servia and Eastern France are enduring. The wonderful fight put up by those sturdy peoples gave the world a chance to gather itself and ward off the blow of the Hun.

It took America long to appreciate the fact that the world's liberties were endangered and that selfishness alone demanded more than passive watching. We are now taking and doing our part with characteristic American vim; are fighting with all our might. "We" means the two millions of our best men in the trenches and ninety-eight millions at home investing in bonds---not German but Liberty.

The boys are giving of their life's best---we are investing in the best security on earth. No man in our army or navy was ever asked to fire a shot for an unjust cause. No person has ever been asked to invest in U. S. bonds that are not worth 100 cents on the dollar plus.

There will be no lack and the millions will lend billions Over Here that the boys may win Over There. The more we buy, the fewer of them will die.

If we can't fight, our money and our food can.

Freemen buy bonds; Slaves wear them.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

Can we add a word to the editorial on the cover of this issue? Perhaps we can; but we don't need to. Buy bonds.

GASOLINELESS SUNDAY

The country east of the Mississippi has had its trial of the gasolineless Sunday. Its observation was almost universal, and life was made miserable for those who failed to observe the regulations. No definite orders have been given as to observation of the day on the Pacific Coast, but presumably it is coming. Many auto owners are anticipating the need and saving on gas.

EXHIBIT AT THE FAIR

There are still some fairs to come. Everybody needs the inspiration of everybody else in this year of our greatest production. This not because we lack patriotism, but because we have it and we want to do our utmost. We need sweets. The farmer who has produced it in the form of honey, sorghum, sugar beets or any other product, should show of his best. We need acid fruits. The grower who is excelling should inspire the rest of us to equal his best. And so with cereals or other farm crops, especially home dried or canned products of all kinds.

TAX DEDUCTIBLE

The treasury department has reversed its former ruling that an irrigation tax payment is not deductible in making return for one's income tax. The department formerly held that irrigation taxes were levied for making improvements, and that improvements on real estate were a permanent investment and not an expense. Very often this is not the case, and the department has made most proper reversal, at least to the extent that "assessments paid under the laws of California are to be used in defraying interest and maintenance charges; but not to the extent that they are used to pay the cost of construction or the principal of bonds issued for that purpose."

SAVE THE CAST-OFFS

Winter is coming, and Belgians, Servians and many others in Europe will go cold. There has been no manufacture; shoes and clothing are practically all gone. No matter how badly worn our cast-off clothing is, it is wanted for shipment to Europe, or in case it is entirely beyond repair, if of wool, is shredded or manufactured into shoddy for the making of cloth to keep people warm. There are special organizations, but the Red Cross will handle and forward all such clothing. Do not clean or make repairs, as it is desired to give the people over there the employment which they need in making the clothing wearable. Save everything, even underwear, hosiery, badly worn sheets or cases, all muslin, worn towels, old curtains and especially wool in any form.

"Every day the great principles for which we are fighting take fresh hold upon our thoughts and purpose and make it clearer what the end must be and what we must do to achieve it. We know more certainly than we ever knew before why free men brought the great nation and government we love into existence, because it grows clearer and clearer what supreme service it is to be America's privilege to render to the world. The anniversary of the discovery of America must therefore have for us in this fateful year a peculiar and thrilling significance. We should make it a day of ardent rededication to the ideals upon which our government is founded, and by which our present heroic tasks are inspired.

"Now, therefore, I, Woodrow Wilson, president of the United States, do appoint Saturday, the twelfth day of October, 1918, as Liberty Day. On that day I request the citizens of every community of the United States, city, town and countryside, to celebrate the discovery of our country, in order to stimulate a generous response to the Fourth Liberty Loan. Commemorative addresses, pageants, harvest-home festivals, or other demonstrations should be arranged for in every neighborhood under the general direction of the secretary of the treasury and the immediate direction of the Liberty Loan Committee, in cooperation with the United States bureau of education or the public school authorities. Let the peoples' response to the Fourth Liberty Loan express the measure of their devotion to the ideals which have guided the country from its discovery until now, and of their determined purpose to defend them and guarantee their triumph."

WAR FINANCE

There has been formed at Washington the War Finance Corporation, the first activity of which has been the formation of cattle loan agencies. From the first circular regarding this agency we note that the corporation considers that the business of raising live stock is contributory to the prosecution of the war, and, in proper cases, is willing to give financial assistance where needed, preferably by lending to banks, trust companies, and other financial institutions which make loans on live stock. All banks have been advised by the federal reserve bank of their respective districts how this assistance may be obtained.

We have not heard of the activities of this association in this state, but from the above we take it any cattleman's banker can give him definite information regarding any Coast activity.

BEAT 'EM TO IT

These are Fourth Liberty Loan days. The whole United States is being organized into a fighting force which will give for this campaign the usual "over the top" return. Presumably everyone who reads these words has been included in this great working organization, but in any case, as we are all to subscribe, may we not beat the solicitor to it and have our subscription made on this, the first day of the campaign? As these words are written we have not yet been given the total amount of the loan nor the time at which the bonds mature, but the interest is 4¼ per cent; they are as good as gold; and the country needs the money.

The average for each man, woman and child is somewhat under $100, but of course great numbers of us must do vastly more than that. Let us give—as the boys in the trenches give—of our best and to the fullest limit.

NOT SO BAD

Reports from several fruit drying and other sections of the North indicate the injury is not so great as at first anticipated. The storm seemed to center in the Santa Clara Valley, where nearly six and a half inches fell. In that section prunes still on the trees were, many of them, dropped into the mud, and those on trays which could not be stacked because of lack of labor, began to soften or "grow" before the seven days' downpour was over. Vast quantities of table grapes have been softened and reduced from table grapes to wine grapes, but fortunately the wineries are paying exceptionally high prices. Much of the grain was still out, but owing to its being quickly spread and dried, it is now estimated that that particular loss may not exceed one per cent. The loss will reach many millions of dollars, but not so many as at first anticipated.

THE FARMER AND THE DRAFT

The war department has ruled that exemption boards are to consider farm labor requirements in order that necessary food production may be maintained. In this respect the department of agriculture writes:

"In the new draft the district boards are charged with the duty of putting into deferred classes those persons who are more likely to further the war by remaining in civilian occupations than by entering the army. Accordingly, three advisers are to be selected for each district board—one for agriculture, one for labor, and one for other occupations. The agricultural adviser will be appointed by the board upon the recommendation of the secretary of agriculture. The advisers are not members of the board but may, when invited, attend its meetings."

The duties of the advisers who will be appointed will be to place men where they can serve best to help win the war. These advisers will be able to help greatly the district boards to keep in agriculture the necessary workers. These workers, whatever may be their inclination to enter military service, should stand ready to serve in any capacity in which they can contribute most toward a speedy ending of the war. In order that this may be done a frank statement should, in each case, be made to the boards. It is believed that it will frequently require as much courage on the part of many men to remain in their civilian occupations as to waive deferment.

This Week's War Notes

The Fourth Liberty Loan drive begins today.

Answers to questionnaires by America's 13,000,000 registrants are flooding draft boards.

The House has adopted the Senate prohibition amendment by a vote of 124 to 37, and America will be dry after July 1, 1919.

Consul-General Poole, representing America in Moscow, and for whose safety there has been much concern, is now safely out of Russia in Finland.

This has been another Allies' week. There is activity on three fronts. Advances are being made in northern France and in Flanders; others in Macedonia and in Palestine.

In Palestine Gen. Allenby has surrounded and captured 25,000 Turkish troops, great quantities of stores, including 260 big guns, and practically crushed Turkish military activity. It is anticipated this will have great influence on Turkey and Bulgaria.

It is anticipated that men now training in Pacific Coast cantonments will soon go across to Vladivostock and aid in the Siberian campaign. The situation has materially cleared in Siberia. The Japanese cavalry has captured Blagovieshtchensk, and the Allies are proceeding slowly south from Archangel and with little hindrance.

The kaiser went to Metz to put some pep into his soldiers, and he said: "The Americans said that they would give Alsace-Lorraine to France. Efforts are now being made by the Americans to carry out that promise. I am sure, however, that you, together with my army, will give the enemy proper reply to such a daring enterprise."

The smash into Bulgaria has netted over 20,000 prisoners and 200 heavy guns and three armored trains to the English, Greeks and French. French cavalry is doing some especially effective work. The advance now totals over 60 miles, the last two days netting ten miles each day. Farther west on the line the Servian troops are doing most effective work. They have likewise advanced their line over 60 miles since September 15.

The Hindenburg line has been passed in several places, especially important advances being made around St. Quentin and Cambrai. The Germans are strengthening their lines by bringing up their big guns. American troops hold all of their gains in front of Metz. No further advance is reported, but lines are being strengthened and large guns brought up. American shells have already been dropped in forts surrounding the city. The French captured 10,000 Teutons near Laon late last week.

More Power---Fewer Men---More Food

WE IMAGINE that when Adam was growing apples he found that the loosening of the soil and the destruction of the weeds, which must have come after the fall, were aided by the use of a crooked stick. For hundreds, even thousands of years after that the crooked stick with various modifications was the principal agricultural implement. It is possible that Abraham and Isaac and Jacob followed somewhat improved methods, though they trusted their flocks to turn the herbs of the field into food and raiment for them. It is probable that when Ruth gleaning in the fields, followed Boaz, he had provided himself with a sickle, and that sickle was used by reapers for thousands of years or until within the memory of many of the readers of the California Cultivator. Many of us recall the swinging of the cradle and even the cleaning up of fence corners with the old-time sickle. To be sure, the reaper was invented by Cyrus McCormick in 1831, but the cradle still held its place on many of the smaller farms until into the sixties. "Main strength and awkwardness" has been the rule in the production of the world's food until within a very few years. Today we are saying, "Let gas do it." And the rapidity with which we are improving upon power farming methods is astounding.

This was never shown more fully than at the great tractor demonstration just held in Los Angeles: Great in that there were perhaps 150,000 people attending; there were 120 tractors demonstrating the efficiency and economy of power farming; there were many hundreds of farm implements built especially for tractor farming; there were demonstrations of educational methods which make for more efficient work and greater production; one firm alone had in excess of $30,000 worth of farm implements on the ground. It was an event patriotic to the last degree, and every moment found something doing from the first on the opening morning until long after dark of the last day.

It was of course a time for doing business, or rather a great trade mart, in which the sales force of 60 tractor manufacturers and hundreds of implement manufacturers sold thousands of dollars worth of power and power farming implements. One firm alone took orders in the aggregate requiring well up towards five figures to express.

But these direct sales and the fact that some sales were made of machinery and implements to go to other lands is of lesser importance than the educational value of this demonstration. We believe the one lesson most strongly driven home was the education of the attendants in the necessity for the use of power and power implements. The labor shortage is so acute that the farmer is in a mental attitude to grasp to the fullest the lessons of such demonstration, and besides the tractor user was aided in securing greater power from less oil and less gas.

The Governor of California Spoke

An indoor snapshot taken during address of Governor Stephens. The governor was proud to be present at this, one of the greatest expositions of its kind. Such a demonstration adds to the real value of every California acre.

This Is Not a Sewing Machine

Young onions for transplanting in the Crawford planter are first placed in a "tape" or gummed between strips of tough paper. When a reel of this tape long enough to reach across the field is secured it is removed and placed in the planter. This machine is one of the most ingenious labor savers yet brought out.

William D. Stephens, governor of California, in center. O. H. Stevens president of the association at right.

Left to right: J. F. Griswold and W. L. Dixon, the firm of Dixon & Griswold, implement dealers, Los Angeles.

The Holt Company's demonstration force was large. This photo was taken when they were in conference in their big tent. From left to right J. A. Hymer, salesman; J. R. Graves, Los Angeles manager; G. M. Walker advertising manager; F. S. Moore salesman; Mrs. Lamont of the Los Angeles office; E. E Hergenhan field service; T. H. Luke sales manager; G. L. Dickenson for 25 years secretary of the company; Benjamin Holt, president; H. H. Eastwood, agent.

Stinson Tractor 18-36 hitched to Sanders 4-gang Extra Heavy Engine Plow, both distributed by Arnott & Co., Los Angeles. From left to right: Willard Arnott, president; M. D. Schatzman of Arnott & Co; Fred Stinson, inventor, and John de Brunynkops, factory general representive of Stinson Tractor; Pearl Bailey, driver.

The Killefer's entire force was on the field on the last day of the demonstration. They were good natured enough to pose for the Cultivator camera.

Agricultural News Notes of the Pacific Coast

Northern California

Cotton is now ready for picking on the red lands of Thermalito, Butte County.

New farm centers have been organized at Richfield and Dairyville, Tehama County.

Loggers are busy on the Feather River getting out pine logs for use in airplane manufacture.

Yolo County's hop harvest is well under way. Pickers are being paid $1.00 per hundred pounds.

All prune sections of the Sacramento Valley have been busy harvesting since about September 1.

Cotton in Butte County, growing on lands formerly planted to rice, is making unusually thrifty growth.

A new milk goat ranch with cheese factory is to be established at Berry Creek near Oroville, by B. C. McCallum.

The Alameda County farm bureau held its annual meeting and picnic at Fernbrook Park, Niles on September 7.

The Cloverdale farm center at its last meeting discussed exhibit at the county fair to be held at Santa Rosa, October 10-12.

Appraiser Grant of the federal land bank has been in Butte County for some time appraising lands upon which farm loans are asked.

The River Farms this year had 17,000 acres planted to wheat and barley in Yolo and Colusa Counties. It harvested 300,000 sacks of grain.

Grain growers of Northern California got together in Sacramento last week to discuss plans for forming a cooperative marketing association.

The California Bean Growers' Association and the Sacramento Northern Railroad have erected in Sacramento a warehouse of 200,000 sack capacity.

Serious damage to some grain, hay and drying fruits occurred because of freak storm which visited nearly all sections of the Sacramento Valley last Friday.

Word has been received in Sacramento that Secretary of the Interior Lane has authorized a cooperative survey of the great Iron Canyon irrigation project.

Glenn County's rice acreage is about 36,000, with prospect for good yield, running approximately 50 sacks per acre. Most of the fields are drained and will soon be ready for harvesters.

California Swine Breeders' Association proposes to go before the next state legislature and ask for a law which will require feed handlers to indicate the food value of a given proprietary feed.

Warm weather of the last month has been very favorable to the development of the rice crop. California's yield this year will be close to 4,000,000 sacks according to W. C. Davis of the Pacific Rice Growers' Association.

The California Almond Growers Exchange held a general meeting in San Francisco last week to fix minimum prices for the 1918 crop. The price is practically one-third in advance of that of last year.

A Chicago broker, inspecting California olive orchards and packing plants, said one reason for the popularity of California ripe olives has been the uniformity of pack. A few years ago it sounded different.

Central California

The market for Watsonville Bellefleurs is reported rather slow.

Watermelon and casaba growers of Turlock are pleased with returns for their crops.

Vineyardists of Livingston, Merced County, report receiving $32 a ton for wine grapes.

Stanislaus County held its second farm bureau hog auction sale at Tegner, September 18.

The wool pool of members of the Stanislaus County farm bureau has consigned to Boston market.

William Bernstein of Hanford has been reelected president of the State Poland-China Breeders' Association.

Members of the Beach Road farm center of Santa Cruz County have called for school boys to help harvest beans.

California's green fruit shipments this year have broken all records, being now 2000 cars ahead of last year same date.

During August over 1500 cows were tested in unit No. 1 of the cow testing department of the Stanislaus County farm bureau.

Sixty-five per cent of the dried peach output of the state has been secured for use of the army. This means about 13,000 tons.

Over 2000 sheep have been signed up in Stanislaus County by farmers who agree to keep them in small bands on their farms.

The railroad commission has authorized the Mt. Whitney Power and Electric Company to make a surcharge of ten per cent on all bills for electric service.

Grape growers are having a good season. Expenses have been high but prices are also good. Damage from the recent rain storm can not yet be accurately estimated.

The council of defense for California has ruled that every organization that may be asking donations for war relief must secure permit from that body before making solicitation.

Madera County farmers were guests of the Fresno County farm bureau on Wednesday, September 11. Over 100 visited some of the large vineyards and fig orchards of Fresno County.

Apple orchardists of the Watsonville district have secured a plentiful supply of labor from the mines of Amador and Tuolumne Counties. Pickers are being paid six cents a box.

Tulare County sent a delegation to the state highway commission urging the necessity for the completion of work already begun on the highway, and the feeling is general that permission will be granted to continue the work.

At the recent annual meeting in San Francisco of the California Associated Olive Growers Mr. Crighton of Corning was elected president; H. R. Bell of Orange Cove, vice president; Mr. Warner of Oroville, secretary. Picking of olives will begin about the first of October.

Serious damage was inflicted upon thousands of tons of drying prunes and other fruits in Santa Clara Valley by a rain storm last Friday and Saturday. In San Jose the downpour continued heavily for over 24 hours, approximately four and a half inches falling in that time.

Southern California

Westminster bean farmers are threshing this week.

The canning factory at Hueneme is running day and night on tomatoes.

Lima beans are beginning to come into the new warehouse at Hueneme.

The biggest tractor demonstration ever was staged in Los Angeles this week.

California will furnish 60,000,000 pounds of prunes to the army and navy.

Recent rains did practically no damage to bean sections of Southern California.

Cotton is nearly ready to pick in the Palo Verde section of Riverside County.

Local draft boards have been ordered to have selects ready for camps in 100 days.

Several of the bean growers of Chino Valley have joined together in the purchase of a thresher.

Ventura County reports her walnut harvest nearly a month late. Picking began last year August 20.

Directors of the California Lima Bean Growers' Association have set a price of 12 cents on Limas.

L. W. Wells of Somis, Ventura County, expects to secure 26,000 pounds of honey from his bees this season.

The Yucaipa Valley of San Bernardino County is picking apples. Its new packing house is ready to handle the crop.

The San Bernardino farm bureau is planning a big exhibit at the Southern California fair to be held in Riverside, October 8-12.

Threshing of beans is on in the Wintersburg district of Orange County following a two day let-up caused by damp weather.

A petition is being circulated for the formation of a drainage system southwest of Oxnard. This district contains 69,000 acres.

A suit to determine the right to use the waters of San Gabriel River above the canyon has been filed by ranchers of Duarte, Covina, and Azusa.

Blythe, Riverside County, has formed a broom corn association. Members hope to see a broom factory established at Blythe next season.

The Imperial County farm bureau is planning a drive for increased wheat production. Prices of barley and milo have taken a sudden drop.

San Dimas recently dedicated its new marmalade factory with a sort of "inaugural ball," the proceeds of which were used for French-Belgian relief.

Saticoy Walnut Growers' Association recently met in annual meeting and listened to reports of sales during the preceding year, amounting to $700,000.

The food administration has served notice on canners and tomato buyers that they must not purchase tomatoes which have been contracted to rival concerns.

The chamber of commerce of Chino, San Bernardino County, is calling attention to the fact that in this year of shortage of sugar her factory is lying idle, not a wheel is to be turned. It has made suggestion that one step toward correcting this siutation might be a bounty to the beet grower.

The Coast and General

Seeding of winter wheat has begun in Utah.

Oregon and Idaho are harvesting good crops of potatoes.

The Red Cross is conducting a campaign for used clothing.

Early sown wheat is already up in Umatilla County, Oregon.

The height of the apple picking season in the Hood River Valley.

Walla Walla County, Washington is caring for 161 French orphans.

Clean harvesting is the rule throughout the United States this year as never before.

A fruit growers' association at Riverside, Washington, is planning erection of a warehouse.

Arizona ranges are showing the need of rain, but stock is still showing fairly good condition.

Oregon sheep men grazing stock in the Ochoco National Park have organized a marketing association.

A war of extermination against coyotes will be waged this fall and winter in Jackson County, Oregon.

Hot weather has brought on Arizona cotton very rapidly, and aphis have disappeared from the Yuma district.

Great Britain has imported more that 8000 American tractors and has order placed for several thousand more.

Omaha, Kansas City and St. Louis were placed under a grain embargo last week because their full storage capacity had been reached.

Rail shipments of grain will be regulated jointly by the railroad and food administrations in order to prevent overloading at primary markets.

Owing to labor shortage in the shipyards of Washington business men will close their places of business on certain days and aid in the labor.

Nearly 100 alfalfa growers of Idaho recently met and fixed on a price of $17 a ton in stacks, first grade alfalfa hay. Sheep men of the state are protesting.

The state veterinarian of Oregon is conducting a sheep dipping campaign, serving notice that all sheep in certain counties must be dipped before October 15.

Heavy rains in Western Nevada last week interrupted threshing operations and damaged hay and grain to some extent, but put alfalfa and range pasture into excellent condition.

The peach season of the Northwest is very short and early this year. Last year Washington shipped 1920 cars, this year less than 650. Last year Oregon shipped 65 cars, this year seven.

Assurances have been received from Washington that at least ten vessels now being made available at Pacific Northwest shipyards will be utilized to move away Northwest grain and flour, in order to relieve the congestion in those commodities, which is becoming serious.

The federal government is preparing for securing cheap lands for returned soldiers, and to that end has appointed A. P. Davis, director general and chief engineer of the reclamation service, to have charge of the work. With him will be associated Elwood Mead, H. T. Corey and Frank W. Hanna.

War Gardens

By M. E. Bemis

IF "ONE who grows two ears of corn or makes two blades of grass grow where only one grew before deserves more of mankind than the whole race of politicians," how much more does one deserve who utilizes water that was running to waste to make hundreds of gardens where not one was known before, who makes gardeners of men who had much idle time, and indirectly makes happier, healthier, more prosperous and better contented thousands of people? Such is the achievement of the promoters and managers of the Inspiration War Gardens.

Such things can not be measured in commonplace terms of dollars, nor even in bushels and pounds of produce. I have seen women coming in from their gardens, their arms full of fresh vegetables, and I know that these could have been reckoned in money values, but the happy smiles on their faces with all that the smiles betoken can be figured nowhere except in the books the angels keep.

Where and what are the Inspiration War Gardens?

Out in the mountains of Gila County, Arizona, where the miners have dug deep into the earth in search of the much needed copper; where smelters send out dense clouds of sulphurous smoke that hang like clouds on the mountain tops, a white signal that unmistakably marks the mining town, there is a little valley on either side of a water course that, like most Arizona creeks, is dry the greater part of the year. Through the hills there winds a concrete road eight miles long. On either end of this roadway there are mining towns.

I am sorry that I don't know just who it was that thought of the big idea of the war gardens. At any rate the beginning was made shortly after that memorable day in April last year when Uncle Sam took over the job of "making the world safe for Democracy."

This season the acreage has been extended somewhat and many more gardens added. Now like most successful enterprises, there hasn't been much of accident about it. Everything has been carefully planned and the plans rigidly adhered to. Certain rules have been adopted and the gardeners have been obliged to follow them. There has been no haphazard, everybody-run-a-little - experiment - station-of-his-own work. In consequence the failures have been nil. The guiding spirit of the enterprise is J. R. Sandige, whose official title is "Agricultural Expert for Employees' Committee and County Agricultural Agent for Gila County, Arizona." His salary is paid party by the state agricultural extension service and partly by the Inspiration Consolidated Mining Company. Under his direction last year about 500 war gardens were laid out and about $30,000 worth of vegetables raised. The popularity of the gardens the first season induced the mining company to extend the acreage, and this season there are 650 gardens 100x50 feet or one-eighth of an acre each. In addition there are 105 smaller gardens for the school children and an area of 25 acres used by the Boy Scouts of both Miami and Globe.

The soil, like most of the small valleys, is of an alluvial type that is well adapted to gardening. The water is delivered from the pipe line at convenient places and then distributed by ditches with headgates and so arranged that each garden is alongside one of the main irrigation ditches. All seed, water, and land for the gardens is furnished free. The advice of the agricultural expert is also free, but the responsibility of the success of the war gardens as a whole is placed upon the gardeners themselves. An employes' committee is a sort of board of directors.

The amateur gardener (and it might be mentioned in passing that 70 per cent of the gardeners had never had any experience in gardening, or at least under irrigation) is not turned loose with a hoe and a seed catalog or a package of seeds from our congressman, as we poor ordnary mortals are. Of course we do not find on any bulletin boards any set of rules such as these, but some of us have had reason sometimes to wish that some of these rules could be enforced upon our neighbors:

* * *

These rules must be followed in order that the gardeners may obtain most from their gardens and in order to protect their products from being stolen.

If you let weeds grow for two weeks in your garden it will be understood that you do not want it and the garden will be issued to another.

If you cannot work your garden due to sickness, or other reasons, notify the gardening expert and he will hire some one to care for it until you are able to do so.

Do not flood or in any way disturb your neighbor's garden.

Do not bring dogs into the gardens.

Gathering vegetables from any garden but your own is absolutely prohibited. This means you are not to gather vegetables from your friend's or relative's garden.

No vegetables are to be taken from the gardens after dark.

If your vegtables are going to waste, and you do not gather them after being notified, they will be sold, and the money given to Red Cross.

Do not waste water or go away leaving the water turned on unless someone below you is irrigating.

* * *

Bulletin boards are placed around among the gardens where the gardener can hardly fail to find them, and he has but to read his instructions from time to time to know what to do without guesswork. Bulletin No. 7 is a fair sample of the brief but plain instructions that are given to the gardeners:

* * *

Plant all vegetables on ridges, which are made as follows: Mark off rows 2½ feet apart, throw up ridges from both sides so that the ditch will be where line was made; then level the ridges down until they are 17 inches wide on top.

Corn, pole and bunch beans should be planted three seeds, 1½ inches deep, in a hill. Hills should be two feet in rows two inches from the edge of the ridge. Plant so that the hills in the same ridge will be staggered, not opposite each other; then they will be one and a half feet apart. Thin corn to two stalks to a hill when one foot high.

Watermelons, Hubbard squashes and pumpkins should be planted eight seeds one and a half inches deep in a hill. Hills 7½x7½ feet apart. Thin to three plants when three inches high.

Muskmelons, scalloped squash, cucumbers, and roselle should be planted ten seeds one inch deep, in a hill. Hills 5x5 feet apart. Thin plants to four in a hill when three inches high.

Cabbage and peppers should be set two feet apart in rows three inches from the edge of the ridge. Alternate them like the hills of corn and beans.

Tomatoes and eggplant should be set two and a half feet apart in rows four inches from the edge of the ridge. Alternate them like the cabbage and peppers.

To transplant vegetables, daub the roots with mud before setting in place.

Ants can be killed by putting a tablespoon of London Purple around their hill once a week.

* * *

The gardener has to obtain his supply of seeds of the gardening expert and of course gets only the seeds that should be planted at that particular season. In making the rows uniform in distance apart, there is provision for planting in succession, and so the ground is kept occupied and something growing constantly during the entire growing season, which in the vicinity of Miami is up to about October 20. Some things are planted that take a season to mature among things that requre but a few weeks, for example tomatoes and cabbages are set among beets, carrots and radishes, so that when the latter are off the ground the tomatoes and cabbage will have the room required.

It happens sometimes that some gardener has a surplus of vegetables and he has a choice of two ways of disposing of the surplus. War garden markets are established where surplus vegetables are sold to those who do not care to make a garden and the proceeds are turned back to the gardener without cost to him.

The other method of disposing of the surplus is through the war garden canning kitchen, which is located near the office of the inspiration war gardens. The state agricultural extension service placed Miss Florence Dunbar in charge of home demonstration work in Gila County, and under her direction the war garden canning kitchen was established and here the smiling women bring the beans and tomatoes and corn that they cannot use and furnish the cans. The soulless corporation furnishes the fuel and hires the help to can the produce and hands it back to the grower in cans ready for use next winter. Miss Dunbar is ever ready to give information to housewives about home economics as well as canning, and I have little doubt but that many of those homes on hillsides are housing happier, healthier families because of the instruction, direct and indirect, which has been given the wives of the miners. Right here it may be permissible to diverge for just a moment to say that working together as these two young people have in helping others to make better homes, what should be more natural than that they too should become "inspired" with the home making spirit and decide to work together for the rest of their lives; so there was a wedding not long ago and Miss Dunbar is writing her name Mrs. Sandige now. Few young people have ever started out with the best wishes of as many gardeners as have Mr. and Mrs. Sandige.

A story usually ends with the wedding, but this is not a romance, just a war garden tale, and I am quite sure that young Sandige would not consider it complete without some reference to the value of the products gathered. From March 1 to July 10 of this year there had been gathered from these 650 gardens $27,855 worth of produce, and it is expected that

The Right Work at the Right Time
One of the 50 bulletin boards and some of the gardens shortly after planting.

The War Garden Market
This market has sold as high as $73 worth of produce in a single day. It is said that the price of vegetables to the consumer in the district was reduced from ten per cent to 45 per cent within seven days after this market was opened.

Farmers Say It Costs Less to Operate the Plow Man

The real test of a tractor is the cost to keep it up. All-round economy means smooth operation and sound, solid construction—also saves the farmer money on every acre he works.

Wherever the Plow Man is used farmers vouch for its power, easy operation, successful use of kerosene and a very low upkeep expense. All of which has been proven by actual farm use in America, Canada and Europe.

Our special unit power plant construction conserves power for actual work and protects important parts from all dust and dirt

Plow Man Furnishes Power for Many Jobs

In the field they use it for plowing, listing, discing, smoothing, rolling, crushing clods and seeding.

For harvest work they do mowing, hay loading, reaping and binding, and corn cutting.

The belt work required includes threshing, silo filling, hay baling, well drilling, feed grinding, wood sawing, rock crushing, pumping, shelling, etc.

For road work the Plow Man is used in hauling, grading, leveling, scraping and dragging.

Other uses are hauling manure spreaders, pulling stumps, moving buildings, stretching wire fence, etc.

When our tractor is used for general field and belt work, it soon pays for itself in the saving over horses and by requiring less labor.

All-Standard Construction

Plow Man Buda 4-cylinder motor for heavy duty service. Bore 4¼-in., stroke 5½-in.
Foote Transmission delivers the power without waste.
Hyatt Roller Bearings reduce friction and save power.
Quick constant cooling with Perfex Radiator.
Bennett Producer Carburetor makes success of kerosene as fuel.
High Tension Magneto, Impulse Starter, one-fourth turn starts tractor.
Pivoted Front Axle provides flexibility for rough land.
Automobile Type Control. Easy to handle.
Trouble-proof French and Hecht Wheels.
Light weight—apporximately 4,400 pounds.
Dimensions—Height 5 feet 9 inches, width 5 feet 6 inches, length 13 feet, wheelbase 8 feet 3 inches.

Agents and Distributors Wanted

Having demonstrated the Plow Man Tractor at the Los Angeles Demonstration, thoroughly fulfilling every advance notice given and promise made by us and the Interstate Factory, we are ready to make contracts in unoccupied territory throughout California.

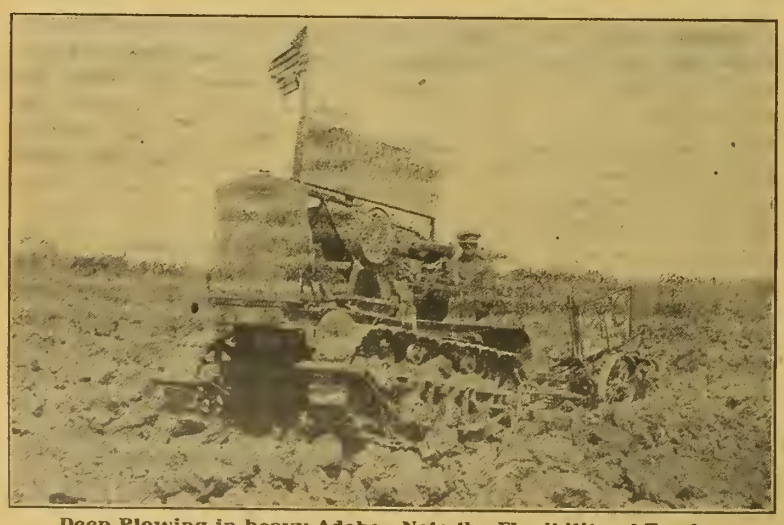
Monarch Neverslip Tractor



Deep Plowing in heavy Adobe. Note the Flexibility of Tracks.

Manganese Steel Tracks Car Journal Bearings Easy to Handle Economical in Operation

The Monarch tractor is offered at prices much lower than is asked for other makes of equal capacity and the construction is such as to reduce the cost of upkeep to a minimum. Read what Charles E. Guest at Calipatria, Imperial County, has to say regarding it.

W. L. Cleveland Co., 211 No. Los Angeles Street, Los Angeles. Calipatria, Cal., September 1, 1918.

Gentlemen—Yours received. Will say in answer as to how my tractor is running and what I think of it is, that I am satisfied and well pleased with it. The Monarch has ample power and seems to be holding up well. I am pulling a Holt 5 Disc Plow, six inches deep with it, and it is no load, while the ground plows hard. I am running two shifts every day and have not been held up at all on account of the engine.

I don't think any one could go wrong by getting a Monarch; I have run mine three months and it has not shown any signs of weakness or wear and is economical to operate. Yours truly, C. E. Guest.

Made in three sizes, 6-10, 12-20 and the 18-30 are now in stock for immediate delivery. Send for printed matter regarding the Monarch.

Winter Cover Crop

Written for California Cultivator By D. J. Whitney

THERE are certain things in farming which are supposed to be the right thing to do, but just the same they do not work out well in ordinary practice. Winter cover crops in Tulare County orange orchards seem to be of that nature, particularly on heavy soils and it would be a valuable thing at this time of the year when a person should be planning for a cover crop, if he is going to have one, if some citrus expert from the Riverside experiment station, or some one else, would explain just how a man could gain the advantages of a good cover crop without experiencing the disadvantages, which now are very serious.

Everybody is supposed to know that most California soils are short of humus and that humus forming material is of big value, so that if a good cover crop could be turned under and made part of the soil it would be an immense help to the trees; it would promote better tilth, improve irrigation and be of service in every way. Next, good cover crops of the clover type, such as peas, vetch and melilotus, add immense amounts of nitrogen to the soil, which is the most expensive and valuable plant food known. Thus, the advantages of a cover crop are big; provided they can be secured, but common practice on the typical orange soils of Central California shows that they are more trouble than good, that the orchards are actually hurt by winter cover cropping. Even natural growth is discouraged as much as possible, so that it is a saying that one good day's cultivation in mid-winter, with the ground in proper shape, is worth a week's cultivation in spring—it kills so many weeds.

On light, well drained soil a person can get on the ground to plow soon after a rain and usually will have no difficulty in getting the vegetation under at the proper time and his ground in good shape before blossoming time. On the heavy soils common here in citrus orchards growth is terribly rank in fairly moist winter, and the ground stays wet until the growth is so heavy that it is hard to do anything with it and until so late in spring that there usually is no great amount of time to spare for cultivation, even if there were no cover crop. If a man has stock and tools for say 40 acres, the work is so hard in getting a heavy cover crop under that only ten acres may be attended to at all well, and on the rest of the place the ground will not be right for plowing after the ten acres are plowed.

In plain, actual fact, on typical orange land in a typical spring after a typical winter a man with a big cover crop cannot get his ground in shape until toward fall. Until that time his soil is cloddy and mixed with dry stems of what has grown and his trees are yellow and unthrifty. He adds in theory a lot of nitrogen and humus, but in fact he makes a lot of trouble that is too much for him, his soil is in bad shape and his trees still worse. The main question in cover crop raising is not what will make the best growth or add the most nitrogen, but what can be grown without doing twice as much harm as good. Another way of putting it would be: how can a cover crop be turned under early enough in the spring and in good condition so that proper cultivation and irrigation can be given? This is not a question for loam soils, but for the standard types of heavy soils with a good deal of sticky clay in them. The benefits of nitrogen and humus are so great that a suitable answer to this question would do an immense amount of good.

Last fall a vineyardist planted a furrow of sour clover (melilotus) down the center of each row of his vineyard. It made an immense growth and ought to have done a lot of good to the soil, as it probably did. This was a loamy soil and the practice might not work out well in orange orchards, but it occurred to the writer that two furrows like this down each tree row, or one furow where trees were large and close together, would do lots of good in supplying humus and nitrogen and yet be easily plowed under. Whatever system could be profitably used ought certainly be described by those who ought to know and who most strenuously urge cover crops.

Aids Marketing of American-Egyptian Cotton

INCREASED prices being paid for American-Egyptian cotton grown in irrigated valleys of the Southwest, an industry fostered by the United States department of agriculture, with the amount of cotton ginned during the 1917-1918 season, are shown in reports of investigations and surveys by the bureau of markets of the department.

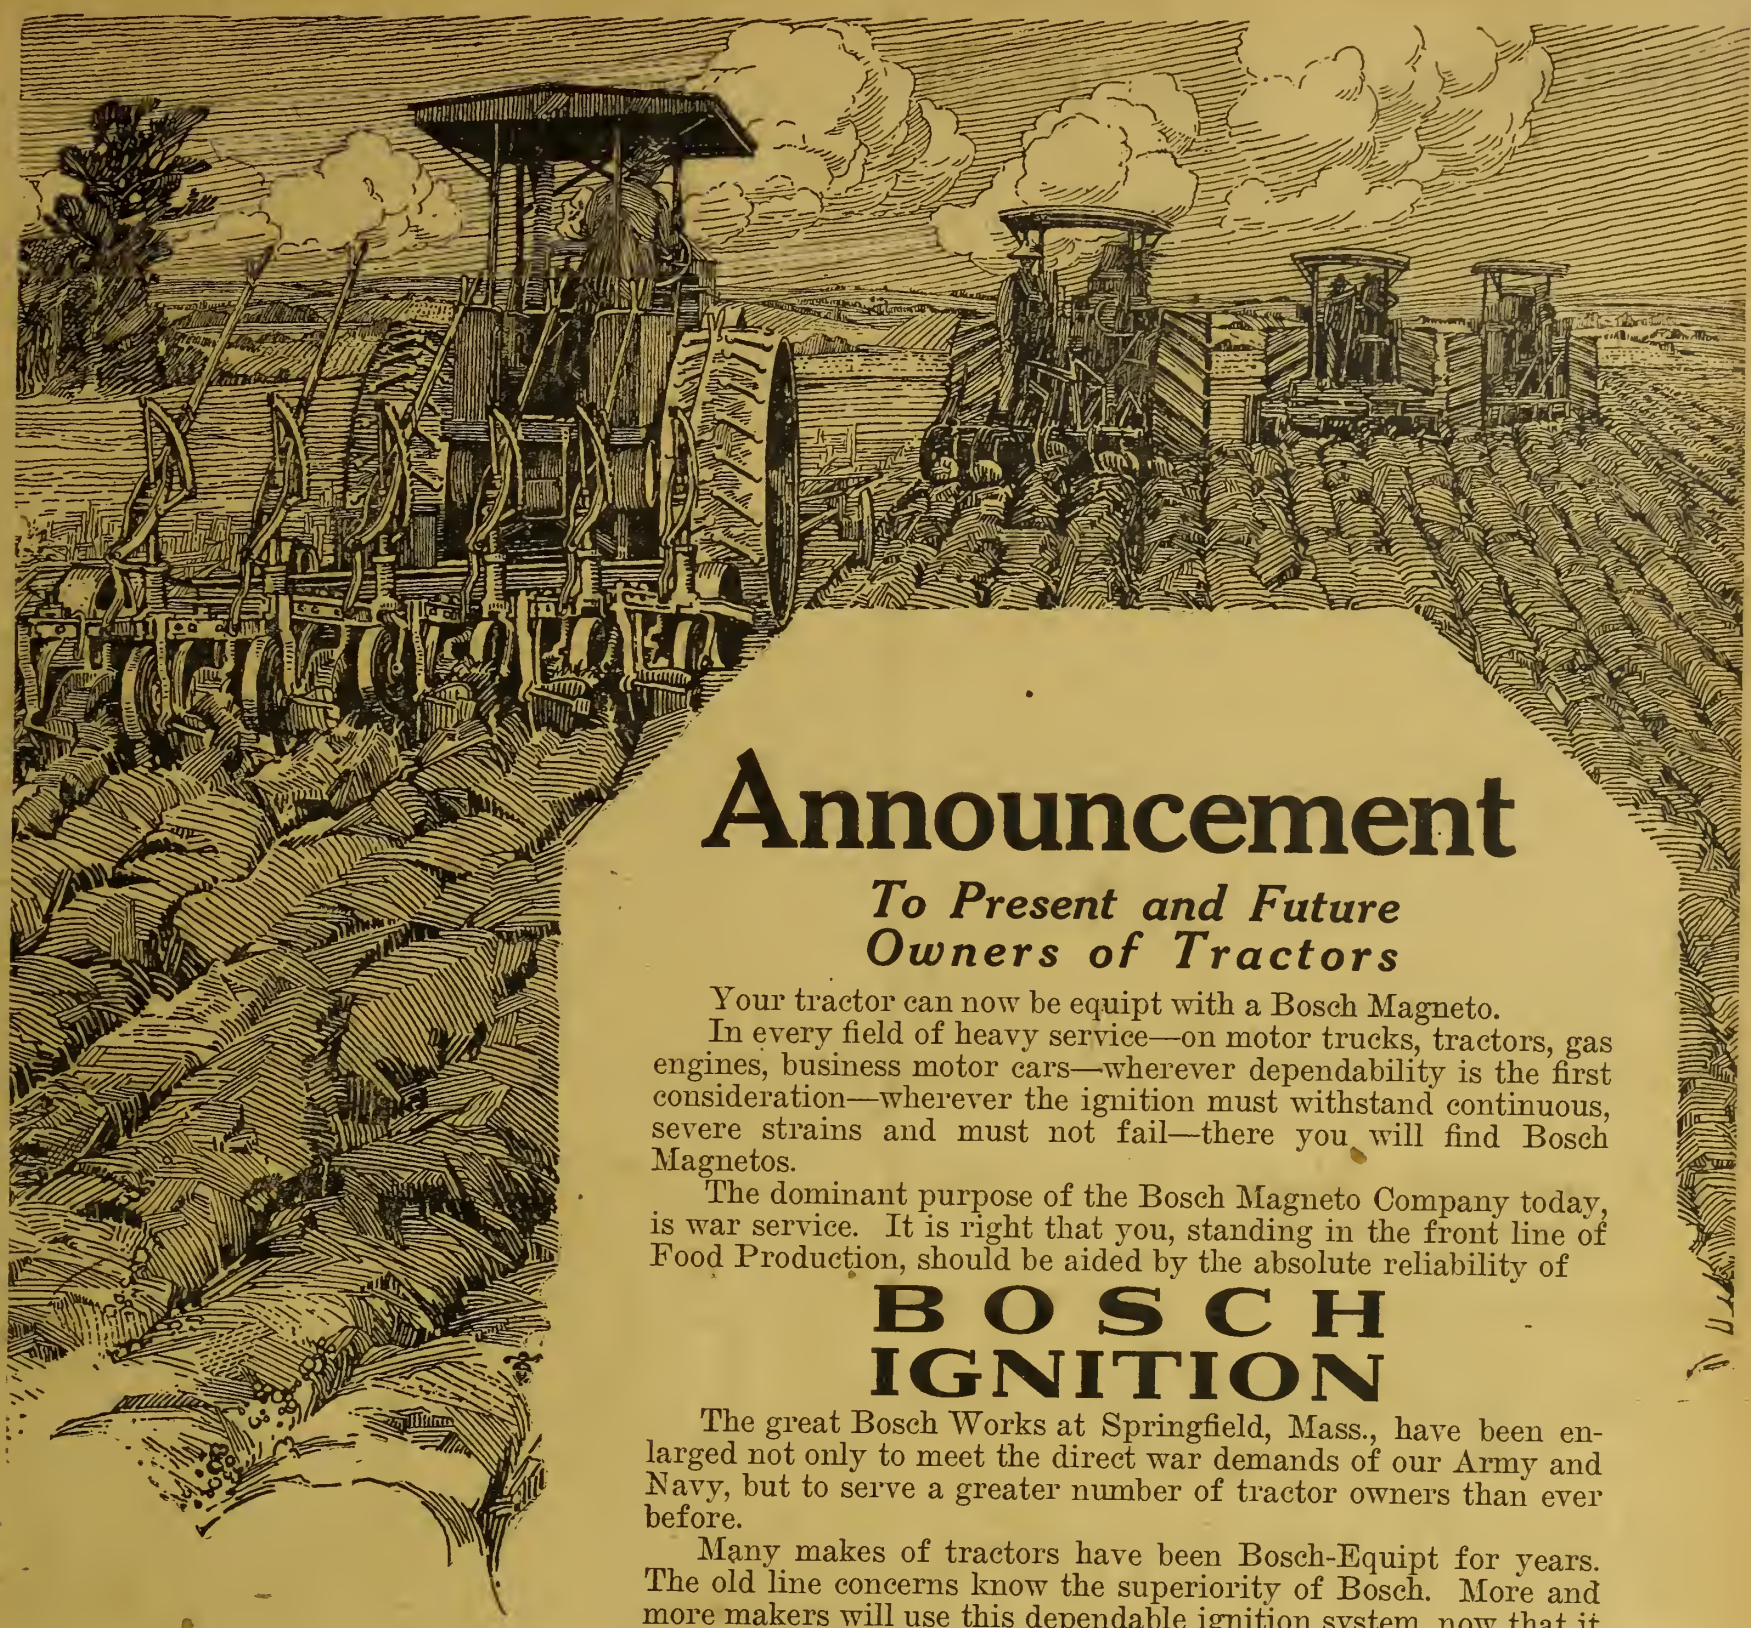
Of the favored Pima variety which has largely superseded the original Yuma because it is more prolific, matures earlier and has fiber about one-eighth inch longer, 5,108,553 pounds of seed cotton were ginned at Tempe, Arizona. Prices for the 1,368,822 pounds of lint obtained ranged from 60 cents a pound in a few cases to 80¼ cents in many. At Winterhaven in this state 3,097,236 pounds of Yuma seed cotton were ginned.

Following are summarized reports of the bureau of markets on gins handling the American-Egyptian cotton:

During the season of 1917-1918 there was ginned at the gin of the Tempe Cotton Exchange, Tempe, Arizona, a total of 3,778,680 pounds of seed cotton of the Pima variety, giving a total net weight of lint of 1,001,024 pounds. The lint outturn of the above cotton was 26.48 per cent. The total number of bales ginned was 2112, the average net weight being 463 pounds per bale. The grades and staple lengths were as follows: Grades; No. 1, or fancy, No. 2 or extra, No. 3, or choice, No. 4 or standard, No. 5 or medium, below medium. Staples; 1 11/16-1¾, 61 per cent; 1⅝-1 11/16, 37 per cent; 1½-1 9/16, two per cent.

The average monthly price for cotton ginned at the above plant was as follows: October, 71.37; November, 78.00; December, 74.72; January, no sales; February, 68.00; March, 69.20; April, 72.55; May, 74.07. The lowest price was 60 cents and the highest 80¼ cents; only ten bales being sold at the low and 114 at the high.

The public gin at Tempe, Arizona, ginned both the Pima and the Yuma



Announcement

To Present and Future Owners of Tractors

Your tractor can now be equipt with a Bosch Magneto.

In every field of heavy service—on motor trucks, tractors, gas engines, business motor cars—wherever dependability is the first consideration—wherever the ignition must withstand continuous, severe strains and must not fail—there you will find Bosch Magnetos.

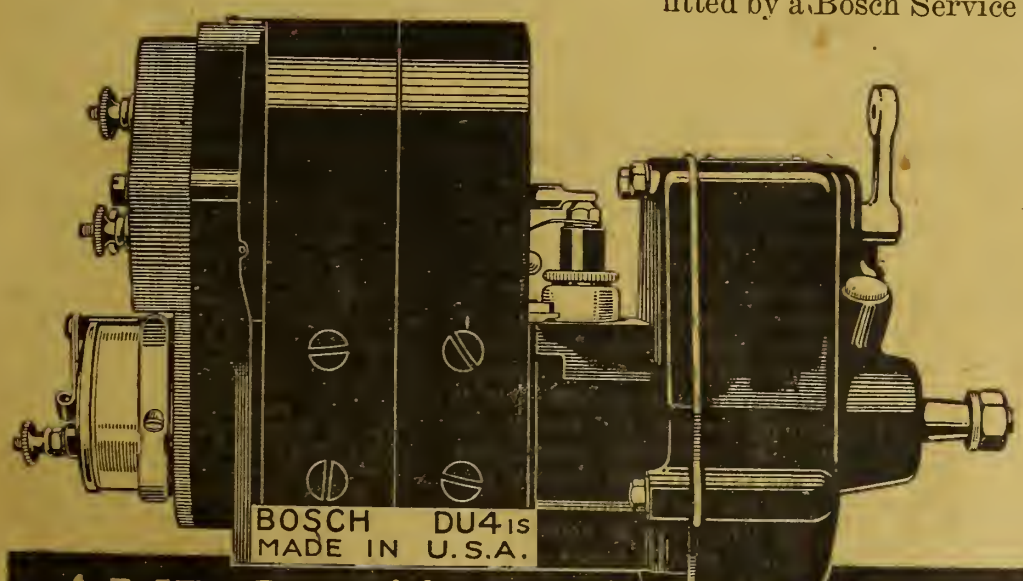
The dominant purpose of the Bosch Magneto Company today, is war service. It is right that you, standing in the front line of Food Production, should be aided by the absolute reliability of

BOSCH IGNITION

The great Bosch Works at Springfield, Mass., have been enlarged not only to meet the direct war demands of our Army and Navy, but to serve a greater number of tractor owners than ever before.

Many makes of tractors have been Bosch-Equipt for years. The old line concerns know the superiority of Bosch. More and more makers will use this dependable ignition system, now that it can be had in quantities for early delivery.

But don't leave it entirely to the manufacturer. Other men may design, build and sell your tractor, but *you* are the one who will use it. You are the one who must make sure that you never will be held up by ignition trouble. You *will* make sure of absolute reliability when you specify on your order *"Bosch Magneto Ignition."* Or, for your present tractor, have a Bosch Magneto fitted by a Bosch Service Man.



There's a Bosch Service Station in every State. Write there or to us for any Ignition information.

BOSCH MAGNETO COMPANY

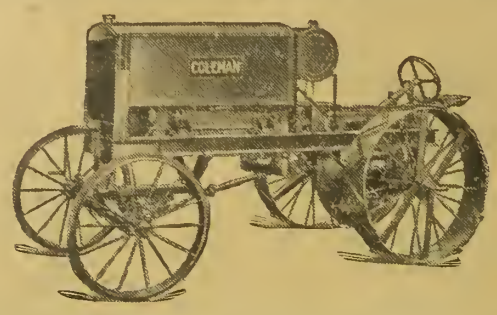
The Coleman Tractor 16-30



We were unable to show at recent demonstration on account of freight conditions and Tractors not arriving in time.

The Coleman Tractor

The Coleman Tractor is the sensible Tractor, the answer to the nation wide demand for a Tractor less complicated with fewer parts, easier to operate, lower fuel consumption. Having fewer parts the COLEMAN is less likely to need repairs or adjustment. All parts within easy reach, easy to get to, and easy to keep in perfect running order.

WORM DRIVE—the correct principle of efficient power transmission, running in a bath of oil, all moving parts enclosed, positively dust proof. THE WORM DRIVE MECHANISM IS POSITIVELY GUARANTEED FOR WORKING LIFE OF THE TRACTOR. This is the strongest guarantee ever issued by any tractor manufacturer.

THE COLEMAN TRACTOR contains the famous CLIMAX MOTOR 600 to 800 R. P. M. full force—feed oiling system; over-sized bearings throughout. TIMKEN & HYATT bearings throughout. TRANSMISSION FORWARD REVERSE BELT controlled by one lever. No intermediate gears. Final drive direct from engine through WORM and WORM GEARS.

THE COLEMAN TRACTOR is as easily driven as an automobile and turns in an 8-foot 6-inch radius and can be handled by any boy or woman. It has foot pedals for the brake and clutch and the control lever governs the forward reverse speed and when you consider durability, efficiency and economy THE COLEMAN TRACTOR is, indeed, the ideal tractor for the rancher and orchardist.

varieties. A total of 1,329,873 pounds of seed cotton of the Pima variety was ginned, giving a total net weight of lint of 367,798 pounds. The lint out turn of the above cotton was 27.66 per cent. The total number of bales ginned was 722, the average net weight being 487 pounds per bale. The grades and staple length were as follows: Grades; No. 1 or fancy, eight per cent; No. 2 or extra, 62 per cent; No. 3 or choice, 22 per cent; No. 4 or standard, five per cent; No. 5 or medium, three perecent. Staples; 1 11/16-1¾, 62 per cent; 1⅝-1 11/16, 37 per cent; 1½-1⅝, one per cent.

The average monthly price for cotton ginned at the above plant was as follows: October, 71.58; November, 78.83; December, 73.04; January, no sales; February, no sales; March, 71.35; April, 72.70.

The lowest price was 62 cents and the highest was 80¼ cents; only two bales being sold at the low and 111 at the high.

At Winterhaven, the Winterhaven Egyptian Cotton Exchange ginned the Yuma variety only and for the entire season ginned a total of 3,097,236 pounds of seed cotton, giving a total net weight of lint of 848,487 pounds. The lint outturn was 27.39 per cent. The total number of bales ginned was 1757, the average net weight being 460 pounds per bale. The grades and staple lengths were as follows: Grades (Yuma); No. 1 or fancy, four per cent; No. 2 or extra, 31 per cent; No. 3 or choice, 40 per cent; No. 4 or standard, 18 per cent; No. 5 or medium, six per cent; No. — below medium, one per cent. Staple lengths (Yuma); 1 7/16-1½, 84 per cent; 1⅜-1 7/16, 15 per cent; 1¼-1 5/16, one per cent.

About 50 bales were sold early in the season for 73 cents. The bulk of the cotton, however, was unsold at the time this survey was completed.

The public gin at Tempe has cooperated with the department of agriculture and with the assistance of the department has had supervision of distributing the new Pima seed.

Bureau representatives who were present at the principal marketing centers during the ginning season continued their studies of the standardization of the Pima variety. During the season a large proportion of the crop was graded and stapled. In addition to data relating to standardization of grade and staple, information has been obtained as to the capacity of the various gins, the percentage of lint and seed yield, the grade and staple, and selling prices. These facts may be compiled later in bulletin form.

WAR GARDENS

Continued from Page 301

the season's crop will go over $50,000.

Is it worth while? From a monetary standpoint it is a big thing for the miners. Fifty thousand dollars divided among 650 families is no small saving. From a monetary standpoint I am inclined to think it has paid the Inspiration Copper Company, and paid them well. I doubt if any county agricultural and home demonstration agents anywhere have been able to accomplish more in the way of producing and conserving garden products, and so it has most certainly paid the state and the government.

In the larger way of better homes and better health of better men and women, and wiser boys and girls, of mining troubles averted, of men that might have become I. W. W.'s if they had not been too busy and too prosperous to listen to propaganda that is fed to men with too much idle time—of these things that cannot be weighed on the kind of scales that we use or estimated in dollars and cents, we may not know until we read the balance sheet taken from the books that the angels keep.

MORE POWER, MORE FOOD

Continued from Page 299

Occasionally the spectacular cropped out; the tractor girl in khaki uniform was prominent, and some tractor owners were putting their machines through paces intended to show extreme possibilities rather than efficient workaday service, and once or twice we saw demonstration of lack of understanding of the limits of the machine, but in the main straightaway hard work was demonstrated by thoroughgoing experts in tractioneering.

These latter demonstrations taught many a farmer operator how to secure more power from less oil and less gas. Of course there were lectures on efficiency and on tractioneering in general. The Automotive School, while not in actual operation, maintained during the demonstration headquarters at which tractor parts and charts, drawings and designs were exhibited and explained.

One feature which made the demonstration most valuable was the nature of the soil. It was of adobe, and in some sections so extremely hard that when plowed up with the big moldboard the surface seemed almost vitrified by the friction. In fact, the polish put upon some of the great clods thrown up, in connection with the black color of the soil, gave the impression from a short distance that the ground was glistening with moisture.

The big 75's with powerful gangs of either disks or moldboards majestically went across the field, throwing up clods almost as large as a man, and with apparent ease, but we doubt not records will show they ate up the gas.

But the little orchard types never flinched at the soil conditions and handled their one or two bottoms more easily and with better understanding than has been the case at any former demonstration.

Not once during this demonstration did we hear the expression, "light draft." We recall some years ago that nearly every advertiser of farm implements laid stress upon the fact that his particular line of goods was "lighter draft" than any other on the market. We also recall the time when one firm—we believe it was the Killefer people—began the manufacture of orchard implements which would stand up under any service. They took the ground that effective work called for effective tools, and if two California bronchos were not sufficient to handle the implements which would do the work, they should be replaced and heavier horses and more of them secured.

And that lesson of some years ago was more strongly reenforced at this demonstration. Strongly built implements with plenty of power are necessary for greatest production and more food.

There were practically a half dozen tractors never before seen at a Coast demonstration. Some of the Eastern manufacturers have understood that Coast conditions were "different" and have made no endeavor to supply this state. Others have sent their engineers, learned California's demands and are now preparing to meet our conditions.

But the money! There's the rub. Modern implements and power in war times cause the farmer raising crops, even at present prices, to stop and hold his breath. But a bit of cold-blooded figuring soon convinces the man who has conditions which permit of fullest use, either on his own place or in the neighborhood, that if the money is available or can be secured there is a possibility of "getting by" with the investment.

This brings us to another feature of improved implement farming brought out during this demonstration. That is the financial side, or the handling of tractor paper which enables the dealer to dispose of his wares on partial payment plan. These plans are not fully perfected, however, for we believe the cost to the farmer is too high. Eight per cent interest with a

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Uniformity is another word for economy and safety. When the same things happen with each pound of Giant Farm Powder, you know not only how much to use, but what results to expect and how to handle the explosive.

Giant Farm Powders are surer, safer and more economical because our tests guarantee every pound. We maintain our own completely equipped chemical division to inspect Giant Farm Powders during every process of manufacture. Absolute uniformity means absolute dependability. Like results always obtained under like conditions make western farmers prefer Giant Farm Powders.

"Giant Powder is the most satisfactory," says John Zurr, Santa Rosa, Cal. "I account for this because Giant Powder is made with the utmost care."

Caution: Be sure you get the genuine. That other explosives are often called "Giant Powder" indicates the high quality of the original. Look for the Giant trade-mark on every case.

The coupon (or a postal mentioning this paper) will bring you the big book "Better Farming." Tells how to remove stumps, prepare tree beds, and do all kinds of farm work cheaper and better. Write for it now.

Garden Tractors

Written for California Cultivator By Ernest Braunton

WHILE at the tractor show on Wilshire Boulevard, Los Angeles, last week I saw a garden tractor. We need a small garden tractor like this one very badly, but it does not seem to be perfected as yet. One strong point for garden use is the fact that its plow is ahead or in front of all else and in plain sight of the operator. Such an arrangement is absolutely necessary for work close to plants. There is no doubt that small garden tractors will soon be on the market at such moderate prices that every householder may afford one. Even at present price of the smallest effective machine, less than $100, two or more neighboring lot owners could afford to cooperate in the purchase of one for joint use.

Native Wild Flowers

The season is ripe for the preparation of a bed for native California wild flowers. That they be not hampered by weeds it is better to wet the soil and start the weeds first. After you are satisfied that all weed seeds in the soil have sprouted the soil may be hoed or spaded to kill the weeds and the flower seeds sown broadcast. This method is an easy one and fairly well relieves one of the task of weeding. All who have once grown native wild flowers in this manner are strongly in favor of continuance. We may all profit in knowledge by a closer acquaintance with the wild flowers of our own state and it is a duty we owe our children to see that they have a closer communion with them than has fallen to our lot.

Matilija Poppies

Those growing Malitija poppies where no water reached them during summer may cut them down to the ground. You may be just as savage with them as you please, they cannot be harmed. Usually I take a saw and cut them off just at surface of soil. Sometimes I hoe them off, cut them off with a shovel, even break them down with my feet by a good vigorous treading, and then pull the old stems away. I could discern no difference in quality or quantity of flowers or vigor or other growth effects. The one thing sought is to completely remove the old top. You will no doubt do it with the pruning shears, but that is the slowest method. After tops are removed you may water them to start growth or leave that task for the rains. The plants need no fertilizer, and if any be given it should be a very light feed indeed. If of stable manure it should be well decayed.

Treating Native Trees

Native trees, of which live oaks are a good example, may now be watered to start the season's growth, if they have gone unwatered throughout the summer. Such a procedure will insure a long season's growth. It is now the best time of all the year to transplant them, especially if this is done without removal of soil, for now they are most nearly dormant. I have removed trees of live oak from their place in the wilds where they had grown for 20 years and were four or five inches through the trunk. Prepare your tree hole in advance, both wide and deep. Dig out all the roots with the tree that you can get. Do not injure them and do not let them get dry. I put wet hay or sacks on the bottom of the vehicle and cover with the same material. Water immediately after planting. Cover tops if you can and even denude them of foliage after a few days if you can spare the time to pull leaves off.

Treating Rose Bushes

The cool days of autumn have now come, which dictates that rose bushes should not be severely pruned now except they are in very warm locations. The first of September is the best time for removing all the tops. Each year I prune mine a little earlier and find summer-dormant bushes should not be "slaughtered" later than stated. Small weakly wood may be removed now, whether or not bushes have been summer-rested. Young bushes set out last year should not be pruned this year. It is better to allow all young bushes to make unrestricted growth during the first season at least for you get them a heavy top from which to choose a good framework. In fact, the older the bush the greater the need of pruning, especially of severe pruning. Young bushes are generally pruned too much; old bushes not enough. It requires more courage to prune a favorite rose bush than it does to face a burglar.

Fundamentals and Incidentals

Do not found your garden on incidentals except for commercial reasons. The farmework of the garden should be shrubs of a permanent nature. Cannas, dahlias, and all herbaceous plants are, by their very nature, but incidentals. They do not remain intact throughout the year and therefore cannot give a garden character. I have seen gardens, and even small public parks, where during the summer tall cannas were the dominating growth. Such arrangement is open to most severe condemnation and shows a lack of taste and appreciation of plants. When making a garden build a permanent structure, one that will stand, even as you would build a house. Let the seasonal plants fill in odd places and be mere incidentals to the garden structure proper.

Lippia Canescens

We have nothing yet that will take the place of lippia, it has stood the test of years. As a drouth resistant ground cover, one that may be indiscriminatingly run over and misused, mistreated, and downtrodden generally, "it is a hummer." Like the shamrock in the song "Wearing o' the Green" it will take root again in spite of great abuse. It may safely be used anywhere for it is easy to get rid of, never becoming a pest in field or garden. It is, however, injured by heavy frosts, though seldom killed. Let us use it more freely than ever before.

The Smaller Fruits

We do not pay enough attention to the smaller sub-tropical fruits. We all like to grow blackberries, gooseberries, currants, etc., but ignore guavas, eugenias, carissas, etc., that are fully twice as large. People of today seem less tolerant of the small fruits than the last generation. Some of these we can scarcely do without as there are no good substitutes. We cannot dismiss the strawberry. But in the introduction of new fruits we set the standard in size by the apple, pear, and peach. Therefore avocados are favored by all, and justly so, but there are small and little known fruits that are just as luscious and of good food value. I feel sure that eugenias and other members of the myrtle fam-

ily are destined soon to play a bigger part in our food suply.

Limes for Home Use

For several years I have grown both lemons and the Tahiti seedless lime and have no hesitancy in saying I much prefer the latter for home use. The lime has a richer flavor than any lemon, is seedless and almost rindless. The skin is as thin as paper and as full of juice as any fruit known. In fact, when fully ripe it amounts to a sac of lime juice only, for the waste pulp is indeed of small amount. The bush or dwarf tree is quite ornamental and the foliage much more so than that of the orange or lemon. The Tahiti seedless lime is, however, more susceptible to frost damage than the lemon and this fact will restrict its use to the warmer locations.

Use More Palm Leaves

More and more each year I come to view with favor palm thatched seat covers, arbors, garden houses, etc. The only objection to their use is danger of destruction by fire. Where this is not of consequence, where plants would not thereby be destroyed or the fire communicated to other buildings or other inflammable material, palm-thatched roofs are a source of comfort and convenience. They may easily be made proof against rains, for I have one of this sort and the roof is less than "half-pitch." The method pursued is to use plenty of leaves and place them as carefully as you would shingles or shakes.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Southwest Museum

Please tell me something about the Southwest Museum. Is it open to the public? If so, what days and admission charge?—Subscriber, Long Beach.

The Southwest Museum is one of the representative institutions of Los Angeles which every visitor of the city should see. It occupies one of the most prominent hills midway between Los Angeles and Pasadena on the old main electric line along Pasadena Avenue. It was founded that things having to do with customs and the history of the Southwest might be preserved. It is open every day in the year from 12 to 5 o'clock. No admission charge is made.

Nematodes on Beans

I send Lima beans affected with little knots all over the roots. What is the trouble and how may I prevent it? —Subscriber.

This is only an extreme case of nematodes. With an ordinary vest pocket magnifier one may see the tiny pearl-like bodies of females of the nematodes. This is a serious pest, especially serious because of the fact that there is no cure for plants now infested. The only way of getting rid of the pest is by starving it to death by planting the ground to crops which are immune to the insect's attacks, such crops, for example, as barley, wheat, alfalfa, sweet potatoes, onions, radishes, snap beans, lettuce, cabbage (to a limited extent). Some other crops are partially immune. After a year or two of planting to such crops the soil is partially freed from the pests. Plowing in midsummer and throwing up the soil to the direct rays of the sun is also beneficial. When the soil in a green house becomes affected it is sterilized by the use of formaldehyde or steam heat.

Fleas on Rabbits

My rabbits have fleas around eyes, ears and nose. Chickens also have them.—Subscriber, Winchester.

Hold rabbit over paper and rub fur with buhach powder, and the fleas will drop off and can be burned. You also can dip a cloth in kerosene and wipe fur gently. Put kerosene or disinfectants in hutches, not in nest, and on hutch supports, also ground around hutches. Put new bedding in hutch boxes. The sticktight flea attaches itself to the comb, ears, eyes of animals, especially chickens, burying its head in the flesh. There are flea salves sold by poultry dealers that will remove these. Use according to directions on each lot. Thoroughly disinfect premises. We suggest keeping rabbit hutches separate from chicken houses.—W. L. W.

Garden Questions

Please name some plants, annual and perennial, also shrubs (both large and small) that are particularly adapted to a hot, sunny situation on south side of house. Of the shrubs especially, please give briefly name, description, kind of flower or fruit, size and characteristics of plant, height, care. I want evergreens especially, don't care so much for deciduous plants.

I have several different kinds of fuchsias in a southeast corner. Do well in spring, but now look very shabby. I never water anything near as much as most people do. Do you think it gets too hot and sunny for them there? Could I cut them down now, or any other time, and have them come on again all right? If so, when is best time to cut them, and how much can they be cut?

Please name two or three especially good climbing roses for an east porch. —Subscriber.

Our space limitations preclude answering such questions fully. Such lists have often appeared in the Cultivator. The up-to-date nursery catalog gives the precise information asked for. The best alternative is to look about in your own town, note what plants you admire in the various gardens, and procure them for yours.

Fuchsias may be cut down to any size, but it is best done in March after frosts are past and at the time the

"I Bought That Truck with Dynamite"

"I need it too, I can tell you. I'm getting more fruit this year than my horses could ever move to market.

"Why do I say I bought it with dynamite? Because if it hadn't been for Hercules Dynamite I never would have had the money to buy it. I wouldn't have needed it anyway because I wouldn't have had the fruit to haul I have now.

HERCULES DYNAMITE

is responsible for my bumper crops. To begin with I plant the trees in blasted holes instead of spade-dug holes. As a result my trees bear a year earlier than they ordinarily would. They give finer fruit and more of it year after year. The death rate is unusually low too. You never saw such healthy orchards.

"Then I help keep them healthy with Hercules Dynamite by cultivating the soil down around the ends of the roots so they grow better. I tell you it pays at all points. That motor truck proves it."

You ought to use dynamite yourself. There is a book, "Progressive Cultivation," that tells all about it. The reading of it will mean money in your pocket. It is sent free on request. Mail the coupon below, *today*.

Nilson Lever Hitch TRACTORS

NILSONS are the tractors which are light in weight, but which, because they are built principally of Steel, are also dependable and durable. They combine strength and big traction with light weight and fuel economy to a wonderful degree.

The Nilson Patented Lever Hitch insures good "Grip" or Traction under all conditions. Three Drive Wheels keyed to the axle form a **Wide Drum Drive** This keeps the tractor **on top** of loose ground and prevents packing of the soil.

In every detail Nilson Tractors set a high standard of mechanical perfection. They are equipped with the famous Waukesha four cylinder Tractor Motor and Hyatt Heavy Duty Roller Bearings. The transmission gears are of especially case-hardened steel machine cut, and are enclosed and run in oil. This means a great deal in increasing the life of the tractor. All working parts are enclosed against dust and grit. The motor is equipped with the famous Bennett Carburetor Air Cleaner. In building Nilson Tractors everything has been done to make them long lived and reliable so that every Nilson buyer may receive the greatest value for his money.

Built for California Conditions

Nilsons have made good in California.

American Fruit Distributors, Brawley, (Imperial Valley) Calif., have used a Nilson Junior discing 50 acres per day of 12 hours, using 18 gallons distillate and two quarts lubricating oil. They have purchased their second Junior.

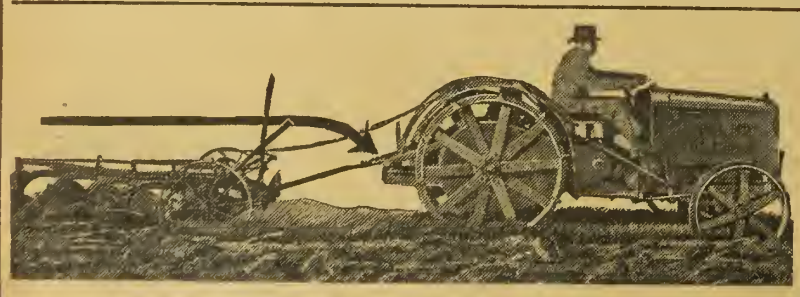
J. M. Warner, Turlock, Calif., has used a Nilson Senior this season to plow and disc 300 acres of river bottom land, pulling four 14 inch plow bottoms, and later operated a 26 x 46 grain thresher during the entire season.

It will pay you to investigate Nilson Lever Hitch Tractors. Write or wire us.

Distributors, with Repairs and Service, at Los Angeles and Stockton.

Nilson Tractor Company

2660 University Ave. S.E. **Minneapolis, Minn.**



plants are ready for spring growth. If pruned earlier frosts may nip the new growth as fuchsias are not altogether hardy locally. Fuchsias prefer slight shade, but in coastal sections do well in full sun but need good supply of water and deep rich soil. A southeast corner is much hotter than a southwest corner. It is pretty warm for them.

Climbing Cecile Brunner, a small pink rose, is as fine for porch as any you can find. Is nearly ever blooming. A fine deep red is Francois Crousse. For yellow use Duchess de Auerstadt; for white, Climbing Kaiserin Augusta Victoria. Aside from roses Jasminum primulinum, our newest yellow jasmine, is a splendid house climber.

Fava Beans

In your issue of August 24, 1918, you refer to Butte County's pack of fava beans. What are they? Never heard of them. Bailey's Cyclopedia does not refer to them. Please explain. And as to planting in the fall would infer they are immune to frost.—Subscriber, Banning.

Horticultural Commissioner Earle Mills of Butte County says: "The fava bean is the commercial name for a special pack of the Broad Windsor, this packing process being a trade secret. The fava bean seems to be in considerable demand among the Latin population of our large Eastern cities, and was all imported prior to the war. Some 5,000 cases were packed in the local cannery last winter; these found a ready sale in the East, but the canners do not believe there is a staple market to be depended upon after the war. From a grower's standpoint the proposition of producing this crop for canning is not particularly attractive, as they require the pods to be picked while still small, two to two and a half inches long, and pay 2½ cents at cannery for same, per pound."

Keeping Comb Honey

I have two hives of bees, the honey from which I keep through the winter and next summer to use as a substitute for sugar. The honey is all in standard comb honey sections. Will you kindly advise the best method of preparing this to keep?—El Bendito Rancho.

The best method of doing this is to store it in a dry room where the temperature is as even as possible. The best method is to pile up the supers with the sections in, placing them alternately crosswise, and raised from the floor so that there will be a circulation of air through. If shut up closely for sometime the honey is liable to mould on the surface, especially if it is a little damp. To protect from ants, place on a table the legs of which stand in cans filled with water or carbolic solution, or on shelf suspended by wires from the floor joists above.—G. A. C.

Poultry Ration

Do you advise feeding just a balanced ration to hens while moulting or have you a better formula? Would it be advisable to feed hens that are setting during the moulting season a balanced ration or a special moulting ration? Many people feed cayenne pepper in the mash during the winter. Is this advisable, and if so how much should be fed to about a dozen hens per day? I have heard that pepper fed in the mash has a tendency to start the hens to set. Is it red pepper or black pepper? — Subscriber, Redondo.

The hens do very well without change in the ration, but a little linseed oil in the mash and sunflower seed in the scratch grain are both desirable because they supply the extra protein that is needed for making feathers. Hard grain, preferably corn, is the only feed that should be given laying hens. If you connot give them Indian corn, milo or Egyptian corn will do very well. Many people do feed stimulants to increase egg production, and these things may have some effect, but remember, the use of all stimulants is followed sooner or later by depression. If your hens lay a few more eggs now because of the stimulants, they will lay fewer later on for the same reason. I think mustard flour is more highly thought of as a stimulant to egg production than cayenne, but if you ask my advice, I would leave them all alone and feed a good full ration, with plenty of greens and little green cut bone once a week as an appetizer.—J. A. K.

Amount of Honey to leave for Feed

How much honey is it necessary to leave in the super at this time of the year? Think the comb in the hive is well filled. One super also very heavy. There are a few other colonies near by in Imperial Valley alfalfa section. How late in the season can the bees make honey under Imperial Valley conditions?—Subscriber, El Centro.

This will depend largely upon the fall flow of nectar. If nothing is expected for several months, leave at least a shallow extracting super full in addition to the two outside farmes in the brood chamber, or five frames the full depth. See also that there are plenty of stores of pollen, or "bee bread" in the combs in the brood chamber, especially if nuclei are made in the fall, as there is great danger of the brood starving out for want of it. —G. A. C.

Crops Along Street

To whom do fruit or nuts belong which fall from tree on street where trees are growing inside of curb and on acreage property? Does it belong to the public or owner of property adjacent to street? — Subscriber, Santa Ana.

Presumably to the abutting property owner. Practically all acreage in California in describing metes and bounds is deeded to the center of the road, with, of course, the right of the public to use the street for road purposes. When deed is so worded there is no question as to ownership of crops along street being in the owner of the real estate. In such case any one gathering the fruits would be guilty of trespassing, though he has every right to use the road.

Worms in Lima Pods

What can be done to prevent worms in lima bean pods? I mean the kind that get in and eat the green bean.—Subscriber.

There is no satisfactory method of hindering this pest which has made itself one of commercial importance for the first time this year. Ventura has been asking itself the same question. Spraying with arsenate is about the only preventive. This is only of value when used very early in the season. Some growers have maintained torches located over pans of oil which attract the moth which are laying the eggs and when when they strike the torch, fall into the oil. It is possible that before another season more satisfactory suggestion can be given.

Potatoes to Hens

How many pounds of cooked potatoes can be fed daily to a dozen hens? Can they be made part of a hot mash? —Subscriber.

The best way to feed potatoes is to cook them and mix them into a mash with bran and other ground feed. I don't think I would try to measure them by pounds. An allowance of one medium sized potato to each bird is enough for most flocks. Potatoes are quite fattening and must not be fed too

generously to laying hens. To growing chicks give all they will consume. One Eastern expert advises cutting raw potatoes into pieces about an inch each way and feeding the chicks all they will eat from the time they are a week or ten days old. I would rather cook them myself. I don't suppose the raw potatoes would hurt the chicks but I do think it would be hard to teach them to like them. Chicks of all ages and sizes are fond of cooked potatoes, and only the laying stock need be limited in their consumption. —J. A. K.

Feed for Dairy Cows

What is the most profitable and most economic feed for dairy cows at present time? This to be fed in connection with native grass. — Subscriber.

Alfalfa hay and silage. There is now practically no concentrate which can be purchased to use so as to leave any profit to the dairyman. Hence growing of Indian corn, legumes, or other crops for silage is the only cheap way which will produce satisfactory results.

Tomatoes Not Setting

I have tomato vines that are thrifty and have been in blossom for at least a month, but have not set a tomato. About a quarter inch back of the blossom a kink forms in the stem holding the blossom and in a short time the blossom falls off, the stem parting at this kink. I kept the vines well watered until they began to blossom, but have given them none since. What is the matter?—D. J. M.

This trouble has been very prevalent this season but as yet we have been unable to discover the real reason. We understand the University of California is working on this matter but has not yet definitely reported on the subject.—D. F. R.

Pruning Raspberries

Should I cut off long unruly rasberry canes now or in January?—Subscriber, Anaheim.

Of course it goes without saying that the old unruly canes should be removed as soon as the season's crop is off. All the sap is then supplied to the young growing canes which are preparing for next year's production. For the sake of preventing spread of insects these old canes should be raked up and burned as soon as possible. Many growers follow the pinching back plan, but it is rather late in the season to secure full effectiveness from such work this year.

Income Tax Deductions

I own a tract of land in Tulare County which has not been under cultivation until the present year. Last winter I was on the place for about five months and expended over $2000 in cash in making the necessary improvements to get the place under cultivation. This expenditure consisted principally in leveling the land, boring a well, and installing a pump for irrigating purposes. Have put the land in crop from which I am to receive a share. In making returns in my income for the year how much of the amount expended in getting the place so improved that a crop could be grown and an income derived from same will I be permitted to deduct from my gross income, if any? The regular county tax has been very materially increased on account of the improvements made. — Subscriber, Bonners Ferry, Idaho.

No portion of the money used in making permanent improvements such as leveling, boring well, extending irrigation system, construction of buildings, etc., may be deducted in making your income tax return. After the ground has been levelled, the plowing necessary for the year's crop, where done by others and paid for in cash, is a deductible expense for the year; likewise moneys paid for cultivation and harvesting, hauling, and the increased county taxes. The government regards all moneys expended in permanent improvements, even in purchase of pure bred live stock for breeding purposes as permanent investment.

Veterinary

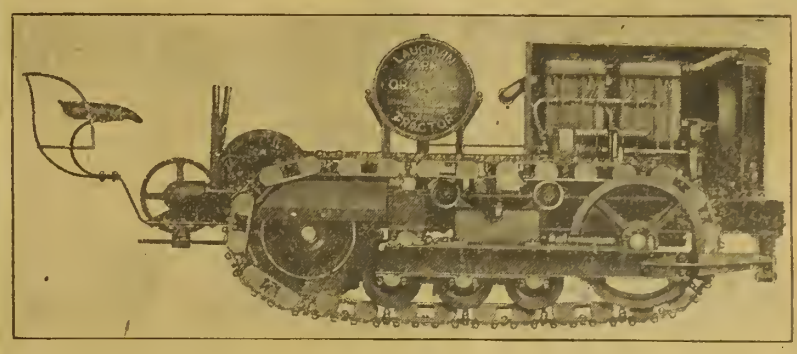
Abscess in Sow's Udder

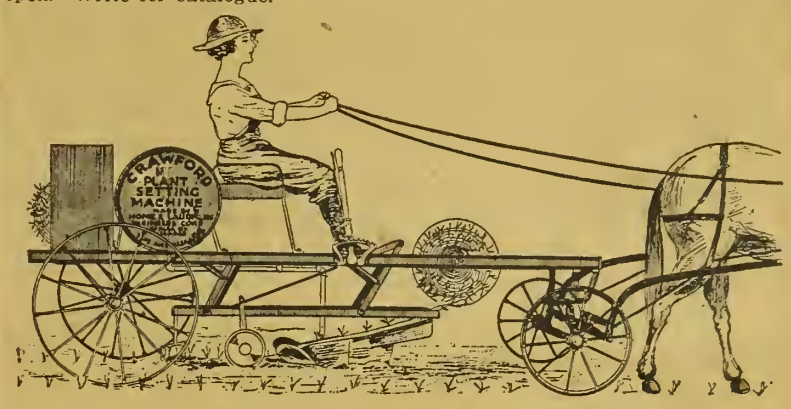
We have a sow that farrowed eleven pigs in April. After they were about five weeks old she began to dry up in her milk, lost her appetite and did not do well for some time. She is now in fine condition, has good appetite but she has constantly been troubled with a boil or carbuncle on her udder. Matter oozes out of it. The sore lasts one or two weeks then heals and another comes. The udder seems swollen. We are using a three per cent solution of iodine every three days and rub her udder with that. The government formula of mineral mixture is always in the lot where she runs. What would you recommend?—Subscriber, Santa Ana.

From your letter we judge that the abscess continues to gather in the same place. A thorn or something may have punctured the skin and broken off inside or the milk duct become closed. The next time it gathers open it just before it breaks and scrape out the cavity with a spoon. Make a large opening so it will not close before the inside is healed. Wash it out once a day with soap and warm water and wet the cavity well with a solution of permanganate of potash; one dram to the pint of water.

Get Territory on the
"Little Husky" Tractor



The "Little Husky" Tractor did all and more than wes expected at the Tractor Demonstration Southern California now has its own creeping grip tractor made entire in Los Angeles factory. The car coupler type of crawler grip demonstrated its practicability in the rough, dry, hard ground and the pulling power of the engine was thoroughly demonstrated when it pulled two 12-inch P. & O. plows, doing thoroughly successful work. Sufficient sales have been made to take our output for 60 days. Purchasers should communicate with us at once to insure prompt delivery. Dealers are wanted. We have good territory still open. Write for catalogue.



The Crawford Transplanting Machine

The Crawford Transplanter excited the keenest interest at all times. This machine that does the work of 60 men in one day, operated by one person, was pronounced the greatest implement achievement of the year. Growers of onions, beets, cabbage, cauliflower and similar products should see and know about this wonderful labor saving machine.

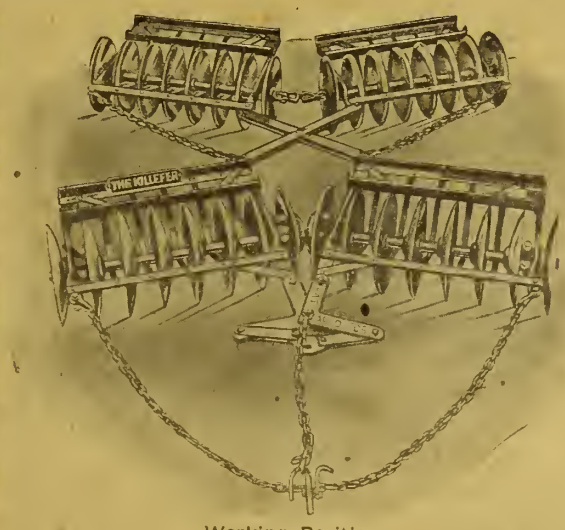
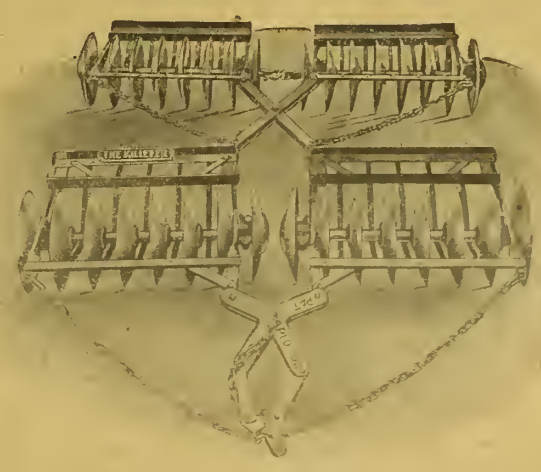
The Killefer Automatic
Double-Disc Harrow

Killefer Efficiency Killefer Quality



Working Position



Automatically Straightened

The Sensation of the Tractor Demonstration

Without doubt this is the most important development made in the manufacture of farm tools to date. This is the only Automatic Disc Harrow on the market. It was designed and built in our own shops completely. We are therefore the originators and have it fully covered by patents.

In the development of this, our latest triumph in Disc Harrows, we have not only maintained the great strength and durability as originally designed but have added additional valuable features namely our

Automatic Shifting Device

controlled by the operator from the seat of the Tractor and a greater flexibility so desirable in a tractor disc harrow, but not found in other makes.

This Harrow is built in all sizes from 5 to 12 feet inclusive.

Order Germain's HAIRY PERUVIAN Alfalfa Seed NOW!

BUY PROVEN TESTED PEDIGREED SEED!

LIMITED SUPPLY + INCREASED DEMAND

ORDERS FOR 20 TONS UNFILLED LAST YEAR

BUY FROM THE INTRODUCER

BUY THE GENUINE "Germains"

Orders for Germain's Hairy Peruvian Alfalfa seed are pouring in. Owing to the small amount of seed raised last season the supply of the genuine, true-to-type Germain strain is extremely limited, and those who intend to plant and who fail to place orders at once, may be unable to obtain seed later on. Last season we were compelled to disappoint hundreds of patrons—and this season promises even greater disappointments.

Remember—we urge you to buy at once—no matter if you do not intend to plant until next spring, buy your seed NOW!

Results obtained by practical ranchers show an average of 2½ tons more alfalfa hay per acre with Germain's Genuine Hairy Peruvian Alfalfa than with the ordinary types.

Special folder upon request.

Inoculate your seed with FARMOGERM and get bigger and better crops. Farmogerm-treated seeds mature earlier and produce larger and better crops than untreated seeds.

Germain Established 1871 Seed & Plant Co. N.E. Corner Sixth & Main Sts. Opp. P.E. Depot Los Angeles, Cal.

Mention this magazine when you write.

CAUTION—For your protection Germain's Hairy Peruvian Alfalfa is sold only in sealed and stenciled bags.

State Fair Dairy Products Exhibits

Results of Scoring Contests With Comment by Prof. C. L. Roadhouse

THE California state fair dairy products exhibits which were a prominent part of the dairy exhibit at the California state fair did not quite equal the number of entries made last year in butter and cheese. The market milk and cream entries, however, were about the same in number. The entries consisted of 16 cubes of butter, 15 cheese and 76 samples of milk and cream.

The entries in the butter and cheese classes were scored by T. J. Harris, official inspector of the San Francisco Wholesale Dairy Produce Exchange, L. M. Davis of the bureau of markets, United States department of agriculture, and S. L. Denning of the dairy industry division at the University Farm.

The entries in the milk and cream classes were scored by C. F. Hoyt, milk specialist of the United States department of agriculture. W. H. Stabler of the veterinary division of the University of California, and J. C. Marquardt of the dairy industry division at the University Farm.

The competitive butter and cheese judging contest for practical creamerymen was won by M. A. Pekar of Swift & Company, Ceres.

Butter

The following are the butter entries, with scores:

Ed Hooper, San Francisco, 94.
A. Wirz, Hollister, 93½.
W. F. Butler, Visalia, 93.
M. A. Pekar, Ceres, 93.
Fred Decker, Montague, 92½.
Thos. Moran, Oakdale, 92½.
N. Nyborg, Modesto, 92.
Arnold Madson, Salinas, 92½.
C. A. Johnson, Bodega, 92.
E. L. Walker, Manchester, 92.
H. Dons, Davis, 92.
P. Peterson, Ferndale, 91½.
E. L. Dilley, Bishop, 91.
H. R. Pyke, Orland, 91.
F. L. Bellows, Reno, Nevada, 90½.

Cheese

Cheddar cheese entries with scores:

H. C. Watson, McArthur, 92; Hugh Barber, Tillamook, Oregon, 91½; J. A. Sherwood, Manchester, 91½; O. R. Lynch, Davis, 91½; A. F. Boies, Point Arena, 91; John Reber, Bieber, 90½; John Reber, McArthur, 90½; Ed Hooper, San Francisco, 90.

California cheese:

A. F. Boies, Point Arena, 94; Ed Hooper, San Francisco, 91; H. A. Kolk, Sheboygan Falls, Wisconsin, 90½; Harmony Valley Cry, Harmony, 90.

Jack or Monterey cheese: O. R. Lynch, Davis, 91½.

Certified Cream: Hollow Hill Farm, 97.3; University of California, 97.2; Adohr Stock Farm, 96.8.

Guaranteed milk—Grade A:

Los Angeles Creamery Company, 97.3; Elliott Brandt Rancho, 96.3; Danish Dairy, 94.3.

Guaranteed cream—Grade A:

Elliott Brandt Rancho, 97.5; Severn Lodge Dairy, 91.6; Peninsula Creamery, 89.2.

Market milk raw:

H. L. Wolshms, 96.8; C. P. Morse, 96.5; Crescent Creamery, 96.5.

Market milk pasteurized:

Crescent Creamery Company, 97.8; Corona Dairy, 96.2; Los Angeles Creamery Company, 95.

Milk dealers:

Excelsior Dairy Company, 95.5; Riverside Dairy, 92.3.

Dairy inspectors:

Dr. Maynard Rosenberger, chief inspector, Los Angeles, 97.3; Ray Hasson, inspector state dairy bureau, Glendale, 96.5.

Butter of Good Quality

S. L. Denning of the dairy industry division, university farm, was in charge of the butter and cheese scoring and offers the following comments:

"The average score of the 16 cubes of butter entered was 92.2. The high score was 94 and no cube scored less than 90½. Sixty-nine per cent of all entries scored 92 or above. This is a very creditable showing for the creameries of the state considering the weather conditions just preceding fair week. The small number of entries was undoubtedly due to the unsatisfactory labor conditions. Under normal conditions the liberal prizes and pro rata money offered for entries in this class should offer a large inducement for the buttermakers to enter.

The main defect in flavor was from old cream, many of the entries containing an unclean, oily or bitter flavor. A few cubes indicated that the buttermaker had attempted to improve the quality of his butter by using neutralizer.

The entries were very uniform in color and were criticized for being mottled. Several of the samples were very high in salt. The packages, as a whole, were very neat and attractive. It was interesting to note when selling this contest butter at the close of the fair that the buyers invariably picked out the neat appearing cubes when an opportunity for making a choice was given."

Bitter Flavors in Cheese

"The average score on all the cheese entered was 91.2. The entries in the cheddar class averaged 90.9 and in the California class, 91.9. The main criticism on the cheese was the bitter flavor which was very prominent. This defect may be caused by ripening the cheese at too high a temperature, for when the storage room is too warm, the ripening takes place too rapidly, especially in the softer cheese, and the bitter flavors develop. Cheese which is made from poor or inferior milk also very often shows this defect. To have good milk is essential in making good cheese."

Milk and Cream Exhibits

C. F. Hoyt, market milk specialist in the United States dairy division, Salt Lake City, Utah was in charge of the milk and cream scoring and has prepared the following statement concerning this contest:

"The market milk business seems to be coming into its own in the matter of recognition. Cash prizes amounting to $160 and 16 gold and silver medals offered by the state fair this year as prizes for the best exhibits of milk and cream show that the fair management is alive to the importance of this industry and demonstrates its interest in the production of good milk. Last year was the first time any respectable exhibit of milk was made at the fair. This year there were 76 entries, coming from many different parts of the state and even from as far East as Pennsylvania. They came in all sorts of containers, from sack-covered ice cream freezers to substantial boxes cork-lined and perfectly insulated. In the main,

the samples arrived in excellent condition.

When arrived they were rushed into a room at a cold storage plant and there kept until they were needed for examination. This examination consisted in determining the points to be allowed in quality according to the government score card, which is as follows: Bacteria, 35 points; flavor and odor, 25; sediment, 10; fat, 10; solids, not fat, 10; acidity, 5; bottle and cap, 5; total, 100.

It may be of interest to note that out of the whole number of samples only 23 had a bacteria count over 10,000, while there were 28 with a bacteria count of 1000 or less.

A feature of special interest in connection with this contest was the dairy inspectors' class. In this class a gold medal and $25 cash was offered as first prize, and a silver medal and $15 cash as second prize. An inspector's exhibit consisted of the five best exhibits from dairymen from his district or under his inspection, and his score was the average of the scores on these five samples. This class exists for the purpose of providing a practical means of comparing the quality of the milk which dairymen in any district or city can produce with that produced in other districts or cities."

Dairy Cattle at Orland Fair

Written for California Cultivator By C. A. Briggs

JERSEYS were leaders in numbers, while quality was supreme. There has never been such a show of "the cream breed" in Northern California, and "The Land of Orland" is waving the Jersey banner harder than ever. Veteran breeders from the South invaded the field and fought for honors with local men. N. H. Locke and J. E. Thorpe of Lockeford were among the victors, Thorpe winning senior and reserve champion cow, grand champion and reserve grand champion cow, Salome of Mossdale, state fair grand champion, being awarded the same honor here by Judge Rubel. Senior champion bull went to S. G. Williams of Orland, senior reserve champion bull to N. H. Locke, junior champion bull to J. A. Button of Orland, junior champion cow to Dr. H. W. Hand of Orland, reserve junior champion cow to S. G. Williams of Orland.

S. G. Williams of Orland won grand champion on bulls, the reserve grand champion going to N. H, Locke.

Awards in other classes: Bull four years and over—N. H. Locke, 1 and 2; W. G. Garnett, 3. Bull three years and under four—S. G. Williams, 1; N. S. Nelson, 2; J. Harrigher, 3. Bull two years and under three years—J. E. Thorpe, 1; Arthur Erickson, 2; S. G. Williams, 3. Bull senior yearling—J. E. Thorpe, 1; N. H. Locke, 2 and 3. Bull junior yearling—John A. Button, 1; Guy Baugher, 2; Dr. H. W. Hand, 3.

Bull senior calf—A. J. and Nellie A. Morey, 1; S. G. Williams, 2; N. H. Locke, 3. Bull junior calf—Arthur Gearhardt, 1; Arthur Erickson, 2; J. E. Thorpe, 3. Cow four years or over—J. E. Thorpe, 1 and 2; A. J. and Nellie Morey, 3. Cow three years and under four—J. E. Thorpe, 1; S. G. Williams, 2; Dr. H. W. Hand, 3. Cow two years and under three—Dr. H. W. Hand, 1; J. E. Thorpe, 2; S. G. Williams, 3. Heifer senior yearling—Morey, 1 and 3; M. Forteni, 2. Heifer junior yearling—Dr. H. W. Hand, 1; S. G. Williams, 2; G. Bougher, 3. Heifer senior calf—J. E. Thorpe, 1; S. G. Williams, 2; Morey, 3. Heifer junior calf—Morey, 1; J. E. Thorpe, 2; J. A. Button, 3. Special on junior heifer calf, S. G. Williams. Special on junior bull calf, Morey. Bull and two of his get, S. G. Williams, 1; J. E. Thorpe, 2; A. Erickson, 3. The Orland Jersey Cattle Club cup for annual contest until won by some member of the club three years in succession for the best Jersey herd of one male and three females went to Dr. H. W. Hand. Last year it was won by A. J. and Nellie A. Morey.

The J. S. Gibson Company herd of registered Holsteins from Williams made a splendid showing, winning all awards.

Official Grades on Hay

Hay grades for crop year 1918 as adopted by the Los Angeles Wholesale Hay Dealers' Association which were requested by The Southern California Sub-Committee of the Western Freight Traffic Committee of the United States Railroad administration are as follows:

ALFALFA

Choice

Shall be reasonably fine, leafy alfalfa of bright green color, properly cured, sound and well baled.

No. 1

Shall be reasonably fine, leafy alfalfa, good color; may contain two per cent of foreign grasses, excepting foxtail and needle grass; five per cent air bleached hay on outside of bale allowed. Must be sound and well baled.

Standard

Shall be of good color, coarse or medium texture. Five per cent foreign grasses and five per cent bleached hay allowed. All to be sound. Or may contain two per cent foreign grasses and 20 per cent bleached hay, all to be sound.

Choice Dairy

Shall be reasonably fine, soft, leafy alfalfa, of bright green color, properly cured, sound and well baled and cut before the bloom.

No. 1 Dairy

Shall be reasonably fine, soft, leafy alfalfa; good color; may contain two per cent of foreign grasses (excepting foxtail and needle grass), and five per cent air bleached hay on outside of bale. Must be sound and well baled and cut before the bloom.

Standard Dairy

Shall be soft, leafy alfalfa, coarse or medium texture, and may contain five per cent of foreign grasses and five per cent bleached hay, or may be same quality, free from foreign grasses but mow burned; or may contain two per cent foreign grasses and 20 per cent air bleached hay.

OAT, BARLEY AND WHEAT HAY

Choice

Shall be reasonably short, bright natural color, free from dirt, properly cured, sound, sweet and well baled, and may contain not more than five per cent of wild oat or other grain hay.

No. 1

Shall be reasonably short, good col-

DE LAVAL
Separators
Save in
7 Ways

QUANTITY of cream that no other separator will recover completely, particularly under the harder conditions of every day use.

QUALITY of cream as evidenced by De Laval butter always scoring highest in every important contest.

LABOR in every way over any gravity system, and also over any other separator, by turning easier, being simpler, easier to clean and requiring no adjustment.

TIME by hours over any gravity system, and as well over any other separator by reason of greater capacity and the same reasons that save labor.

COST since while a De Laval Cream Separator may cost a little more than a poor one to begin with, it will last from ten to twenty years, while other separators wear out and require to be replaced in from one to five years.

PROFIT in more and better cream, with less labor and effort, every time milk is put through the machine, twice a day, or 730 times a year for every year the separator lasts.

SATISFACTION which is no small consideration, and can only come from knowing you have the best separator, and being sure you are at all times accomplishing the best possible results.

Easy to prove these savings

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency write the nearest De Laval office, as below.

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

or, properly cured, sound, sweet and well baled, and may contain not more than 15 per cent wild oat or other hay. Five per cent air bleached on outside of bale allowed. Must be free from weeds and reasonably free from dirt.

Standard

May be of coarse texture, good color, clean, properly cured, sound, sweet and well baled; or medium texture, fair color, and may contain not more than 20 per cent wild oat or other grain hay. Also it may contain five per cent of foreign matter.

MIXED HAY

No. 1

May contain from 25 to 75 per cent of any two kinds of No. 1 hay. The kind of hay predominating to be used first in describing hay. Example: 75 per cent barley hay, 25 per cent alfalfa, shall be called No. 1 barley and alfalfa mixed.

Seventy-five per cent tame oat and 25 per cent barley shall be called No. 1 tame oat and barley mixed.

Standard

May contain from 25 per cent to 75 per cent of any two kinds of standard hay, the kind of hay predominating to be used first in describing hay.

WILD OAT

Choice

Shall be of medium texture, bright green color, free from dirt, properly cured, sound and well baled.

No. 1

Shall be of medium texture, bright green color, free from dirt, properly cured, sound and well baled, and may contain ten per cent foreign grasses.

Standard

May be short, poor color and may contain some stained hay and ten per cent of foreign matter.

STRAW

No. 1

Shall be reasonably clean, sound and well baled.

Standard

Shall be reasonably clean, may have some stained straw, but not good enough for No. 1.

STOCK HAY

Any hay not coming up to any of above standards shall be classed as stock hay.

These grades were adopted for the purpose of expediting the movement of cars. The members of this association will use their utmost efforts at all times to buy and sell hay on the within grading instead of by inspection, as has been the custom in the past.

It is your patriotic duty to buy and sell hay on these gradings.

Notes From the Great Glenn County Fair

Written for California Cultivator By W. S. Guilford.

IN MANY departments this fair this year exceeded the leading state fairs of the Middle West. There was a particularly strong exhibit of agricultural products and of products of communities and farm centers. The show of Jersey cattle, Duroc Jersey, Berkshire and Poland-China hogs was large in numbers and strong in quality. A lot of splendid sheep were exhibited and there were a number of good horses and ponies. The tractor and automobile show was large and varied.

And the crowds in attendance were enormous. Next year there will have to be additions to the grounds.

A company of marines maneuvered, and a marine band delighted the crowds. Aviators from Mather Field at Sacramento provided instruction and entertainment.

The open hearted hospitality of the people of Orland and the management of the fair made friends of all visitors from a distance.

Credit is due to President J. J. Flaherty, Secretary and General Manager E. J. Falk and the directors for the clever handling of all of the details of the fair.

The success of the fair this year will undoubtedly make it possible to greatly increase the prize lists for 1919. Among the changes anticipated are five money prizes in all classes and more group prizes.

C. A. Briggs, of the California Cultivator staff, who had the honor of "clerking" all of the classes in the first Orland fair three years ago, was on hand as usual—always welcome both by fair management and exhibitors.

Over 100 were shown in the baby show.

A good show of fruits was made in the horticultural department. Mrs. E. H. Guilford of Orland won the $100 Frank Freeman trophy for the best exhibit of lemons.

The agricultural exhibit was particularly good—wonderful corn, rice, beans, peas, peanuts, potatoes, carrots, beets, squash and melons being displayed.

The Sacramento Transportation Co. trophy for best rice exhibit was won by the Spalding Co. of Willows.

The L. J. Napton trophy for best exhibit by boy or girl under 12 by Ruth Parker.

Honey and bees were shown and bee culture demonstrations given every day by Supt. W. A. Saylor.

In the farm bureau center contest Bayliss won first, Ord second, Artois third. Very attractive booths were shown and a very superior lot of farm products.

The Butte City district fruit and grain trophies and the W. F. Miller & Co. special for Butte City products was won by Butte City Ranch.

L. H. Linbarger of Orland judged all of the hog classes except for the special silver trophy, which was awarded to him for the best sow of any age or breed on the grounds. This was done by Prof. J. I. Thompson of Davis. It was the opinion of everyone that the judging of all classes was fairly, carefully and conscientiously done. The placing of the awards was watched by a great many interested people and the judges explained the reasons for the awards in all classes.

The Linbarger special silver trophy for the best sow on the grounds was awarded to J. I. Thorp on the Duroc-Jersey sow Delight of Venadera.

The Horse and Pony Show

A number of very fine horses and ponies were shown.

W. E. Scearce of Orland won first and champion on his Belgian stallion; E. S. Ball of Willows first and champion on his standard bred stallion; S. W. Baugher won first on aged mare; A. J. Erickson second. Erickson won first on two-year-old colt.

F. A. Kingsbury of Orland won first on jack, first on mule colts and first on get of sire.

Butte City Ranch showed eight

ponies, winning eight firsts, two champions, the $100 River Farms trophy for best pony, the $50 Devlin trophy and the Association Silver trophy for best pony display.

Billie Ball of Willows won first on gelding under four years.

Horses and ponies were judged by J. H. Lachenmyer, an experienced judge and horse authority from Illinois.

Sheep

Interest in sheep, both in large and small flocks, is increasing in Glenn County. Through the efforts of the farm bureau 39 new small flocks have been started and many more will follow.

Registered Shropshire sheep were shown by Guilford Farm of Orland. A full flock was exhibited and all prizes awarded.

This flock won the R. A. Beland silver trophy for the best flock. This trophy must be won three times to become the property of any one breeder. It was won by Guilford Farm in 1917.

Guilford Farm won the Bank of Willows special silver trophy for the best lamb shown in Glenn County in 1918.

Ellenwood & Ramsey of Red Bluff exhibited some very fine registered and grade Corriedale sheep. This is one of the newer breeds which was originated in Australia by crossing fine and coarse wool breeds — the result being a good mutton sheep with a good fleece. One ram was exhibited that cost $550 at the recent Salt Lake ram sale.

I. A. Burrows of Newville showed a splendid lot of cross bred sheep—big strong ones with splendid fleeces.

Rambouillets were shown by McInnes of Red Bluff and Kuhn of Henleyville. The latter had champion ram.

The Hog Show

The largest live stock exhibit was in the hog department. Two big modern hog show barns were well filled with entries.

Berkshire Hogs — Although many more Berkshires should have been shown to properly represent the interests of the greatest Berkshire county in the United States, which it is claimed Glenn is, the show was of very high quality throughout. The judging was done to the satisfaction of exhibitors and ringside talent by L. H. Linbarger of Orland, an old time breeder and exhibiter of hogs.

C. E. Barrows, the expert breeder and showman, had the W. F. Sandercock hogs from Sacramento. This is a wonderful collection of animals, splendidly fitted. He won senior and grand championship honors on Winona Lee Champion 6th, first in the aged sow class and senior sow championship on Princess Leader, a daughter of the champion boar, Grand Leader 2d out of the world's champion sow Riverby Princess. Dukes Princess, a daughter of the grand champion sow at Omaha, sired by the National Swine Show champion boar, Baron Duke 201st, was junior champion sow and grand champion. This is a remarkable young animal. "Charlie" Barrows thinks she is the greatest sow in America. A special diploma was awarded to Mr. Barrows for the best fitted herd on the grounds.

Anchorage Farm of Orland had a a very attractive exhibit—pens surrounded by trees transplanted there for shade—and the pens covered with corn for shelter. The display won the Sacramento Bee trophy for most attractive hog exhibit. Anchorage Farm had the junior champion boar in Anchorage Leader 30th—a grandson of Star Leader that promises to develop into a sensational boar. This herd also won the prize for the best herd bred by exhibitor.

The Superior California Farm Lands Co. showed some very fine sows and boars in breeding condition.

The W. F. Fowler trophy was won by Butte City Ranch.

Duroc-Jerseys—There was a strong show of Durocs—three herds being represented: J. E. Thorpe, W. T. Hollingshead & Sons and Adam Lachenmeyer of Orland.

Thorpe won both grand champions, the National Duroc Association trophy for best under six months herd and the Butte City Ranch trophy for the best show of Durocs.

Hollingshead had junior champion boar and Lachenmeyer first on sow and litter.

Chester Whites were shown by Dewey Huffman of Chico.

Poland-Chinas — There was keen competition and lots of excitement in the Poland-China show.

R. J. Yates of Orland had both grand champions, Jay Cook of Paradise both junior champions.

Frank Rieman, Wesley McKaig, Al Standiford and Geo. Nygard of Orland also showed good ones.

CALIFORNIA SWINE BREEDERS' ASSN. MEETING AT ORLAND

A meeting of the California Swine Breeders Association was held Tuesday afternoon, Sept. 17, at the Anchorage Farm Berkshire exhibit at the Glenn County fair grounds at Orland.

President C. B. Cunningham of Mills spoke of the need of the nation for pork and of the opportunity now presented for the organization of the livestock interests of the state.

Prof. J. I. Thompson, secretary, and Frank B. Anderson, director of the association and breeder of Berkshires at Sacramento, also spoke.

In order that this association may be of the greatest possible use to the hog producers of the state, it is necessary to have a large number of members. An active campaign for this is to be conducted in all parts of the state. Director W. S. Guilford will preside at a meeting at the Water Users' office Saturday evening, Sept. 28, 1918.

CLOSE SILO TIGHT TO PREVENT SPOILAGE

Several methods of closing the silo until the feeding period begins are in use. The blanket that is to keep the top layer from spoiling should be heavy and moist to shut out the air. Quite often weeds are run through the cutter as a finishing layer, or the last few loads of corn stalks from which the ears have been jerked may be used. In the latter case no grain would be lost. If spoilage is to be prevented entirely use tar paper. A single thickness cut to fit snugly over the top of the silage will exclude the air effectively and keep the silage in good condition for many months.

At intervals of two or three days for a period of two weeks or more, it will be advisable to tramp the silage around the edges. As the mass settles it draws away from the sides of the silo. If the silo is not yet filled, this difficulty may be prevented to some extent by changing the form of the surface layer as the mass nears the top. Where the surface is kept saucer shaped at first, it should be gradually changed into an inverted saucer by the time the silo is full.

The immediate use of silage is not recommended. If not allowed to stand for at least ten days, the mass is neither green corn nor ensilage, and cattle do not relish it. A period longer than this is desirable.

COW WON

An official of the board of health in a Massachusetts town notified a citizen that his license to keep a cow on his premises had expired. In reply to this letter the official received the following communication:

"Monsieur Bord of Helt.—I just get your notis that my licens to keep my cow has expire. I wish to inform you, M'sieur Bord of Helt, that my cow she beat you to it—she expire t'ree weeks ago. Much oblige. Yours with respek.—Ex.

A number of Angus cattle have been bought in California, and future state fairs should see more herds on exhibit.

Success in small things was never the mother of failure in large things.

Look! Look! Look!

A great herd of registered Holsteins that you can buy at your own price.

W. H. Ginn & Son Herd

Corcoran, California

At Public Auction

Thursday, October, 10, 1918

Fresh Cows Heavy Springers Bred Heifers
Unbred Heifers Heifer Calves Young Bulls

This is a herd of very desirable breeding, and of equally desirable type. The herd is especially desirable in that it contains two large groups of heifers by two high class sires, affording a rare opportunity for the purchase of foundation herds of heifers by one sire. These two groups are composed of TWENTY-FOUR DAUGHTERS OF MERCY SIR PONDYKE, who is by one of the best sons of King of the Pontiacs and out of a 23 pound dam, and TWENTY-FIVE DAUGHTERS OF ARALIA DE KOL PONTIAC SALAMBO, who is by a son of Aralia De Kol and out of the best daughters of King Mead of Riverside.

These two groups comprise a heifer herd of a quality not often found in a herd of this size, and they are worthy the attention of any buyer.

ARALIA DE KOL PONTIAC SALAMBO will be sold. He is three and one-half years old, just a young bull, mostly white in color and a long bodied fellow, and a great breeder. Just look at his 25 daughters in this sale and see the sort he is siring. An outline of his blood lines is given above. His three nearest dams average 610.3 pounds milk and 30.26 pounds butter in seven days, including the four year old record of his dam, and 24,158.2 pounds milk and 1031.86 pounds butter in one year. His dam recently completed a yearly record of 22,097.8 pounds milk and 950 pounds butter in the Morris herd. Remember also that 34 cows and heifers in this sale are bred to him.

Come to this Sale—You Will Like the Cattle

Every animal guaranteed to be a breeder. Every animal tuberculin tested and sold subject to tuberculin retest except a few of the older cows that will be sold exactly as represented on sale day.

Field Notes from the Live Stock Men

Nadgy Korndyke Moole 3d, a junior two year old registered Holstein heifer owned by J. H. Harlan Company, Woodland, promises to become the state record producer in her class for butter in one year. In 189 days she has made 549.18 pounds butter from 10426.7 pounds milk, average test 4.22 per cent. She is a daughter of King Mead of Riverside, the only sire of the Holstein breed all of whose daughters have averaged over four per cent butter fat on yearly test.

Tilly Alcartra now promises to make a really sensational record this year. At the end of 240 days she has over 23,960 pounds of milk to her credit and is milking right around 90 pounds per day. If she averages 74 pounds per day for the next 125 days she will finish her year with over 33,000 pounds milk, and from her past performances she is capable of making that average. At present she is beating the corresponding days of her former world's record by 15 to 20 pounds. She also promises to make right around 1300 pounds butter. Her ration this year is highly interesting, differing somewhat from that of former years. She is not receiving an ounce over 16 pounds of grain daily and is turned out on pasture every day. Tilly is now carrying her seventh calf, and has never been rebred but once in her life, that being last year. Certainly long time testing has not impaired her breeding powers, and physically she is at the present time in the finest kind of condition. She has taken on considerable weight as she usually does along in her lactation period, and her coat has that silky appearance that goes with good health. Her udder is a marvel, showing not a trace of becoming misshapen or broken down, although through it has passed in five years and eight months of continuous testing, over 147,000 pounds of milk. She is safe with calf to Sir Aaggie De Kol Acme, son of the world's official yearly record cow Aaggie Acme of Riverside 2nd.

J. M. Campbell, Escalon, made his start in official testing of his registered Holsteins by putting a record of 27.89 pounds butter in seven days on his show cow Potoki Johanna 2nd, who is an individual of very high excellence. She is safe in calf to a 29 pound son of Prince Gelsche Walker and will be sold in the Second Modesto Sale, October 17.

Luther Thompson, Modesto, also made good at his first attempt at official testing, making a record of 23.06 pounds butter in seven days on the senior four year old Dora Hengerveld of Sylvan Iris. She too will be in the second Modesto sale, bred to the great young sire Sir Chimacum Wayne Woodcrest, whose dam is a 29.81 pound three year old.

The Second Modesto Sale of registered Holsteins, to be held at Modesto on Thursday, October 17, will contain the largest number of cattle and the highest record cows and bulls ever offered at that place. Owing to the small number of registered Holsteins for sale around Modesto, and the small number from the breeders who usually consign to Sacramento, it was decided to combine the consignments into one sale at Modesto. There will probably not be over 80 head in this sale, and there will be no regular October sale at Sacramento.

A. W. Morris & Sons Corporation, Woodland, will sell 100 head of registered Holsteins on their farm at public auction on November 12. The offering will consist of 85 cows and 15 bulls, every animal sold guaranteed to be a breeder.

The annual meeting of California Holstein-Friesian Association was held on the State Fair Grounds the evening of September 3. Officers and directors for the coming year were elected as follows: President, Fred W. Kiesel, Sacramento; first vice president, De Lancey Lewis, San Jose; second vice president, Harry V. Bridgford, Knightsen; secretary-treasurer, C. L. Hughes, Sacramento; Frank L. Morris, Woodland; Gion W. Gibson, Williams; J. M. Henderson, Jr., Sacramento; A. R. Magruder, Ripon; Frank M. Helm, Fresno; W. J. Higdon, Tulare; James W. McAlister, Jr., Chino; W. H. Taylor, Santa Ana; A. J. Stalder, Riverside; W. F. Holt, Van Nuys; Owen Duffy, Napa; R. F. Fisher, Carlotta. A gain of 23 new members was reported by the secretary during the past year.

Prince Gelsche Walker figured prominently in the winnings at this year's state fair. One son and a number of grandsons and granddaughters in various herds won one first, four seconds, two thirds, one fourth, three fifths, and two reserve championships in the individual classes, and his grandsons and granddaughters figured prominently in first prize breeder's young herd, second prize in get of sire, and first prize produce of dam. Thus does he prove his ability to transmit show quality as well as world's record production.

Santa Anita Rancho, owned by Anita M. Baldwin, Santa Anita, is keeping well cleaned up on bulls from the splendid herd of registered Holsteins. Several good sales recently took almost everything of service age, with some fine calves coming on. There are many judges who consider that Merci Lad Korndyke Burke, the senior herd sire at Santa Anita, would be about the toughest nut to crack that has appeared in a California show ring should he come out. The splendid type of his calves is in no small way responsible for the ready sale of bulls at Santa Anita. Superintendent W. H. Taylor has been missed at many of the Holstein gatherings during the past year, for the big ranch has claimed close attention in the production of the enormous crops of this year.

Two thousand hogs will be marketed this year by the James Mills Corporation of Hamilton City. Plans for next year contemplate the raising and marketing of not less than 5000 head. Between 400 and 500 sows are now being bred. Average litters for 1918 were nine and eight-tenths to the litter.

Prof. J. I. Thompson, University Farm, Davis, is one great picker when it comes to hogs. It will be remembered that he bought the Berkshire pig Star Leader from A. B. Humphrey at the P. P. I. E. before the hogs were judged, and the now famous boar stepped out and won the junior championship and reserve grand championship, afterward selling for $1000 to Anchorage Farm, Orland. At the state fair last week "Tommie" pulled another similar stunt. D. O. Brant, of Elliott-Brant Rancho, Owensmouth, happened along with an eye out for a good young Duroc boar and went to J. I. for a little advice. Did he get it? He did. He was promptly taken over to the pen where Uneeda Model

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards six times they will not be affected by mildew or red spiders.

FLEUR DE SOUFRE AND ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, packed in double sacks, are the fluffiest and purest sulphurs that money can buy; the best for orchards and vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste—Atomic Sulphur and for dry dusting.

For Lime Sulphur Solution, use our DIAMOND S BRAND Refined Fleur Sulphur, which we will furnish at a price so cheap that you cannot afford to purchase ready-made solutions.

We are equipped to make immediate shipment. Send for illustrated booklet; also price-list and samples.

Colonel 3d was quietly snoozing in the exhibit of H. P. Slocum & Son, Willows. Yes, Mr. Slocum would price him, and he was no sooner priced than he was sold to Mr. Brant. When judging day came Uneeda Model Colonel 3d never faltered in reaching the junior championship, and Slocum himself concedes that he is a $1000 pig.

The Red Cross Auction at California State Fair proved to be a most successful affair. Breeders and others had contributed of their best and when Governor William D. Stevens mounted the block he found appreciative bidders right from the start. After the bidding was well under way the governor introduced Col. Ben A. Rhoades as a friend of 25 years, and the colonel then proceeded to extract the money in his happiest manner. The idea of the sale, which netted $2529 for the Red Cross, originated with Chas. W. Paine, secretary of the State Agricultural Society, and the popular secretary found ready response when it became known that such a sale was contemplated. C. L. Hughes, Sacramento, attended to the management details of the sale.

Interesting News to California Horsemen

By Wayne Dinsmore

Breeders of Percherons in California and those who contemplate going into the raising of this particular breed of purebred draft horses should be particularly interested to know that the majority of the stallions that are produced and sold in the Corn Belt states go to Northwestern Canada, Washington, Oregon, Idaho, Montana, Wyoming, Colorado and the Dakotas. Interest in draft horses in this part of North America has been increasing rapidly in the last two years. Reports coming from the leading horsemen in those sections indicate that more such horses will be sold there in the next year than ever before. This is to be expected because crops are promising throughout the West this season and farmers realize the need of heavier horses. They will have them, too, if the seasons are only favorable so that grain can be produced. Every good crop season west of the Missouri River means an increased trade in draft horses, especially stallions. California breeders who have colts to sell will do well to take good care of them. Let the stallion dealers of those states that are buying such horses most heavily know what kind of stock is to be had.

There will be no trouble in selling all surplus colts available if they have been properly grown out.

America is at the beginning of a new era in horse breeding. Draft horses will command higher prices in this country in the next few years than ever before. The high price of feeds and the scarcity of man labor throughout the Corn Belt states have curtailed horse breeding to a considerable extent. The West, with its extensive pastures providing comparatively cheap feeds, has a great chance now to step in and raise draft horses and have them ready for the market when the war is over. The Central or Eastern states will have no surplus horses, — not even enough to work their own land most effectively. The European people say "America should do everything in her power to keep up draft horse production during the war, for we will need horses and lots of them to build up our agriculture after hostilities cease."

The building of American ships as a war measure will, after the war, place us in a position to take first rank in ocean production and transportation.

Lady Mead Salambo

Recently completed yearly record of 22,097.8 pounds milk and 950 pounds butter. Owned by A. W. Morris & Sons, Woodland.

ANOTHER HIGH RECORD DAUGHTER FOR KING MEAD OF RIVERSIDE

Lady Mead Salambo, owned by A. W. Morris & Sons, Woodland, recently completed a year's record of 22,097.8 pounds milk and an even 950 pounds butter. She is sired by King Mead of Riverside and is out of Pet Salambo of Riverside who made 22,287 pounds milk and 1003.28 pounds butter in one year. Her full brother, King Riverside Mead, sold in the guaranty sale last December at the age of six months for $1000 to A. B. Comfort, Guernsey, in whose herd he is now in service. Her son, Aralia De Kol Pontiac Salambo, by Aralia De Kol Pontiac Segis, son of Aralia De Kol, heads the W. H. Ginn & Son herd at Corcoran, and will be sold in their dispersal sale on October 10, together with 25 of his daughters and 34 cows and heifers in calf to him.

Second Modesto Sale

65 REGISTERED HOLSTEINS 65

Modesto, California, Thursday, October 17, 1918

CONTRIBUTORS:

BRIDGFORD COMPANY, Knightsen. C. G. OUTLAND, Modesto
LUTHER THOMPSON, Modesto. R. L. HOLMES, Modesto.
J. S. GIBSON CO., Williams. J. M. CAMPBELL, Escalon.

Including the complete dispersal of the C. G. Outland herd, and the sale of all of Luther Thompson's cattle of milking age, with high class consignments from the other four well known breeders. Among the females are:

A DAUGHTER OF KING KORNDYKE SADIE VALE.
TWELVE DAUGHTERS OF HERMANA IGNARO, who is by a son of Ignaro De Kol, the only sire that has nine daughters above 20,000 pounds milk in one year.
A DAUGHTER OF THE 44 POUND $15,000 BULL, Spring Farm Pontiac Cornucopia, due to calve November 8 to King Segis Alcartra Prilly, twice grand champion bull at California state fair. The four nearest dams of this heifer average 33.80 pounds butter in seven days.
POTOKI JOHANNA 2ND, 27.86 pounds butter in seven days, a real show cow bred to a 29 pound son of Prince Gelsche Walker.
A DAUGHTER OF PRINCE GELSCHE WALKER, that made 577.8 pounds butter in one year as a junior two year old.
DORA HENGERVELD OF SYLVAN IRIS, 23.06 pounds butter in seven days as a senior four year old, bred to a 29 pound bull.
A 25.01 POUND COW that made 18,362.3 pounds milk and 814.23 pounds butter in one year, now fresh.
A 24.38 POUND COW heavy with calf to King Segis Alcartra Abbekerk, 30 pound son of the $50,000 bull.
A 20 POUND COW that made 644.09 pounds butter in 320 days, heavy with calf to Prince Alcartra Korndyke, son of Tilly Alcartra.
A 21.90 POUND THREE YEAR OLD daughter of Spring Farm King Pontiac, heavy with calf to the twice grand champion bull, King Segis Alcartra Prilly
AND MANY OTHERS of splendid type and breeding, bred to 29, 30, and 40 pound bulls.

BULLS

A 30 POUND BULL, two 29 pound bulls, a 25 pound bull, and others of rich breeding, including several nice calves make up a high class bull offering.

Catalog in preparation. Write for one.

To Reduce the high cost of living, send for our Wholesale to Consumer Catalogue. Smith's Cash Store, 112 Clay St., San Francisco

GOATS

Toggenburg Milch Goats — Rae P. Williams, Federal Realty Building, Oakland, California.

LUMBER

Lumber-Sash-Doors-Plumbing - Supplies —Building materials of all kinds. New and second hand "A"R.W. shingles 60c per bundle. Send list for estimates. Dan P. (Mission Street) Dolan, 1620-1650 Mission Street, San Francisco.

CATTLE

SHORTHORN CATTLE, SHROPSHIRE SHEEP. Berkshire Hogs and Shetland Ponies. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., California. W. P. Dwyer and W. S. Guilford, Owners.

For Sale—20 head first class Registered Jerseys, cows and heifers, the oldest being five years. Address Box 907, San Diego.

Registered Holstein Bulls from high producing dams for sale at reasonable prices. Also a few choice females. McAlister Sons, Chino, California.

Registered Shorthorns (beef) calves and yearlings for sale. Both sexes, reds and roans. Choice goods breeding. Fair Oaks Ranch, Willits, California.

Ayrshires (registered) — A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn, Phoenix, Arizona.

Jersey Bulls and bull calves. Good individuals from producers. Write or come and select. N. H. Locke Co., Lockeford, California.

Elkhorn Farm Ayrshires—For sale young bulls of exceptional breeding and individuality. J. Henry Meyer, R. D. 2, Box 82, Watsonville, California.

For Sale — Polled Herefords; cows with sucking calves and with calf; and yearling bulls. Gay Owen, Calipatria, Imperial County, California.

Sunshine Farm Jerseys — Young bull, ready for light service, for sale. E. E. Greenough, Merced, California.

Registered Holstein Bulls of various ages for sale. Millbrae Dairy, Millbrae, California.

REGISTERED JERSEYS FOR SALE. J. R. CARHART, FULLERTON, CAL.

POULTRY

Fall Chicks For Sale—400,000 S. C. White Leghorn chicks from free range Hoganized stock only, for delivery from July to December, at very reasonable prices. Fall chicks are most profitable—broilers in ten weeks, pullets lay at five months. We guarantee safe delivery of all chicks to destination. Shipped safely anywhere West of the Rockies. No money in advance, pay on delivery. Special prices on 500 and 1000 lots. Finest hatchery in the world. Established over twenty years. Further information write Must Hatch Incubator Company, 424 Seventh Street, Petaluma, California.

Feed High; Eggs, Meat Higher! Our 200-290 egg Leghorns, Anconas, Reds, Rocks, Wyandottes, Minorcas, ducks are more profitable now, clearing $5.00. Some greatest government trapnested hens, 280-283. Hundreds breeders, laying, younger pullets; thousands chicks weekly; reasonable, fine males $1.00 up, worth treble. James Beeson, Pasadena, California.

White Leghorn Baby Chicks—Put in a lot of baby chicks this fall. Help out the food situation. Make some money, buy some Liberty Bonds, give the hatchery man a chance to buy some bonds also. We guarantee our chicks to be first class. Lyon Hatchery, Gardena, one-quarter mile east of harbor boulevard on Palm Avenue.

"Eastman's Bred-to-lay" Hoganized and trapnested Barred Plymouth Rocks. September chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, California.

White Leghorn Baby Chix from heavy laying (Hoganized) stock. $14.00 per 100. We guarantee safe arrival. The Pioneer Hatchery, 409 Sixth St., Petaluma, California.

Fall Chicks — Book order now for your future meat and egg supply. Write for special circular on fall chicks. Stubbe Poultry Ranch and Hatchery, Palo Alto, California.

Chix—Barred Rocks, R. I. Reds, Orpingtons, Anconas, Minorcas, Buff, White and Brown Leghorns. Breeding Cockerels. Enoch Crews, Seabright, California.

C. L. McGee's Houdans, Langshans, Wyandottes, Orpingtons, Rocks, Reds, chicks, eggs, cockerels. S. Berkeley, California.

Black Orpingtons Lay, Weigh and Pay—Prize winners at leading shows. Write for mating list. IVEYMOOR FARM, San Leandro, California.

Buff Orpingtons, Buff Ducks, Bourbon Red turkeys. The Ferris Ranch, S. Reservoir, Pomona, Cal.

FOR LEASE

Orchard In Bearing For Rent—50 acres apples, 50 acres Bartlett pears, 30 acres bean land. 600 acres grazing land near Paradise, Butte Co., California, within the Paradise Irrigation District, one mile from R. R. station. Address Dr. C. A. Oliver, Chico, California.

To Lease—On shares. Large dairy and grain farm. Box 175, Tipton, Tulare Co., California.

LIVE STOCK

For Sale — Two Belgian horses, 4 years old; 1700 weight, well broken. Case Tractor, 9 horse power, virtually new; mould-board plow. Inquire K. C. Henderson, Capitola, California.

For Sale—7 head of well broken Norman horses weighing from 1500 to 1700 pounds with harness complete at reasonable prices. Apply or write to L. M. Edwards, Wheatland, California

For Sale—Beautiful pure bred Belgian mare. Valuable and sure foal getter. For information apply to S. D., Rt. 1, Box 24, Buena Park.

300 Head Sheep for sale. All young and bred for December. Also dogs for herding. John G. Mee, St. Helena, California.

ENGINES

Several New and Slightly Used Engines. ARNOTT & CO., Implements, 112 S. Los Angeles St., Los Angeles

DUCKS

GOVERNMENT LANDS

Oregon, California Government Lands — Booklet free. Tells "How, Why, Where." Write Joseph Clark, Sacramento.

SEEDS AND PLANTS

Early Amber Sorghum makes the best silage and produces the greatest tonnage per acre. Recleaned seed 9c per pound f. o. b. Stockton. Fancy recleaned Sudan seed at 18c per pound f. o. b. Stockton. In lots to suit. Aurora Seed Mill, 48 N. Aurora St., Stockton, California.

Seed Grain — We can make attractive prices on seed wheat and Winter or Gray oats and other field seeds. Have a full line of nursery stock. Supply of seed grain will be limited. Write now. 28 years in business. Carlton Nurseries, Carlton, Oregon.

50,000 Yellow Calla Elliottiana Bulbs. William Richard, 438 River St., Santa Cruz, California.

Peruvian and Common Alfalfa Seed—Specialty. Write for prices and sample. Box 501. Fowler, California.

PATENT ATTORNEYS

Patents — Copyrights, trade marks and labels registered. Solicitor of American and foreign. James R. Townsend, 712 San Fernando Bldg., Los Angeles. Phones: Home A4619: Sunset Main 347.

Patents that protect are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "Patents."

MORE POWER, MORE FOOD

Continued from Page 306

possible discount additional is a handicap which prevents most economical service. The government has taken a hand in financing the seed buyer, also the irrigator on some of Uncle Sam's lands, and it may be that he can some day arrange similar financing of the farm power purchaser. We hope not, however, but rather that cheap money may yet be arranged by the farmer's banker.

The photographs which the Cultivator camera has so liberally provided are most educational and show the intense interest on the part of the attendants. But one scene which we tried to photograph several times we failed to secure. That was the afternoon demonstration. Thousands of people watching and following closely every one of the tractors, with dust almost suffocating, presented a most lively scene, but the dust and the great distance over which the demonstration was spread prevented showing this satisfactorily even in panorama.

This was the third demonstration of the Traction Engine and Implement Dealers' Association of Southern California, the last two under the management of R. M. O'Neil. The first was held on a tract of land near El Monte, with an attendance of 25,000; the 1917 meet in the Eastern outskirts of Los Angeles, with an attendance of approximately 75,000; while this one, on the fields of La Brea Rancho just west of the city of Los Angeles, showed an attendance far greater than the total of both of the others. Of course there were no gate receipts and people came and went as they pleased, but estimating from number of autos and short period counts, there were approximately 150,000 people at this demonstration.

The officers of the association are; President, O. H. Stevens; vice president, H. L. Marsh; treasurer, Alex McCluskey; secretary and manager, R. M. O'Neil; directors, O. H. Stevens, Alex. McCluskey, W. S. Gregory, F. Johnson, R. Dunsmore.

DEMONSTRATION NOTES

It is surprising the number and diversity of exhibits which are gathered at these great demonstrations. Of course the tractors and implements occupy the great outdoors. In the big tent, however, there were pumps and irrigation supplies, electrical exhibits almost without number, pianos, washing machines, trncks, seeds and plants, of course oils and greases of all kinds, air cleaners, springs, shock absorbers, autos, tires, show cases, trailers, seed wheat, power saws, carburetors, and even an airplane company occupied prominent position.

The Homer Laughlin Engineers' Corporation exhibited the Crawford plant setting machine. This machine handles plants which have previously been placed between strips of paper, which, in the form of a long tape runs off a reel into a prepared opening in the ground where a small quantity of water is injected around the roots, the dirt automatically pressed, or firmed, around roots. The manufacturers say that this machine will do the work of 60 men.

The Southern California Wrecking Company sounds hardly like a constructive force, but its exhibit gave many suggestions of economy in construction. In trucks, the big tent contained the White, the Kleiber, Giant, Dearborn, Garford, U. S., Moreland, and Bethlehem.

The Smith-Booth-Usher people with Uniflow Pumps had an instructive exhibit for the irrigator.

The ease of lighting the home in remote sections was shown in the Lalley-Light Electric Booth.

The Delco Light people had a striking electric lighted booth.

Aggeler and Musser's Seed and Plant Booth kept a number of salesmen busy explaining the needs of the coming season's planting.

The Hauser Packing Co. maintained that it was not only necessary to give deep culture to the soil but to supply the plant food necessary. Their plant food exhibit was convincing.

The Fairbanks Morse exhibit of irrigation supplies and general machinery occupied place in the biggest general exhibit tent.

The Wade Portable Drag Saw was busy taking off slices from the big log.

The most satisfactory water measuring device or weir gauge was exhibited by P. W. Sparling.

The Ensign Carburetor had its merits explained. This appliance is coming into general use on truck and tractor.

Of course, the Standard Oil was present with a fine exhibit in the center of the big tent, and its delivery truck was everywhere needed, supplying gas, distillate, oils, and Zerolene.

The Norwalk Tire folks had a convincing exhibit, one feature of which was a finished tire which had cut from it a strip of casing a couple of feet in length, and the freshness and purity of the rubber were shown by an attachment which continually stretched and relaxed this strip.

The Garford people made a showing of the power of one of their larger trucks by hauling a gang of 12 subsoilers in hard 'dobe soil.

A "More Food" campaign was conducted by the Sperry Flour Company, whose exhibit of Baart wheat and placards over the grounds calling attention to the necessity for greater wheat production should result in a materially increased wheat crop this year. Hangers about there were: "Plant More Wheat. Sperry Flour Company can help you. You can help your country. Plant Better Wheat."

One of the most powerful machines on the ground was the Haskins Trench Digger. It had the general appearance of two monster tractors, one acting as anchor and propeller for the ditching machine proper. The ditcher, which may be used as dredger, tiling machine, or for general excavating, showed a liking for eating into the hard 'dobe soil a trench two feet wide and five feet deep.

Tractor girls were numerous, both as representatives of some of the tractor companies and as visitors. The peg-top with leggins and long khaki coat proves attractive.

In the absence of an orchard, in order to demonstrate ability to cultivate close to trees, the Bean Tractor people secured a supply of potted trees which made a most realistic orchard scene.

The Beeman gas propelled hand cultivator bravely tore into the 'dobe and showed its power to give perfect tilth to the garden where conditions are not the best.

The Avery people had a long string of tractors and showed several sizes, in fact, the Avery people say: "There is a size Avery tractor to fit every size farm." Its flexibility was graphically shown in its climb over immense obstructions.

The A. F. George Company exhibited a long line of John Deere plows, harrows, and soil working tools and of course all sizes of the Yuba tractor.

The Whyman Machinery Co., of Phoenix, Arizona, placed an order for a carload of Killefer's new Automatic Discs, shown for the first time at the tractor demonstration.

A farmer living near Fresno was an interested visitor at the Bear Cat tent. He wanted to displace two ten mule teams. He figured that he could sell the 20 mules for $150 a piece, or approximately $3000, and replace them with one Bear Cat Tractor costing approximately $1800. It requires two men to drive the mules, and costs $20 per day for feed, but by operating a tractor continuously he could do his work in the busy season in from 30 to 40 days working two men two

What Does It Mean

Ignition K-W High Tension MAGNETOS With IMPULSE STARTER

In reading over the specifications of the leading tractors, you will see under *Ignition* the phrase "K-W High Tension Magneto with Impulse Starter."

The Impulse Starter

What Does It Mean? To owners of these tractors, it means Sure and Easy Starting, regardless of the weather, how large the motor or how slow the engine is cranked. It means *No* Batteries, *No* Starting Coils, and *No* Complicated Self Starters. It means absolute protection against motor "kick-backs" while cranking even when the spark lever is left fully advanced.

What It Does! The K-W Impulse Starter holds back the shaft or rotor of the magneto until the firing point of one of the cylinders is reached. The shaft is then automatically released and is propelled forward (by means of a powerful spring) at a very high rate of speed—until it catches up to its former position. This produces a spark as large and hot as though the engine was running at full speed, thus insuring an explosion in the cylinder and a positive immediate start.

K-W High Tension MAGNETOS

not only insure the Easy and Quick starting of cold motors, but increase the power derived from the same amount of fuel, over that of any other ignition system. They permit the use of the cheaper grades of fuel and give "No Trouble" service.

Before You Buy a Tractor. Look up a neighbor who is using a K-W Magneto and talk it over with him. Then we know you will insist upon a K-W Magneto on *any* tractor you may decide to purchase.

America's Self-Sacrifice---A Moral Demonstration

AN ENGLISH appreciation of America's help in supplying food is given by Harold Begbie, an English writer, in the Outlook. It won't hurt us to read once in a while of our English allies' appreciation of what we are gladly doing to help in the biggest need that has ever confronted the world. Of course we know that ours is but a tiny bit compared to the all that the Belgians, the French and the British have given these years past, but we're just starting. We've "got to going" and were "going to put it through":

One of the finest moral actions in this war has been done by America. It is action on a gigantic scale, and yet of a directly personal character. Insufficient publicity, I think, has been given to this action.

Is it realized by the people of this country that America has already saved us from capitulating to the enemy? Either we should have been forced into this surrender (with our armies unbroken and our munitions of war unexhausted) or we should at this moment be struggling to live and work and fight on one-third of our present rations.

America is sending to these islands almost two-thirds of our food supplies. Sixty-five per cent of the essential foodstuffs eaten by the British citizen comes to him from the American continent. This in itself is something which calls for our lively gratitude. But there is a quality in the action of America which should intensify our gratitude. For these American supplies, essential to our health and safety, represent in very large measure the personal and voluntary self-sacrifice of the individual American citizen. They are not crumbs from the table of Dives. They are not the commandeered supplies of an autocratic government. They represent, rather, the kindly, difficult, and entirely willing self-sacrifice of a whole nation, the vast majority of whom are working people.

There is only one altar for this act of sacrifice — it is the table of the American working classes. And the rite is performed by men, women and children, at every meal of the day, day after day, week after week.

This act of self-sacrifice, let us remember, is made in the midst of plenty. Well might the American housewife ask why she should deprive her children of food, why she should institute wheatless and meatless days, when all about her there is a visible superabundance of these things. Questions such as these are natural enough on the other side of the Atlantic, and on the other side of the American continent, though 5000 miles away from the battlefields of France.

But the citizens of America do not ask such questions. With a cheerfulness and a courage which are as vigorous as their industry, and with a moral earnestness which is by far the greatest demonstration America has yet given to the world of American character, these people so far away from us on the other side of the Atlantic have willingly and with no coercion by the state denied themselves for the sake of the Entente. They are going short, they are going hungry, for our sakes. They are practicing an intimate self-sacrifice in order that we may hold our own till their sons come to fight at our side. All over America the individual American citizen is making this self-sacrifice, and making it without a murmur. He is feeding, by his personal self-sacrifice, not only these islands, but France, Italy, and many of the neutrals.

This great demonstration of character has had no other impetus than the simple declaration of the facts by Herbert Hoover, the man who fed Belgium. Hoover has told his countrymen how things stand. That is all. The winter of 1918, he declared to them, will prove to mankind whether or not the American nation "is capable of individual self-sacrifice to save the world." His propaganda has never descended to unworthy levels. He has spoken of "a personal obligation upon every one of us towards some individual abroad who will suffer privation to the extent of our own individual negligence."

America has answered this appeal in a manner which marks her out as one of the greatest moral forces in the world. It should be known out there, in the farmhouses and cottages of the American continent, that the people of this country, tightening their belts and confronting the future with an indestructible confidence, are mindful of America's self-sacrifice, and are grateful to her men and women and children for their self-sacrifice—self-sacrifice which will save the world.

Save Burlap Bags

Continued and increasing war demand on the jute industry of India for burlap makes necessary the utmost conservation of this product which we have been accustomed to use freely, even wastefully. India is the great jute center of the world. There the jute is grown, made into fiber and manufactured into jute cloth which is commercially known as burlap or gunny-sacking.

Imports of burlap cloth by the United States normally average about 700,000,000 yards annually. After reaching this country most of the burlap cloth is sewed into bags, most of which are used as containers for food and feed. Investigations by the food administration show that somewhat more than three-fourths of all burlap imported is used by farmers in shipping agricultural products or in buying necessary supplies.

The United States food administration is without authority to control either the supply or price of burlap from India at the moment, but the importance of this product as a food and feed container makes a full understanding of the situation by farmers desirable. Here are the food administration's requests:

Burlap is valuable. Save the present supply, reserving enough on farms for probable future needs.

There is a good demand for second-hand bags at fair prices. Put surplus back into the channels of trade.

Even fertilizer bags can be saved unless acid fertilizers are allowed to remain in them too long. Empty the bags at once, wash and dry them. Sugar bags, after emptying, should also be washed and dried.

You need not mend torn bags that are to be sold. Big manufacturers have special facilities for doing this work and they prefer to do it.

Allow no burlap or bags to mildew or to be damaged by storing in a damp place. Keep them clean and dry.

Any waste of burlap adds to the national demand, which in turn causes an economic pressure for shipping from India. Saving burlap helps to save shipping to supply the American armed forces abroad.

Starting a Farm Flock

Written for California Cultivator By Jean A. Koethen

DOES the Cultivator reach any home, I wonder, where there is not a flock of hens? Does it reach any home where there is not a producing, profitable flock of pure bred hens? The first question may be answered in the negative, but not the second. It is a conspicuous fact, and one by no means creditable to the business sense of the average farming community, that, while most rural homes find room for a flock of some sort, it is frequently unprofitable and still more frequently not pure bred.

We have passed the stage of arguing whether or not poultry pays. If there was ever any doubt about the value of a well cared for farm flock the war has settled it once for all. As long as nourishing food is required for our soldier boys and our children, so long will a well culled, well bred farm flock be a good investment. A mongrel flock is better than none at all, but a flock of good hens, fed largely on what would otherwise be wasted, gives quicker returns than a pig, and involves less capital.

In beginning with chickens, whether one is replacing poor stock with better or starting from the ground up, it is important to begin in the right place. Do not begin by building a house or buying day-old chicks or pullets or hatching eggs. Begin now, this fall, with a poultry garden. If you plant all available ground to poultry greens between now and February you will be ready then for baby chicks. So many people make the mistake of stocking up first and then planting green feed only to find that their chicks are ready for greens long before the greens are ready for them, that this program cannot be too firmly insisted on. It is possible in some communities to buy lettuce for chicks, but this is expensive and not to be depended on. The only economical way of raising chicks is to raise all the greens and succulent vegetables they will eat and to make these things as large a part of the ration as possible. The only limit to the variety and acreage to be planted is the ground at one's disposal, and the size of the flock must depend (or should depend) on the size of the garden. Do not think it will pay to keep a flock of 50 hens when you have only green feed for 25. Better plant greens for 25 and then limit your flock to ten, for they always eat more than you expect.

Having planted your garden, the next thing is a house for the hens you are to have. For a small number, whether Leghorns or hens of the larger breeds, it is better to allow at least four square feet of floor space to each hen. Commercial poultrymen manage with considerably less, but the farmer should not attempt it. A shed roofed house eight feet square, with the front open or enclosed with wire will comfortably house 15 heavy hens or 20 Leghorns, allowing three feet for the smaller breed. If you wish to keep a larger number, make the house a little larger. It is well to remember, however, that you will need either two small houses or a larger one divided into two sections, for the pullets must not be yarded with hens. A house 16 feet long and eight feet deep, divided into two equal parts, and with two separate yards, gives ample accommodation for 15 to 20 hens and a somewhat larger number of pullets. Incubator chicks can be put in the pullet house at the start, and can remain there, the cockerels being weeded out, till they are through the first year's laying. If the chicks are hovered by hens, raise them in little runs and coops by themselves, putting the pullets in the pullet house shortly before they are ready to lay.

Make the house face south and give it as large yards as you can spare. Ror a long time I advocated the double yard plan for poultry runs but I have never been able to make it work satisfactorily, and I don't recall more than one poultryman of my acquaintance who has. The trouble is, that the hens will eat up in a few days all the green that has been grown in two or three months. What they do not eat up they tramp down. It is more economical to grow greens in a yard where the chickens can never reach them and feed them to the flock as they are needed.

Fall is the best time for starting the garden and building the house and runs, for hatching should begin soon after New Year's. Should you wish to begin with breeding stock, buy it between September and January. You can buy it for less at this season and your stock will be accustomed to its new quarters in time for the hatching season. Should you prefer to buy baby chicks, order them for the first of February. If you do your own hatching with scrub hens get some eggs under the hens by the first of February. It is not always easy to procure broody hens at this time, but do not worry if your hatching is delayed till March. March is the best month of the year for hatching, and pullets of any except the Asiatic breeds hatched in March should lay in October or November.

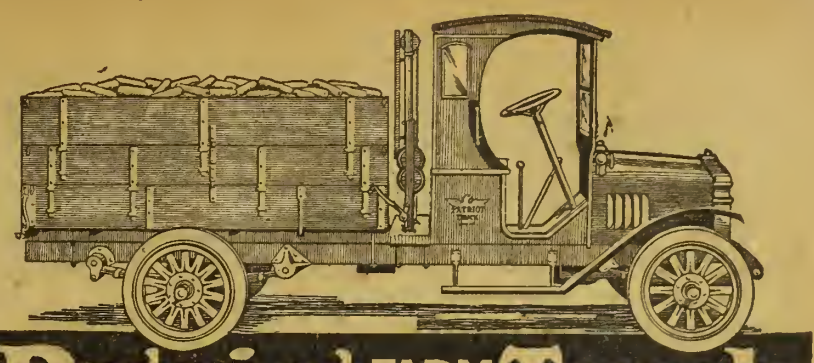
You will need to hatch or buy at least three chicks for every mature pullet you expect to have. If 15 is the size of flock you have in mind, 50 incubator chicks, which can be raised at once in the pullet house with the assistance of a small brooder stove, are enough to start with. But do not experiment with incubator chicks. If you have never raised a brood by hand, wait till some emergency demands it before you try. Mother Biddy knows more about chicks than any of us, and your nights will be more restful and your days less strenuous if you let her mother them. When she leaves them is time enough for you to begin.

IT'S EASY TO SAVE SWEET CORN SEED

A single ear of sweet corn will furnish enough seed for a small garden. Think how easy it is to save the best ear you produced this year for planting next spring when seed may be hard to obtain! All that is required is to dry it thoroughly and store it where it will not be injured. But saving seed from the garden should not be limited to sweet corn. Seed from the best beans, peas, tomatoes and other vegetables should be selected this fall when they can be obtained easily and the supply is abundant.

ORANGES IN SOUTH AFRICA

Steady development is going on in the orange industry of South Africa in spite of the war. A proposition entailing the putting of approximately 9000 acres under citrus fruits in one block is now being developed. It is proposed to plant entirely with Washington Navels, Valencia Lates, in equal numbers, at the rate of 100 trees per acre.



Patriot FARM Truck

Built for Country Roads
Built for Country Loads

The Patriot is the first Motor Truck built especially for farm work. *It is equipped with a practical farm body,* similar to what you have always used on your farm wagon.

It saves horses and high-priced feed. *It brings better markets nearer,* for with a Patriot you can readily drive loads to a market 100 miles distant.

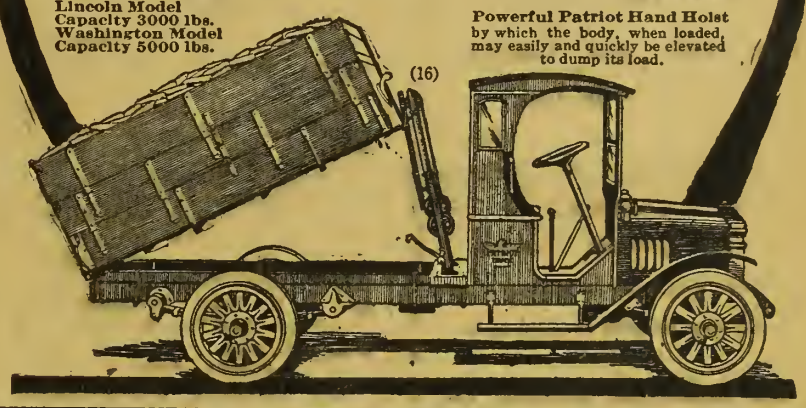
It lays down 15,000 to 20,000 pounds at market in practically the same time that a team will deliver 5,000 pounds, literally bringing the farm to about one-fourth its actual distance from market.

Business farmers can easily see how such perfect transportation greatly increases the value of their farms, to say nothing of the convenience in being master of roads and weather. Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

HEBB MOTORS COMPANY
Manufacturers of Patriot Farm Trucks
1339 P Street Lincoln, Nebraska

Lincoln Model Capacity 3000 lbs.
Washington Model Capacity 5000 lbs.

Powerful Patriot Hand Hoist by which the body, when loaded, may easily and quickly be elevated to dump its load.



Eggs all through the MOULT!

SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley). For Hogs A-1 Hog Feed 10% dry buttermilk) will save from $6 to $12 on fattening each hog.

DEMONSTRATION NOTES

Continued from Page 319

shifts. Operating the tractor would cost $3.00 every ten hours, making a saving of about $17 per day with no expense when not in operation. After the busy season one hand could do the work, and after the sale of the mules this farmer would have a $1200 surplus. The mules could work only eight hours while the tractor could work continuously. Mr. Burt said "A man can buy a Bear Cat and make $25 per day of 10 hours plowing at a cost of $3.00 for fuel and $4.00 for a driver. You do not have to have a $10 a day man to drive a Bear Cat. This leaves $18 per day for the owner for profit and depreciation."

Banks over the country, to men of good credit, loan money up to two-thirds of the value of the tractor at seven per cent on six months' time. This seems to be about the usual ac commodation.

Prof. Davidson of the University of California attended the tractor demonstration. He was en route to Visalia, where he gives a short course in the care of tractors and tractor farming this week.

The Interstate Plowman Tractor made its first Southern California appearance at the tractor demonstration although this tractor is well known in the Central States. Mr. Doak, president of the Doak Tractor Co., handling the Plowman, secured some splendid souvenirs in the way of enormous clods plowed up by his machine, which ran the entire demonstration without the change of a spark plug or engine trouble of any kind.

There was a great deal of interest in the "Little Husky" Tractor made by the Homer Laughlin Engineer's Corporation of Los Angeles. The demonstration of this tractor was very pleasing to its owners and originators and interesting to the crowd. "The corporation has disposed of all it can make for the present," said Mr. John Craig, general manager. "We expect to be in full production in about 60 days."

Mr. Pevovoroff of Ensenada, Old Mexico, placed an order for 12 Belt Rails.

Mr. Cook of Anaheim exhibited a topper and ribber and with George Bullock's Belt Rail demonstration, a goose neck tiller made by H. Jessen at Santa Ana was shown. The output of California made implements is increasing from year to year.

C. B. Hay, sales manager of the Averill Machinery Co. of San Jose, and C. C. Roth, Southern California salesman handling the Russel Tractor demonstration. The Russell 10-20 pulled 2 12-inch plows.

The Appleton Manufacturing Co. manufacturers of the Appleton Silo Filler and now manufacturing tractors, also were represented at the demonstration by C. S. Anthony.

Men with hilly ground showed keen interest in the Interstate Plowman Tractors, as these machines do especially fine work on side hills.

Every farmer who has ever driven a disk plow will welcome the announcement of the new automatic disk shown for the first time at the demonstration by the Killefer Manufacturing Co., the originators. This new disk is braced and held together so that by the length of the hitch the tractor is given the angle at which it is operated, then by backing up the tractor and taking a short hitch a straight pull ahead straightens the disk to pull out, go over a road, etc. The disks were operated at the grounds and attracted much attention. A miniature was operated in the big Killefer tent by C. A. Wise, secretary of the Killefer Manufacturing Co.

Thirty-two lines of agricultural implements were exhibited in the Killefer Manufacturing Company's tent, including a huge five standard subsoil plow, orchard cultivators, beet and bean plows and the Killefer Automatic Disk. On Saturday the entire Killefer organization turned out and attended the demonstration in a body.

The Rock Island Plow Co., known for a good many years in California through the E. P. Bosbyshell Co., distributors, this year entered their tractor, the Heider. An interesting feature of the demonstration was the operating of a silo cutter, the Heider operating continuously for many hours. The Heider did splendid work also, plowing in the hard ground.

The A. F. George Co. had charge of the Yuba Tractor demonstration and the exhibition of the John Deere implements. Some of the clods turned up by this combination would make excellent fortification material.

The Nilson Tractor demonstrated that the pull of the implement could be used to hold the tractor down instead of making it necessary to have a heavy tractor. This feature of the Nilson is valuable and many purchases are made on the strength of this feature alone. Smale and Waterbury of Los Angeles put on the Nilson demonstration.

Mrs. King, the tractor girl who handled the Sandusky so successfully, said that she was good for field operation not only for one day but for several days with the Sandusky. She thinks it a matter largely of a woman's will when it comes to sticking to the game. Mr. Raab handled the Dauch Company's goods.

S. C. Carter Company handled the Lauson, and they were aided by Mr. Crate of the De Laval people of San Francisco. The De Lavals handle the Lauson territory of the North.

The newest was the Sure Grip Tractor manufactured and exhibited by the Union Tool Co. of Torrance. It gives the impression that it has staying qualities.

The Gregory's were there with the Lambert and Trundaar which handled plows beam deep in dry 'dobe. The most enthusiastic driver of these machines is Leonard Gregory who was granted furlough during the demonstration from the aviation field near Riverside.

The new Fordson came and was seen by many. It received both praise and criticism.

Dixon and Griswold are the fellows who are alleged to have put a whole lot of the DiG into the meet. They were everywhere, and nearly every tractor was using their P. & O. line of implements. They had 30 service men in charge of their implements.

Samson in all his strength was there. And the Samson Sieve-Grip surely grips the ground and gets away with it. It was surprising to see it walk away with a big subsoiler.

The Heider was not only shown in general demonstration but was connected up with a shredder which was handling straw and fodder and was making a most attractive feed. It was exhibited by E. P. Bosbyshell.

Some especially effective work was done by the Oil-Pull exhibited by the Advance Rumely Co.

The Cleveland and Steel Mule were both exhibited by F. T. Briles. Tractor Model H was running without attention in a semicircle 12 feet in diameter, showing its ability to turn short.

The California Moline Plow Company exhibited "Model D" connected up with many types of tools and showing the one man method of farming.

The Oliver Plow people made tent exhibit and also demonstrations of modern plows.

W. L. Cleveland Company exhibited in addition to many implements the Waterloo Boy, the Monarch, and the Cleveland power cultivator.

The Interstate is one of the newer Eastern made tractors exhibited at the demonstration by the Doak Tractor Company.

International Harvester Co. exhibited a couple of the medium powered tractors.

Arnott & Company put the Stinson 18-36 into some exceptionally heavy work. They were aided by a representative direct from the Minneapolis factory, John de Bruynkops, and by 20 service men.

J. I. Case Company had hardly as large an exhibit as at the state fair but they showed the ability of the new light weight tractor to handle its small loads; likewise exhibited the medium powered tractor.

L. A. Auto Tractor Company exhibits the Little Bear. It looked true to name.

Fageol negotiated some exceptionally hard ground, likewise had a little track of its own where without driver it was making its continuous circle.

The R. & P. track laying double traction wheel. A big wheeled type of machine has an ingenious "track-laying" feature which gives exceptionally strong tractive power.

Hayman Implement Company made exhibit of implements in special tent.

Two pioneers, Benjamin Holt, president of the Holt Manufacturing Company, and Mr. Dickenson, for 25 years his secretary, came down from Stockton and enjoyed every minute of the week.

C. L. Best Company exhibited one of its big 75's used for the past three years on the La Brea Ranch, where the demonstration was held. It showed no loss of its old time power.

The boys came down from San Francisco and the North 75 strong. They received hearty welcome and gave invitation to the greatest ever which they propose to hold "Somewhere in California" next spring.

The rules forbade the placing of large placards on the tractors, but the boys could not resist, and some big painted banners were exhibited.

The banquet was a complete success. There was plenty to eat and plenty of water. The speeches were rather subdued because of the general hilarity prevailing. The boys all said the water was fine but the banquet was extra dry.

PLANTING NARCISSUS

Examine all bulbs before planting and if a thick crust is found covering the base of any pull it off, or cut it away if it will not pull off. Use the knife too, if any signs of dry rot are found. Do not be afraid to do this for it will do no harm to the bulb. The writer has, many times, cut away the base of bulbs and never had reason to think it did the slightest harm, though many times it has saved bulbs that most certainly would have rotted without heroic treatment. Putting into moist soil will never stop decay after it has once started, and roots can not force their way through a hard shell without using up the vitality of the bulb in doing so. Remember this: As long as the little white spots that are the roots stored in the bulb can be seen, cutting does no harm, and they usually reach up to the center of the bulb.

Narcissi will not need transplanting for several years and for this reason should be given plenty of space in which the bulbs can multiply without crowding. Plant five or six inches apart, each way, and four or five inches deep according to size of bulbs—some varieties having much smaller bulbs than others. A round stick, sharpened at the end, is easily driven into the soil and provides an easy way of setting the bulbs at an even depth, if a mark at the desired height is made.

Planting may be done in September if bulbs are available, or it may be done during October or November.

Where there is a possibility of the soil being at all soggy put a layer of coarse gravel, coarse coal ashes, or other drainage material under the bed. If this can not be done put finer coal ashes, or sand, an inch or more deep, under each bulb as planted and if it comes well up around the sides of the bulb no harm will result.

More than 70 Registered Holstein Cows

31 of them with Records from 20 to 33 pounds butter in 7 days, 30 of them with yearly records up to over 24000 pounds milk and over 1000 pounds butter

Bred to King Mead of Riverside, Prince Gelsche Walker, Segis Pontiac De Kol Burke, Sir Aaggie De Kol Acme, and King Morco Alcartra,

are only a part of the offering to be made at PUBLIC AUCTION by

A. W. Morris & Sons, Corporation

Woodland, California, Thursday, November 12, 1918

NO OTHER HERD IN THE WORLD COULD OFFER A HERD OF COWS BRED TO FIVE OF THEIR OWN HERD SIRES, EVERY ONE OF WHICH HAS SIRED A WORLD'S RECORD DAUGHTER OR HAS AS DAM A COW THAT MADE A WORLD'S RECORD.

There will be

THREE COWS with records from 30 to 33 pounds butter in seven days.
TWENTY-EIGHT COWS with records from 20 up to 29.87 pounds butter in seven days.
THIRTY COWS with records up to over 24,000 pounds milk and over 1000 pounds butter in one year.
TWENTY-FIVE FRESH COWS, tremendous producers.
DAUGHTERS OF—Prince Gelsche Walker; Segis Pontiac De Kol Burke; De Kol Hengerveld Burke; Alcartra Polkadot Corrector; De Kol Burke; Ignaro De Kol; Juliana King of Riverside; Aaggie Cornucopia Johanna Lad; King Mead of Riverside; Aralia King; Buffalo Skylark Ames; Colantha Sir Pontiac Aaggie; De Kol Spofford Promise; Woodcraft Pontiac Korndyke; Tilly Alcartra Son; King Pontiac Ruby Burke; and other noted sires.

Every Animal Sold Is Positively Guaranteed To Be a Breeder

No Animal In This Sale Is Tuberculin Tested

Some very highly bred and high record cows in this sale are along in years, and a few have blemished udders, but they are vigorous breeding cows and great producers, besides being bred to world famous bulls. It will be a rare opportunity to secure this blood at prices far inside their real value.

Catalog in preparation. Write for one.

A WOMAN'S THANKS

Whenever I meet a sailor or a soldier in the street
My thanks lie at his feet,
While o'er his head I place a helmet fair
Of prayer,
That he may come again to all who hold him dear,
Both far and near.

Thus, while I pass a soldier on the street—
This vision fleet!
I do not even hold a grateful hand.
Thus, while I stand,
I only bow my head and say,
"Dear lad, God bless you on your way
And bring you safe home some day
To that dear harbor where you long to be.
I can not thank you for your gift to me."
For who can thank for life, love, liberty,
The one who gives life's hourly sacrifice?
—Eleanor Van Allen Furman.

SONGS OF THE WAR

By John McNaught in Sacramento Union

ANDREW FLETCHER of Saltoun, in a letter to the Marquis of Montrose, wrote some 200 years ago: "I knew a very wise man that believed that if a man were permitted to make all the ballads he need not care who made the laws of a nation." Perhaps we shall some day have a history of a nation based on its ballads. At any rate it is interesting as the war now draws so bloodily to its close, to note with what gayety of heart among the song writers and singers it began.

The French indeed marched to battle singing the Marseillaise, for to them the war was serious from the start, but the British sang the rippling lyric, "It's a Long, Long Way to Tipperary"; the first Americans sailing from New York sang:

"Send the word over there
We'll be over,
We are coming over
And we won't come back
'Til it's over over there."

As for the Germans, it is reported they marched through Brussels in the joy of their great expectations, singing our own old-time favorite of the vaudeville circuit: "Every little movement has a meaning of its own."

The Guns of Flanders

The poets of the current publications took their tone from the songs of the soldiers, and were jubilant in verse. Their exuberance found fair expression in such rhymes and rhythms as this:

Crack Whup,
Did you speak to us?
Do you teach us or beseech us?
We are the guns! the Flanders guns!
Crash! crump!
Do you ask us of our task; us in our mask; us
Demon guns, hounders of Huns?
You sit and moon, we'll fume and boom.
We'll croon the tune of hell hounds doom.
Point and bark! Recoil and hark!
On the mark! Stiff and stark
Are the Huns' sons
When our gun tongues
Dun doom upon the Hun runs.
Oh we're the guns.

The "Mercenary" Army

British sentiment grew fierce when it was made known that their army of professional soldiers sent over to France, had been mocked at by the kaiser as a "contemptible little army of mercenaries," but changed to pride when the little army held back ten times their numbers in the retreat from Mons, and kept their front unbroken till at the Marne they had a chance to strike hard and win. British civilians themselves had in times of peace made light of the soldier whom they called "Tommy," but now all at once there flared up a sense of national glory in the valor of the regular, and a poet wrote of them:

These in the day when heaven was falling,
The hour when earth's foundations fled,
Followed their mercenary calling,
Took their wages; and are dead.
Their shoulders held the heavens suspended,
They stood, and earth's foundations stay.
What God abandoned, these defended
And saved the sum of things—for pay.

The Hymn of Hate

The entrance of the British into the war with all their forces, and the defeat at the Marne, changed German temper from contempt to hate. There was no longer any mockery of the British army nor of British power. In place of former contempt there grew an anger so intense and so passionate that no savagery ever surpassed it. Out of this feeling came the famous hymn of Ernst Lissauer:

So what care we for French or Russ?
It's shot for shot when they shoot at us.
We fight our battles with bronze and steel
And when we stop we shall see them kneel.
It is you we hate with a lasting hate,
Nor will abate one tittle of hate—
Hate by water and hate by land,
Hate of head and hate of hand,
Hate of artisan, hate of king,
Hate that seventy millions fling:
One love they know, one hate they know,
They know but one, one only foe
England.

A Reply from France

So far as I knew the hymn of Lissauer was never answered by a British poet, but among the writers of French newspaper verse was one that took the hatred to his own country and replied to it as if it were a good fortune:

O Germany long live your hate!
If gaunt eyed sorrow dwell with us
And hills and plains are desolate
And some are dead that fell with us,
It is because our skies and seas,
Our charm and genius is to please,
And all that in the world is right
And fine and sweet and good and great,
Excites your envy, greed and spite,
France is the day; and you the night,
Long live, O Germany, your hate.

Russian Song of Revolt

The Russians marched to battle singing the national hym of loyalty to the czar; but they soon learned that the czar was but a puppet in the hands of men guilty of a treason that betrayed alike, the czar, the people, the soldier, the country and the cause. Thousands of Russian conscripts reached the battle lines without weapons to fight with, thousands that had weapons found no ammunition for them, thousands that had both weapons and ammunition had no food. An inevitable revolt followed, forced on by famine and sharpened by wrath gainst the traitors, and the treason. Workingmen struck in the shops, soldiers abandoned the field. Then in Petrograd came the march of multitudes singing:

Let us give up the ancient order,
Let us shake its dust from our feet.
We wish no idol in gold.
We hate the palace of the czars.
We will go to our suffering brethren.
We will go to those that are starving.
With them we will hate the tyrant
And we will challenge him to fight.
March, march, workmen, march.

America Joins In

While such songs were sung and such verses written in Europe, the poets of the United States kept neu-

Wars are won with metal—save it.
Iron and steel are needed for tanks, guns, ammunition, ships, railroads, etc. Folks at home must save iron and steel to help win the war.
Use the old range until after the war.
Make your old range do a little longer by having it repaired. If it's past repairing, then the next best step is to buy the range that saves fuel, food and repairs. The Majestic's heat-tight riveting prevents fuel waste; its perfect baking prevents food waste, and its unbreakable malleable iron and rust-resisting charcoal iron make repairs a rare need.
Sold by leading dealers in every County of 42 States.
Majestic Mfg. Co., Dept. 203 St. Louis, Mo.
Caution: If your Majestic needs new parts, get them from a Majestic dealer and insist on genuine Majestic materials—not light, inferior parts made by ecalpers.

THE SELF-OILING WINDMILL
has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

trality with difficulty. Almost immediately after the raiding and wrecking of Belgium came a song that having little of poesy in its phrases, had none the less a sincerity of sentiment that won popular sympathy, and up and down the country one could hear the chorus:

"Belgium, your tears are falling,
Belgium we hear you calling,
Belgium dry your tears."

Summons of the Dead

A Canadian officer, Colonel John McCrea, killed in Flanders, had written shortly before his death a short poem ending with the lines:

"We are the dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, but now we lie
In Flanders fields.
Take up our quarrel with the foe.
To you, from falling hands we throw
The torch, be yours to hold it high.
If ye break faith with us that die,
We shall not sleep, though poppies blow
In Flanders fields."

When Colonel McCrea's death was made known an American wrote the response:

Fear not that ye have died for naught.
The torch you threw us we have caught,
Ten million hands will hold it high,
And Freedom's light shall never die.
We've learned the lesson that ye taught
In Flanders fields.

So we entered the war and our poets and our verse and song writers began to add their voices to a chorus now become so numerous that further discussion of it must be left to somebody that has a volume or volumes of space at his disposal.

The Master Poets

One of the mysteries of our spiriual life is that the master poets of the world have never been affected by wars of their own time, nor have ever written of them. Homer wrote of a war that had taken place at a time already legendary before he was born. So did Vergil. Dante wrote of Hell, Purgatory and Paradise, but nothing of the Guelphs and Gibellines. Shakespeare lived during the religious wars that turned Europe into savagery, but none of it is reflected in his writings and no one knows whether he was Papist or Protestant. Milton lived during the civil war in England and was secretary to Cromwell, but he wrote of Paradise Lost and not of Naseby and Marston Moor. Goethe lived during the French revolution and the Napoleonic era of conquest, but he wrote of Faust, not of Napoleon nor of Blucher.

It may be that as in the ocean there are deep currents whose motions are beyond the reach of storm winds that fret the surface, so there are in the soul of man deeps that responding only to eternal verities are not moved by any kind of mortal calamity, and that the master poets live and have their being in these.

Yet war reaches the profoundest sympathies of most of us; and were it possible to measure the invisible and intangible, to weight and appraise things spiritual and immortal, it might be found that the heart of humanity yields not to the highest genius, nor to Homer, nor to Shakespeare, a deeper veneration or a higher honor than that it gives to those of whom we say today:

Oh valiant souls, who loved not Duty less
Than Honor, whom no fears could move to shirk
The common task; no tyrant's threat subdue,
When Right and Freedom called in their distress.
Not vain your sacrifice, nor lost your work:
The world's whole heart beats high because of you.

HOUSEHOLD QUERIES

Moths

What can be done for a house that is infested with moths, excepting a constant house cleaning? There are two or three different kinds and they get into foods, clothes, and carpets. Have tried sulphur fumes. After cleaning they seem to come back in just a short time.—Subscriber, Kingsburg.

Moths seem to be everywhere in some sections, and the only way of protecting woolen garments not in constant use is to thoroughly sun, if possible clean in soap and water or gasoline, wrap in paper that you are sure has no holes in it, pasting edges together instead of tying to be sure that no moth will find entrance. Clothing that is left hanging in closets must be looked after almost weekly, put out in broad sunlight unless worn. Moths in woodwork may be destroyed by washing in water in which there is a little turpentine. Where there is a serious infestation in carpets or hangings the only sure way of getting rid of the pests is to have the house fumigated with hydrocyanic acid gas. Where near a city this can be done quite reasonably by a professional. The modern closet built with window admitting light and air helps to control moth pests. Subscriber speaks of several kinds of moth, some of which get into food as well as carpets. These may be buffalo moth, the larva of which is one-fifth inch long covered with dark brown hairs. The adult is a small beetle, black with white spots. To get rid of these wash floors and woodwork with hot soapsuds, pour kerosene or gasoline into cracks. Fill cracks with putty and paint. Same cleaning and airing as above. The moths that get into flour can only be kept out by storing in tight receptacle. In some sections it is impossible to keep moth out of flour where it is kept for any long period. It is better to buy in small quantities and use up quickly. If kept in bin it should be thoroughly scalded and aired before new flour is put in.

How to Use Avocados

Have been trying to find some recipes for avocados and am not successful. Will you please publish some in your next Cultivator, especially salads?—Subscriber, Anaheim.

Cut in small cubes and add to the soup just before serving.

On Toast—Remove the flesh with a spoon and mash with a fork. Spread thickly on a small square of hot toast. Add a little salt and pepper. This is one of the nicest ways of serving avocado.

Sandwiches — Mash flesh, season with lemon juice, salt and pepper. Spread between very thin slices of rye bread. This can be varied by mixing with chopped chili pepper, nuts or olives. A little chopped onion also added makes a delicious sandwich.

Salads. These may be made in almost infinite variety. Mix diced avocado with lobster, salmon, tuna or other sea food, combine with celery, serve with mayonnaise.

Another good one.—Cut fruit in half, remove the seed, fill cavity with chopped celery and nuts blended with mayonnaise or French dressing. Another, — Mash flesh of avocado, beat with mayonnaise, put over chopped celery and apples. Also good combined with apple and banana. The

The Cultivator Patterns

8914—Girls' Dress. Cut in sizes 6, 8, 10 and 12 years. The dress buttons from V-neck to hem at center front.

8955—Children's One Piece Dress. Cut in sizes 2, 4 and 6 years. This simple yoke dress is worn over bloomers.

8948—Ladies' Shirtwaist. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The waist is to be slipped on over the head.

8932—Ladies' Long Waisted House Dress. Cut in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. The dress closes at center front and is rolled back at the neck to form reveres.

8936—Misses' and Small Women's Dress. Cut in sizes 14, 16, 18 and 20 years. The dress is in double-breasted effect, and a very attractive collar follows the neckline.

8942—Children's Dress. Cut in sizes 2, 4, 6 and 8 years. The V-neck is finished with a becoming cape collar.

8952—Ladies' Tunic Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The one-sided effect makes a successful debut in this smart tunic skirt.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
CALIFORNIA CULTIVATOR
Los Angeles.

Cuban way of serving is to place three stuffed olives in a half fruit, add lime or lemon juice sweetened.

As a dessert. Avocado and chopped dates beaten in whipped cream slightly sweetened. Ice cream.—Yolks of five eggs, one quart milk, add Maraschino cherries, two cups sugar, four medium sized avocados, almond or vanilla extracts. Make a boiled custard with the milk, egg and one cup sugar, flavor with almond extract. When the custard is cool add the fruit and freeze. Serve with Maraschino cherries on top of each dish.

As a cocktail. Cut in cubes, serve with cocktail sauce.

All these, if you secure ripe fruit. If unfortunate enough to secure on the market fruit picked green with an astringent, soapy flavor it will be necessary to slice thin and soak over night in weak vinegar and salt. There is nothing better than the ripe fruit but the immature, withered specimens often offered to the inquiring purchaser discourage second trial.

HOW TO PRESERVE VEGETABLES IN BRINE

Brining is a very cheap and convenient method of preserving vegetables for winter use. Sauerkraut made from small or bursted cabbage heads, and pickles made from surplus cucumbers are two familiar examples. The most important use of brining is to save vegetables which are of the best quality now, but which will spoil before time to store them. Carrots and beets should be put away in brine before they become tough and woody. Snap beans, peppers and green tomatoes can be brined any time before frost. Greens, such as chard, beet tops and spinach may be brined if it is not convenient to dry or can them just now. Sweet corn pickled either on or off the cob keeps nicely if boiled ten minutes before placed in brine. The ears must be picked while in the milk state, and the silks should be removed with a brush. Egg plant is kept more easily in brine than by any other method. Sound, mature fruit should be selected, peeled and placed in a weak solution of brine immediately.

The usual formula for making brine is three-fourths of a cup of ordinary table salt or a coarser grade to a gallon of water. One-half pint of vinegar may be added to each gallon of brine. Any water tight container will serve for the brine, but stone crocks and small kegs are more convenient. The vegetables should be placed in the container to within a few inches of the top, then the brine poured over them so that they are well covered. The vegetables may be kept beneath the surface by weights placed on a piece of board or plate.

KEEPING SCUM OFF BRINED VEGETABLES

After the brined vegetables have stood in a warm room for a few days, a scum will collect on the surface and should be removed. The containers should then be placed in a cool cellar, and the surface of the brine covered with hot paraffin, which will exclude the air from the vegetables. It may be more convenient to fill up the container with more brine and place over it an air-tight cover. Brined vegetables keep almost indefinitely if the brine does not leak away or evaporate, says J. T. Rosa, Jr. of the University of Missouri college of agriculture.

RECIPROCAL

"Perkins entertains a good opinion of himself."

"Well, it's reciprocal; his good opinion of himself entertains Perkins."

A Message to the Women Readers of the Cultivator!

—about this marvelous laundry soap that women everywhere are praising.

No Boiling
Less Toiling
Solves the Wash Day Problem

WE KNOW that all of you are interested in improved methods and things pertaining to the household—and particularly in every new way that will save labor and make the daily task lighter.

So we bring you a message about Wash-Day — the day that most women dread.

Here on the Pacific Coast most laundry soaps do not work well on account of there being so much hard water. But—that's the very first problem we solved in making Cocoa Naptha Soap. It works well in either hard or soft water.

Wash Clothes Without Boiling!

Maybe you've heard that before and thought it impossible. But it isn't—now—for those who use Cocoa Naptha say that they get just as good results without boiling as they do with.

It's quite simple. First, wet the clothes thoroughly—in either cold or warm water—and rub them well with Cocoa Naptha Soap making sure that the soiled places get plenty of soap. Then soak clothes for 30 minutes—or over night. In the morning you will find the dirt all loosened and a very little bit of rubbing necessary. Rinse, blue and hang out to dry. You will be surprised at how clean and white they become with so little work.

Saves Transportation and Saves Fuel Too!

The Government wants you to buy local products as far as possible. So here's where you can help. Every bar of Cocoa Naptha Soap you buy means a saving on the railroads.

You know that Uncle Sam wants every one to cut down on the use of fuel. Cocoa Naptha works perfectly in either cold or warm water—so here's another place where you can save.

Cocoa Naptha Soap
Saves Labor—Saves Clothes
Saves Tempers
Saves Time—Saves Money

Order from your dealer. If he can't supply you, write us.

HAY

Under date of September 20, Scott Magner & Miller says:
Receipts past week, 670 tons. The heavy decrease in receipts is easily accounted for when one considers the abnormal rains last week were from 6½ inches down to a trace in different sections. This in itself would stop shipments of hay even from warehouses to say nothing of shipments from the field. The rains have gone through piles of baled hay from top to bottom and rendered most of it practically valueless, for unless it is fed up within a few days after becoming wet it will heat and destroy itself; especially is this the case if it is put in box cars for shipment where the air cannot get at it. Again, if this wet hay is piled up in a barn it is liable to create spontaneous combustion; hence it must be left out of doors. Even with these small receipts there is no demand; everyone seems to have as much hay as he requires for the present Referring to the hay which is still in stack, it may be that considerable can be saved providing the hay which is wet is carefully thrown off and good weather prevails for the baling of the balance, but if a handful of wet hay is pressed into a bale of the dry, it will heat the whole bale in a very short space of time and ruin it. Therefore, it behooves those who have hay in stacks not to attempt to bale it until weather conditions are favorable and then only after they are sure they have taken off all of the wet portion.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling must be added according to conditions:
Fancy Wheat Hay
(large 5 wire bale) .....26.00@27.00
No. 1 Wheat or Wheat and Oat Hay .....23.00@25.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@22.00
Choice Tame Oat Hay .....24.00@26.00
Other Tame Oat Hay .....21.00@23.00
Wild Oat Hay .....19.00@23.00
Barley Hay .....19.00@23.00
Alfalfa, first cutting .....16.00@20.00
Alfalfa, second cutting .....22.00@24.00

No. 1 Barley Straw, bale .....50@80

GRAIN AND FEED STUFFS

Wheat—Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles terminals:

Hard white—	Per cental.
No. 1	3.63⅝
No. 2	3.61⅛
No. 3	3.55
Soft white—	
No. 1	3.63⅝
No. 2	3.58 1-3
No. 3	3.51 2-3
Club and Sonora—	
No. 1	3.60
No. 2	3.55
No. 3	3.48½

For sacked grain add 9 cents per bushel of 60 pounds to above prices. Deduction of three-fourths of a pound is made for weight of standard grain bag. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to its merit.
Barley — No. 1 feed, 2.37½@2.45 per cental; milling, 2.55@2.60.
Oats — Red feed, 2.55@2.65 per cental for ordinary and 2.75@2.85 for choice; seed do, 2.90@3.10, with recleaned at 3.20@3.40; black, 2.50@2.65 for feed and 3.00@3.25 for seed; do, recleaned, 3.50@3.75.

SEEDS

Prices in round lots, lb.:
Millet, recleaned .....5@5½
Flax .....8@8½

Rape .....2½@5

Citrus Fruit Market

Los Angeles, September 25, 1918.

Ten dollar sales of Valencias are still being made, though the price more generally ranges between six and nine. A few yet to go will be cleaned up at long prices.
The lemon market is still very quiet; large numbers of foreigns are being received and the price is ranging low, around three to four dollars, a few sales being made as high as five.

Shipments

Shipments of citrus fruits from Southern California to date since November 1, 1917: Oranges, 13,725 cars; lemons, 5492; total, 19,217. To same date last year: Oranges, 38,420; lemons, 7463; total, 45,883. From Central California to date this season: Oranges, 2536; lemons, 115; total, 2651. To same date last season: Oranges, 4665; lemons, 164; total, 4829. From Northern California this season: Oranges, 203; last year same date, 845.

ONE WAY OF ASSISTING IN FOOD CONSERVATION

One of the first duties of the officials and people of the United States in the present food conservation campaign is to allow no food products to go to waste. The following note received from G. R. Gorton exemplifies this idea in such a way that we consider it to be worthy of greater publicity.

"During the first picking of Muscat grapes the writer had occasion to seize and hold at one of the local commission houses a considerable quantity of grapes which tested below the standard set by law. The fruit had been picked by a grower who professed ignorance of the law—although this was not his first experience with grape picking. However, the fruit was too green for table use, and the question of suitable disposal arose. I suggested selling for jelly purposes and at the request of the grower communicated with one of the local firms. This manufacturer stated that he did not ordinarily use Muscats for his products because they are too sweet, but upon being informed that the lot had been condemned for the very opposite reason but were sound and otherwise good, consented to make a test with one box to see if the fruit could be utilized. The test was satisfactory and the deal was made.

There was probably nothing new or startling in this incident, but at the present time it might serve to remind those who are dealing in foodstuffs that it is in accord with the national policy of food conservation not to allow anything of the sort to go to waste if it is possible to prevent it. At the same time it is possible to comply with the provisions of the laws which have been enacted for the protection of the public, and which it is the sworn duty of all horticultural officials to enforce."

More Sugar Beets

THE policy of the United States food administration for California regarding the planting of sugar beets within the state for the coming year, and new maximum prices on wet and dry sugar beet pulp, yere announced today by Federal Food Commissioner Ralph P. Merritt.

Fixing of maximum prices on beet pulp is another step toward protection of the dairy herds of California from an actual world wide shortage of dairy and cattle feeds and resulted from a recent conference in Washington with the refiners. The new authorized prices follow:

Wet pulp direct from the factory, 80 cents per ton; wet pulp from the silo, $1.25 per ton.

Dry pulp, $40 per ton f. o. b. factory, including commission of wholesale distributors.

These prices are lower than those prevailing at the beginning of the season. Priority in shipments will be given for dairy demands.

Outlining his policy regarding the planting of the coming year's beet sugar crops, Merritt said:

"A larger output of sugar is imperative but the food administration will not urge beet growers to make sacrifices from patriotic motives by planting sugar beets unless the refiners whose operations warrant it will pay the producer such a price as will return him a reasonable profit.

"The government has no power to guarantee the refiners a price for next year's sugar and consequently has no power to force the refiner to pay the producer a fixed price for his product. However, all indications point to a sufficiently high price for the refined product to make it good business for the refiner to offer additional encouragement to farmers in the shape of a stimulative price."

Blasting Dry Farming Land

It is the heavy soils that most frequently are dry farmed, because they do not irrigate well by usual methods, and thorough deep breaking of these soils will help materially in making the dry farming method a success. There are light soils dry farmed, of course, but these can not be helped through blasting, especially when they are of coarse and open texture, like sand, and when they are loose enough several feet down to permit free penetration of roots and water.

The blasting, followed by correct related treatment, has its chief bearing on the capillarity of the soil, on its manner of taking up and holding water—two distinct things.

When a soil is in the best possible granular condition, moisture will pass up and down and in other directions through it as fast and as freely as oil passes up a lamp wick. There is no flow of water; just a transmission of tissue, thin films from soil particle to soil particle. In the granular soil any moisture applied to the surface spreads rapidly downward in this manner, penetrating all through the soil evenly. The depth to which it penetrates may be surmised from examinations of granular irrigated land, which often becomes wet down 20 feet. The rapidity of the capillary movement can be gauged, also, by the fact that this 20 feet of wet ground will be dried out almost completely by surface evaporation during four to six weeks of dry weather if the surface is not mulched in some manner.

But this movement of water takes place only when the ground-wick is "drawing" well. If the wick be squeezed at any point, the moisture movement slows up there to a fraction of what it should be. Now, the natural puddling of fine soil corresponds almost perfectly to squeezing of a lamp wick, and puddling always occurs in soil left to itself. Rain falls. For two inches, four inches, or six inches or deeper into the ground there is a saturated condition, if only for a few minutes. There is a current of free water, which carries soil particles together and leaves them almost as solidly in a block as though cemented. The result is that the wick is squeezed at this point so much that further rain falling on the surface is not carried down to the deeper soil freely, nor is the moisture already there allowed to rise freely. The squeezing may take place at any point below the surface. Frequently the entire top two feet is in this condition, and the under soil little better.

The storage of moisture depends on the completeness of granulation of the soil. When all the particles lie loose so as to hold films of moisture, and are kept apart by sufficient humus and other organic matter, each foot in depth of soil can hold moisture enough to make a layer of water one to three inches deep. To hold enough for the largest crops then is only a matter of providing additional depth of mellow, granular soil. If the soil is not granular and fine, the one to three inches of water it will hold per foot in depth must be scaled down to half an inch, or a smaller fraction.

It thus becomes apparent to anyone who examines the matter intelligently that good tilth down deep is the nub of the whole moisture supply matter in dry farming. Blasting of heavy soils opens them up and fines them in a manner impossible to do in any other way except by hand digging. If the blasting is accompanied by the growing of crops which leaves big quantities of root-humus in the under soil, and, further, if cover crops are turned down in quanitty, the loosened and fined soil will be kept from puddling, and moisture conditions will continue to improve as the seasons pass. Surface mulch cultivation, of course, is absolutely essential to prevent the escape of the stored moisture, for soil in good condition will spend its moisture through evaporation faster than soil in poor condition.

Everyone trying to manage soil in a dry section without irrigation should apply these principles. It is well to begin with a small area, blasting the family garden and an acre or two of the best field, for instance. Experience will demonstrate many details that can not easily be described.

TRACTOR POINTS

The farm tractor is essentially a one-man outfit, and its utility to the farmer lies partly in the fact that with it one man controls a large amount of power. One man can hardly handle more than four horses in a team in ordinary farm work, but he can easily handle a tractor that delivers 30 horse power at the draw bar. It is very evident from this that the larger the tractor the greater the saving in man labor. One man and a small tractor may easily handle three plows. This work done with horses would require probably two teams and two drivers. One man and a large tractor can possibly handle eight or ten plows. In this instance the one man takes the place of the four or five drivers that would be needed for the teams.

Whether the job be drilling or disking, harrowing or seeding, it is seldom necessary to have more than one man with the outfit. If the tractor for plowing is equipped with a self-steering device, the operator has practically nothing to do except to watch his plows, and these require very little watching.

Time Spent in Caring for Tractor

When compared with what a horse expects, the tractor surely does not ask much of its owner. It requires no valet service, does not have to be watered and fed three times a day, curried and rubbed, nor does it require its stable to be cleaned each morning. Its feed, in striking contrast to what the horse eats, can be stored anywhere without attention. As for itself, when it stops all attention and care stops, while the horse, through the long winter months of idleness, requires feed, feed, feed, and care all the time. All the tractor asks is an occasional overhauling, and surely there is nothing disagreeable about this work when compared with the services which the horse requires.

Cost of Housing Farm Tractor

A tractor needs only a shed for protection just large enough to permit the outfit to be run in. This is in striking contrast to the expense of barns required for horses. On the basis of 750 cubic feet of space, which it requires to correctly stable one horse, eight horses would require 6000 cubic feet. A tractor of about the same working capacity would only require one-eighth as much space. Feed for each horse requires about 1400 cubic feet, 100 feet for grain and 1300 for hay and straw, or 12,000 cubic feet for eight horses. The feed, that is, fuel for a tractor, is merely a tank and some cans placed wherever convenient.—Farm Implement News.

LOYALTY PLEDGE

Every member of the recent class graduating from the University of California signed a pledge of loyalty to the United States. The university now demands of every member of the faculty the signing of the following pledge before the beginning of the new year.

"As an American citizen I hereby pledge my abiding loyalty to the United States of America and my unqualified devotion to the right and to the victory of the cause for which she fights in the present war, and I understand that my status as a member of the faculty or employe of the University of California is conditioned upon the truth of this statement."

SAMSON SIEVE-GRIP TRACTORS

GMC TRACTORS GMC TRACTORS

In the fight for greater food production, enlist a GMC SAMSON SIEVE-GRIP TRACTOR. Thousands of its users secure maximum crops. Its years of achievement are convincing.

The GMC SAMSON SIEVE-GRIP TRACTOR is built to last. It is always ready for the job. It will do your work, day after day, cheaper, better and quicker than any other power.

The GMC SAMSON SIEVE-GRIP TRACTOR has many superior features. Its Sieve-Grip wheels give traction on any surface and do not pack the soil. Its Nodust-Moisto-Rizer protects the motor from all dust and grit. Its lubricated Roller Pinions insure minimum friction loss and deliver maximum power to the drawbar. Its Automatic Control assures simplicity of operation and provides any desired set speed without deviation, regardless of load, to the tractor's maximum capacity.

Let a GMC SIEVE-GRIP TRACTOR help you serve effectively.

Ask the man who owns one or send for our illustrated booklet, Better Farming.

"Can I get as many eggs from my hens as I should?"

Surely!

IF you have not received a copy of the 1918 edition of our handbook—"Makes Hens Happy"—we want you to have one. It is a splendid guidepost to success in the poultry business; and no one knows so much about poultry-raising that he can afford to overlook the big money-saving and money-making suggestions embodied in this booklet.

There has been such a tremendous demand for this booklet, however, that we cannot say how long the supply will last. But—this much we can say: If you fill out the coupon below and mail it today—we will promise to get your copy to you post-haste.

Mail the coupon NOW!

Stock and Poultry Food Department,
SPERRY FLOUR CO.,
152 Weber Ave., Stockton, California.

Gentlemen:

I shall be glad to have a copy of your handbook—"Makes Hens Happy"—which is to be sent to me FREE.

Name .....

Address .....

After all, the problem simmers down to feeding. If you let the hens loll around waiting for *them* to make use of the embryo eggs that are in them—you won't find it very profitable waiting.

You know that Nature provides each laying hen with just so many eggs in embryo. And—if you leave it to Mrs. Hen she will take six or seven years to produce her quota of eggs. And, incidentally, she will leave *you* high and dry—by the time you have paid for her feed and keep all that time. Not much in that—is there?

Your job, then, is to see that the hen produces her *full supply of eggs in two or three years*. And—the biggest part of your job is to see that she gets the proper feed—the balanced ration—she needs to give you the best (and the most) that's in her.

Quite a problem—you say? It is—if you waste a lot of time, money and energy experimenting with hand-mixed feeds and mashes. But it isn't—and it won't be—if you do what thousands of successful poultrymen are doing today: if you bank on Surelay.

Surelay contains *sixteen* distinct ingredients that every hen in your flock needs to make her a profit-producer. It is made so good, so wholesome, so tasty, that every time Mrs. Hen takes a peck of Surelay she is eating a little of everything that goes to make up an egg.

There is nothing mysterious about Surelay—or what it will do. You know what to expect of it—day in and day out. You know that it contains just the proper proportion of *protein* for the white—just the right amount of *fat* for the yolk—just enough *lime* for the shell.

And, what's more, we make no secret of it. You will find its analysis printed on the back of every sack. And remember: what's *on* the sack is *in* the sack, and that's what makes the *eggs*.

So—what's the use of bothering with hand-mixed feeds that are only guesswork at the very best? Where's the dollars-and-sense? Why not "cash in" on the experience of countless poultrymen who have found that Surelay—a uniform, high-grade, perfect-balanced ration—is *always* the most economical, convenient and dependable feed you can use?

[Be sure to look in your Surelay sack for the Certificate that entitles you to our 1919 Surelay Egg Record and Calendar]

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The beautiful scene on the cover of this issue gives a faint idea of some of the beauties to be seen at the Liberty Fair to be held in Los Angeles. The fair started with the idea of being strictly a utility or educational exhibit of California's products, and with the idea of securing greatest possible production from California's rich acres. Nor has that idea been given up, and the exhibit will be truly educational. However, the management rests in the hands of people with a big idea of the eternal fitness of things, and they have determined that an agricultural fair shall have the beautiful setting which agriculture has in nature. Therefore, the farmer coming to the Liberty Fair to learn how to produce an extra bushel of potatoes to the acre cannot help but be inspired by the setting which has been given to this great show.

DOLLARS TO BE PROUD OF

A Colorado farmer has been figuring a bit and writing a little about true patriotism. He refers to some business activities wherein a little shrewdness and more of cold, calculating cleverness is making some profiteers immensely rich handling the products of other men's labors. For himself, however, he has pride in the fact that some of his dollars which have gone into the treasury of the country to aid in the maintenance of liberty have come from the production of foods on acres formerly idle or, more, from acres made to do 100 per cent service because of more intensive culture and more intensive thinking.

"Why? Because in growing my wheat I have contributed something to the world's welfare. I have tried both ways, and I think I am entitled to speak my mind in the matter. The man who is to feel himself a man must earn his way in the world by definite service. I am not saying that farming is the only way open to him; but it is a mighty good way. There are not many better."

FOURTH LIBERTY LOAN

America is coming up grandly in the Fourth Liberty Loan drive. Some sections have already oversubscribed their quota. The drive is requiring the energy and hard work of millions of patriotic boosters. A walk of a half a dozen blocks on a busy city street early any afternoon carries one by booths and working units. On Monday afternoon this week we saw two of these units working on one block. On one big truck were speakers and singers and surrounding it was a band of some 30 pieces. In the country the canvass is more quiet and equally as effective. Six billions is an awful sum, absolutely beyond the comprehension of any of us, but we may all comprehend that it takes the ultimate effort of every one of us to reach the goal. While there should not be a single American who does not advance something from his means to our government, it is estimated that the participants in this fourth liberty loan will aggregate about 25,000,000, or one out of about every four of our people. The average is small; let every Cultivator reader, not simply the head of the family, but every member of the family take at least one of the Liberty Bonds. The government plan calls for the payment of ten per cent with the application. Other payments to be: On November 2, 20 per cent; December 19, 20 per cent; January 16, 20 per cent; January 30, 30 per cent.

IRRIGATE THE TREES

Many are the complaints every summer regarding little leaf, trees with tops partially dead, "trees blossomed almost white last spring but bloom was small and as later proved, set no fruit," and the like from deciduous orchardists. These complaints are usually accompanied by such indefinite information that no certain diagnosis can be made, but a reasonably shrewd guess in many of these cases is that the trees were deprived of moisture after the fruit had been harvested. The Cultivator has continually called attention to the fact that every tree, even in the perfectly dormant state, needs moisture at its roots. Last year was an especially trying one. No rains came until midwinter and trees which were not heavily irrigated had to stand a period of almost 12 months drouth. Hence there has never been a season when the complaints regarding off condition of trees have been so general as this year. This year some sections of the state have been visited by very heavy rains, and there will be no probability of fall drouth injury. However, there are many sections of the state which have had only light showers. Orchardists and even vineyardists who can command water should see that the coming season's fruit will not be lessened because of withholding water during these fall months.

PLANNING

This season's crops are harvested or in the harvesting, and many have begun their plans for a bigger and better product another year. The planning consists in a bit of serious thinking the evening before and more of serious work in tightening up the bolts and readjusting parts of the artillery of agriculture and laying plans for less of demand on the infantry. This kind of planning is in the air for it follows the precedent established overseas. Gen. Foch is saving his men and wasting thousands of tons of ammunition. The results are entirely satisfactory. The farmer must follow the same course and let gasoline do it.

The Liberty Fair's opening day, which is Discovery Day, October 12, was chosen some months ago before the management had any idea that President Wilson would name Discovery Day, or Liberty Fair Day, as a nation-wide Liberty Day. It is merely a coincidence and a most fortunate one for this fair from which so much is hoped.

Liberty Day will be observed in every hamlet from the Atlantic to the Pacific. We believe the day will be a holiday everywhere. It is a year and a half since America's entrance into the war, and those of us who were disappointed with the apparent deliberateness with which our troops were sent to the front now have reason to praise the wisdom of those who had direction of this greatest of all world wars. America is now striking triphammer blows through efficiency gained in 18 months of intensive training, which may prove fully equal to that of the Huns after 40 years of training. We believe the power of the blows of the Allies will be more apparent on Liberty Day than at this moment, and we predict America will be able to send up a most joyous shout on that day.

WALNUT PRICES

Walnut prices have been named that are satisfactory to the majority of the growers. A few have felt that a slightly higher price should have been made on Fancy Budded, which are 31½ cents. Number One Softshells, which cover by far the greatest percentage of the crop, are priced at 28 cents. While these prices may seem high to the consumer, when the old-time prices of nine, ten and eleven cents are considered, the walnut growers can still show that, nutritive value considered, they are within bounds of other foodstuffs. A still higher price may be secured for Franquettes, Eurekas, and other fancy varieties. These are sold on sample, and the price for the few of these high-grade nuts will be matter of barter and sale.

The walnut industry never was on the solid foundation it is today. To a large extent the prices which were named last Tuesday are the result of war conditions, but the quantity of the nuts and the general prosperity of the industry comes as the result of years of cooperative organization. At its beginning the walnut association was not strong in its working plan, but years of watchful care on the part of growers with the true cooperative spirit has made it one of the strongest organizations in California. It is at the same time the most democratic of organizations, both as to its dealings with consumers and its own members.

The output will total around 13,000 tons, and the state never grew a finer nut than the average of this year.

This Week's War Notes

The British have occupied Haifa and practically the entire seacoast of Palestine.

Secretary of War Baker has ruled that certain books written by David Starr Jordan and others are not proper reading for men in the army.

Questionnaires are returning to exemption boards, and the number of requests for exemption is surprisingly small. The call for the first quota will be made at once.

The German vice-chancellor, Von Hertling, has resigned and in accepting his resignation the kaiser does so with regret but "I desire that the German people shall cooperate more effectively than hitherto in deciding the fate of the Fatherland."

The Soviet troops are retiring from northern Russia. Moscow has admitted that the northern and eastern fronts find the Czecho-Slovaks advancing at every point. The Bolsheviki are in precipitate flight from the Allied troops advancing south from Archangel.

The fight against Spanish influenza has been taken up by various states and the nation. California camps are as yet entirely free from the dread disease. Many deaths have occurred in the East. Scientists have announced the discovery of an antitoxin which will control it.

The Fourth Liberty Loan drive started on Saturday. Some sections exceeded their quota on the first day. This was exceptional, however, and the greater number of communities find that a fight is before them to secure the full amount. Organization and methods of work are far more intensive than in any preceding campaign.

"Turkey is doomed" is the belief of all close observers of the war situation. Bulgaria's collapse has opened the way direct to Constantinople, and the Turkish army in Palestine is weakening every day. Forces totaling 10,000 surrendered on Sunday and Monday. Whether Gen. d'Esprey, the French commander chief of the Allied forces in Macedonia, will make his first drive toward Constantinople or on the Hungarian southwestern front remains to be seen. Presumably Constantinople will be mopped up first.

Many German supply bases are now endangered by the continual pressure on the western front. The old Hindenburg line is practically wiped out from the North Sea to Metz. American activities since the wiping out of the St. Mihiel salient have been confined to local actions and to strengthening the line captured. Farther north the French have made some bold maneuvers and have captured many important centers. The British and Belgians are hammering harder than ever in Flanders. All troops, however, are meeting stronger resistance on the part of the Teuton troops.

Bulgaria has surrendered. The drive on the Macedonian front continued until English, French, Italian, Serbian and Greek troops crossed the border into Bulgaria. The morale of the Bulgarians and of their Austrian and German helpers has been entirely destroyed. The final break came on Monday when after a conference in Saloniki the Bulgarians agreed to unconditional surrender. One stipulation of Sofia was that America should participate in final peace decision. Their territory is entirely under control of the Allies for marching through or any other use. The Bulgars lay down their arms which are to be under charge of Allied troops until final peace is declared. Absolutely no political or boundary questions were touched in the amistice.

After Many Years---A Fair in Los Angeles

A WAR-AID fair, and one which will be a factor in present world conditions is the aim of the management of the First California Liberty Fair which will be held in Los Angeles for 15 days beginning October 12.

When Lord Rhondda was told that America's surplus wheat of the crop of 1917 had all been shipped to the Allies, he wired to Hoover: "The war is lost." It was yet months until the next harvest, but Hoover knew the temper and the spirit of America, and he assured the Allies that American wheat would continue to come. The problem was passed back directly to the American people, and out of the half year's supply Americans' self denial netted 140,000,000 bushels of wheat. That wheat saved the Allies; it saved the war; it saved the world's liberties. So America has learned the power of conservation.

Then there is that other war aid, eually as important as conservation, greater production, and equally as nobly have American producers answered that appeal. Of course there have been some failures, but almost as one man the general farmer, the fruit grower, the live stock producer have been intensely patriotic. With every call to the colors, the labor situation has grown more and more strenuous, but the farmer and his wife and his daughters have worked harder and have turned to farm power and to every other means to increase production. This increase has been aided by the government through a wealth of information sent out in circulars and bulletins. State institutions and many large corporations have also aided in this campaign. The farm papers have done their share. And now come the demonstrations and fairs to add to the sum total of information and inspiration.

The state fair and some of the district fairs have passed. Spectacular features have not been entirely eliminated, but there has been a far more serious tone, and we have heard many an expression indicating determination to return to the farm and produce more and better than ever before.

Nearly two years ago the people of Los Angeles began the discussion of a 1917 Southern California fair. The point was made that it is a long distance to the state fair at Sacramento. In the city of Los Angeles is a fair ground on which sixth district fairs were held for many years. These were discontinued some 15 years ago and the grounds since have been maintained as an Exposition Park. On these grounds there have been maintained a fine mile racetrack with grandstand, a permanent state exposition building costing a quarter of a million dollars, a state armory, and another large fireproof building has been constructed by the County of Los Angeles. The discussions led to a determination to hold a fair in the fall of 1917 on these grounds, but almost at the very beginning of making the plans America entered the world war. The board of directors felt that every energy should be spent directly toward the war's ending, and the 1917 fair was called off. As the first year of the war passed and America's need for greater food production was realized, plans for a fair in 1918 were renewed and scores of Southern California's best workers have been busy for months completing plans for this event which will inspire many producers to greater and better production.

The armory will be occupied by a large exhibit of the United States government. Some features of this exhibit will have to do with agriculture, but primarily it will be an educational exhibit as to war's activities. This exhibit alone will attract thousands of people.

The state building on the grounds is being entirely overhauled, its permanent exhibit temporarily removed, and in it will be made exhibits of modern education as exemplified in our public schools and colleges and an exhibit of foods with especial reference to conservation.

The art gallery and museum will be given over almost entirely to fine arts.

In addition to these three great buildings, thousands of carpenters have been busy for some months building both permanent and temporary buildings. These buildings have been designed by F. B. Davison and Charles Wilson, both lifelong exposition men. These men have been at every exposition held in this country for the past 30 years. Their skill, with a very moderate expenditure, has resulted in a wonderfully beautiful exposition setting. We think no handsomer fair grounds have been provided for any fair in the West than those of the Liberty Fair in Los. Angeles. While of a temporary nature, these buildings have the happy faculty of looking as if they "belonged."

Permanent and Comfortable

Great grandstand in Exposition Park, Los Angeles, where the first Liberty Fair will be held, October 12-26.

The woodwork is all stained a brown or walnut shade; the panels are painted in buff; and the lattices and lighter features are painted sea green. Nothing will be permitted to have the ramshackle look so often seen in fairs. Even peanut stands must secure the approval of the architect.

The two largest of these buildings, one at either end of the permanent state building, are given up, the one on the west to agriculture and horticulture. Every inch of space in this building has been applied for; it contains over 15,000 square feet. A companion building at the eastern end of the permanent building, also having a capacity of 15,000 square feet, is given up to manufactures and liberal arts. A large number of other buildings, following the lines of those two referred to, but in size more like bungalows, are erected in various parts of the grounds. These are given over to forestry, fisheries and game, 3000 square feet; floriculture, 8000 square feet; University of California, 2000 square feet; and others of similar size are occupied by educational exhibits of the Red Cross, Y. M. C. A., Y. W. C. A. and other war work organizations.

Hundreds of stalls have been built in the live stock section. Every inch in these has been taken. As the fair covers two weeks, double use is to be made of the stalls by giving them up during the first week to poultry, pigeons and to horses; the second week to cattle, hogs, and sheep. The horse show during the first week is one great event, or rather, a series, and Dr. A. J. Scott, who is in charge, assures us that the events occurring on the dates, October 17, 18 and 19, will be long remembered by every lover of the horse.

In cattle, hogs and sheep C. R. Thomas began his work of securing exhibits at the International Live Stock show in Chicago last December. He has attended many other fairs, including our own state fair, and while the entries are now closed in this division, exact figures cannot be given as to the exact number, but they will exceed 1500 and may reach 2000. A big bunch of state fair champions will be exhibited.

One of the most striking exhibits at the fair will be that of the University of California. One exhibit which promises to prove of exceptional value at this period when labor is apt to prove so scarce, is that of power and farm implements, especially farm tractors. The site for this exhibit has now been changed for the third time. As demands for space chosen came in the first space was shown to be too limited. The location was then changed to the great lawn sloping down from the armory building. This in turn proved inadequate, and the great infield was taken. There will be no demonstration, but O. H.

Continued on Page 346

Fine Arts Building, Exposition Park, Los Angeles

This beautiful fire proof structure was built by the County of Los Angeles and houses wonderfully interesting exhibits of mastodons and prehistoric animals from the La Brea pitch beds, and in addition during the fair this building will have a wonderful exhibit of fine arts.

Agricultural News Notes of the Pacific Coast

Northern California

Rice growers are making war on ducks.

Tehama County's almond crop will be light.

An unprecedented run of salmon in the Sacramento River is reported.

This year's almond crop is practically one-fourth larger than last year.

Three hundred acres of castor beans are nearly ready for harvest in the Sutter tule basin.

Many new warehouses are being built in Butte County to accommodate the increased rice crop.

The Nevada County farm bureau held its second cattle auction at Lime Kiln Ranch, September 25.

Farm Adviser Amundsen of Placer County is advising farmers to do as much early plowing as possible.

One Placer County pear grower, Sidney L. Smith, reports harvesting 94 boxes of pears from two trees.

The early rains damaged so much alfalfa that it is probable the summer's high prices may be maintained.

A rancher of Chico has contracted anthrax from removing the hide from a steer that had died from that disease.

New local farm centers have been organized in Tehama County at Corning, Richfield, Oak Park, and Los Molinos.

Placer County farm bureau meetings; Applegate, October 4; Allen, 7; Weimer, 9; Butcher Ranch, 10; Forest Hill, 10.

The annual meeting of the Sutter County farm bureau has been postponed to November 8. It will be held at Sutter City.

Sacramento Valley pear growers are fearing the heavy rains may start growth on pears and result in serious spread of pear blight.

Amongst those who suffered from the recent rains were the fig growers. Butte County's loss is estimated at from 50 to 75 per cent, due largely to splits.

Because of the light rainfall of the past year some wells in the Sacramento Valley, never before dry, have failed to give sufficient for a full season's irrigation.

The star grape picker of the Women's Land Army is Miss Koski whose record is 105 50-pound boxes of Tokays in a nine hour day. She has been working at Lodi.

The Iron Canyon $30,000 irrigation project, which contemplates damming the Sacramento River at the mouth of Iron Canyon near Red Bluff, will soon be under way.

Earl Dobbs has been appointed farm adviser of Humboldt County to succeed A. H. Christiansen who has held the position since the first appointment to the office. Mr. Christiansen retires to take up private work.

Because of the damage done to grapes by the recent storm Horticultural Commissioner Brosius of Sacramento County has issued an order preventing shipments from the county until newly ripened grapes fit for shipment are produced.

A committee of barley growers has gone on to Washington to confer with the food administration and urge the development of overseas barley trade. It is stated that 750,000 tons of barmust be moved to make room for the ley stored in warehouses in this state rice crop.

Central California

Fresno district fair was held October 1 to 5.

Delta, Kern County, farmers are organizing an alfalfa growers' association.

Many grapes are rotting on the vines because of the continued wet weather.

Prune and Apricot Growers' Association will build a packing house at Los Gatos.

The California Peach Growers has decided to make a payment of eight cents to growers.

Fresno board of health is planning to give tuberculin test to all herds supplying milk to that city.

The government has purchased over 13,000 tons of California dried peaches and 61,000,000 pounds of prunes.

Raisin growers refer to Black Friday, September 13, as the day of $20,000,000 loss to California because of the storm.

John M. Bernstein and Dimmick Brothers of Hanford are shipping pure bred Poland-Chinas to Hacienda Chielian Ranch at Drujillo, Peru.

A gang of 16 firebugs, supposed to be I. W. W.'s, has been rounded up by police officials in Central California.

Kings County dairymen received for dairy products during the month of August a quarter of a million dollars.

The storm loss to the Santa Clara prunes will prevent shipment of entire amount contracted to war department.

Kern County farm centers are asking, and answering so far as possible: "How can we increase our crops for 1919?"

Early apple shipments from the Watsonville district were light, but it is now hoped that late apples will come up to an average crop.

The San Joaquin Valley live stock auction committee of the various county farm bureaus united in the auction sale plan are arranging for fall activities.

The bureau of markets of the U. S. D. A. is furnishing exceptionally valuable market information to raisin growers. A branch has been established at Fresno.

The saving of 40,000 tons of sugar, worth $4,000,000, is suggested as a possibility by proper handling of the wine grapes which war prohibition will prevent from being manufactured into wine.

Kings County creameries paid for butterfat for August: Lucern, 57 cents; L. A. Cry., 56½; Kings County, 56; Riverdale, 56; Central Cal., 56.85; Corcoran Sweet Cream, 58; Swift & Co., 56.65.

Kern County farm center meetings: Kern Delta, October 2; McFarland, 4; Weed Patch, 7; Wasco, 9; Rio Bravo, 10; Edison-Fairfax, 11; Delano, 14; Pond, 16; Rosedale, 18; Tehachapi, 21; Shafter, 23; Arvin, 25.

Dr. Geo. Gordon of Hanford has been appointed deputy state veterinarian. One of his first official acts will be the adoption of measures to control the outbreak of Texas fever tick, said to have occurred in Kings County.

The Tegner farm center of Merced County held its second successful auction sale of hogs last week. Fifty hog growers of Stanislaus and Merced Counties recently divided $11,000 because of a successful fat hog sale. The price paid was around $16.85.

Southern California

Rains have stopped bean threshing, but it is hoped that sunshine will prevent serious damage.

Southern California's walnut output will be close up to full crop. It is thought it may run between 13,000 and 14,000 tons.

One Ventura County bean farmer is employing 10 Land Army girls in piling beans. The girls are paid 35 cents an hour.

A Westminster, Orange County, farmer has invented a rake which cuts and piles beans without the necessity of using a fork.

Imperial Valley growers anticipate a great increase in cantaloupe output next year; it is possible 20,000 acres may be planted.

Ventura County's farm centers are discussing "Win-the-War" measures and especially how can Ventura make great crop increase for 1919.

All California has shipped over 21,000 cars of oranges since November 1, 1917, which is less than half last year's shipments to same date.

Horticultural Commissioner Brock of Ventura County is making persistent fight against mealy bug and has quarantined some sections where the infestation is worst.

The board of supervisors of Imperial County has appropriated $3000 toward the expense of a county exhibit at the Liberty Fair to be held in Los Angeles, October 12-26.

The Gardena Canning Company plant was closed for two days for technical violation of the food administration rule that fruit contracted for may not be purchased by another party.

The California Association of Dairy and Milk Inspectors will hold a meeting in Riverside, October 16 and 17. Dr. Maynard Rosenberger of Los Angeles is president and J. Kooke is secretary.

J. P. Dargitz, field representative of the Public Employment Bureau of California, in a recent speech before the Santa Ana chamber of commerce recommended: "Offer an idle man work and if he refuses arrest him."

Southern California has grown this year over 2000 acres of Mexican chili; last year's production was only 600. Sweet peppers also nearly doubled in production. The total grown in the southern end of the state of all kinds of peppers is 5300 acres.

Ventura County board of supervisors have appropriated $3200 for fire protection equipment. It is to consist of six two-wheel trailers of 1000 pounds capacity, carrying five two and a half gallon chemicals, ten gallon water cans, a couple of dozen of shovels, hoes, mattocks, etc.

Mexican almond harvesters at Banning, Riverside County, having gone on strike, the growers are employing Los Angeles women workers. It is estimated that community will produce 300 to 400 tons as against its 90 ton output of last year, and the prices are the highest ever.

Local meetings of Stanislaus farm bureau will be held at Jennings, October 2; Mt. View, 4; Hughson, 7; Mitchell, 8; 9, directors' meeting, Modesto; Thalheim, 9; Tegner, 11; Denair, 14; Hickman, 16; Fairview, 18; Orange Blossom, 19; Wood Colony, 21; Claus, 23; Ceres, 24; Patterson, 25.

The Coast and General

Utah reports its alfalfa seed crop as nearly all cut.

Clark County, Washington, has an unusually heavy prune crop.

The Isle of Pines Appeal reports new crop of grapefruit already going to market.

Utah's Jonathan apple crop is nearly all picked; it shows average yield and very high quality.

Idaho reports warm sunny weather very favorable to maturing late crops. Apple picking is general.

Farmers of Adams County, Washington, are cutting and stacking Russian thistle for stock feed.

California's corn crop is the largest ever, and it is producing exceptionally high grade corn meal.

One port of Cuba had on August 31, 800,000 bags sugar (325 pounds) ready for shipment as compared with 447,000 bags on same date 1917.

Washington reports hop picking as finished and evergreen blackberry picking as progressing but getting light output owing to drouth.

California recently shipped its first barley into Garfield County, Washington. That county's barley crop this year was almost a total failure.

The state penitentiary at Walla Walla, Washington, maintains a creamery and cheese factory. The product is all used in the state institution.

Bartlett pear growers of Hood River, Washington, find their fruit much larger than any preceding year. Some exceptionally big ones are tipping the scales at 20 ounces.

A critical feed situation confronting the live stock men of Oregon has made necessary the organization of a state feed committee which will work in connection with the Oregon agricultural college.

The cotton textile industry of Italy, which was becoming very important before the war, has been seriously affected by the shortage. The greater portion of her raw cotton came from the British East Indies.

The Northwest is making a strenuous "More Poultry" campaign. Poultrymen in Oregon propose to add at least 250 new members to the National Poultry Association. Prof. Jas. Dryden is leading the campaign.

The country's sweet potato crop this year will not exceed 81,000,000 bushels. This is smaller than that of last year by about 7,000,000. Alabama is the country's greatest sweet potato grower, with an output of 15,800,000 bushels.

Puyallup Valley, Washington, hop raisers will pick enough of their crop this year to fill existing contracts, at least. They are dubious about the future of the business, due to the approach of prohibition. The crop this year is as good as in 1917, when it totaled between 6000 and 7000 bales.

The Community Millers' Association of America has organized a novel greater wheat production drive, the members of the association vying with each other in securing pledge from wheat growers to produce more wheat in 1919 than any preceding year. The millers who secure the greatest increase of acreage by the campaign will have opportunity to win a portion of the $10,000 purse.

Preventing Forest Fires

By Arthur L. Dahl

THERE has been so much wanton destruction of the material things that contribute to the well-being of mankind during the war that we have almost lost our capacity to respond to the horror of it. We say it is the natural result of warfare and cannot be avoided. That is true of Europe where bitter warfare rages, but in this country we have a form of wanton destruction that goes on in the midst of peaceful pursuits. Every year millions of dollars worth of timber are destroyed and vast quantities of merchantable timber are devasted on our national forests through the carelessness of man.

It takes many years to grow a tree large enough to be of use, while it takes only a few hours to burn thousands of them, and thus add to the increasing shortage of lumber in this country. Fire is the great Hun enemy to the forest, and it is far more destructive than the ax of the lumberman, while no good comes from its visit, and the trees cut by the axeman are made to serve the purposes of civilization.

In creating an organization to fight the constant menace of fire, the government has utilized many of the modern methods of human warfare. There is an army of forest rangers which corresponds to the body of soldiers; there are vast systems of firebreaks, which are laid out as are the trenches on the battlefronts; the roads and trails constructed through the dense stands of timber, to make access to remote parts easy, are like the lines of communication maintained between the front and the supply depots; the telephone and the heliograph are used to connect the remotest ranger with headquarters, and finally, supplies of fire-fighting tools are stored in steel chests at different points in the forests ready for instant use if a fire occurs in that vicinity. Detail maps, showing the topography of the country, the location of all roads and trails, the places where rangers tools are stationed, and other valuable information are published by the government for use of the settlers and campers in national forests, and every possible effort is made to not only avoid the occurrence of fires but to subjugate them if they start.

A certain percentage of forest fires are caused by lightning, but the great majority are started by carelessness of man. An abandoned camp fire, a lighted match tossed into dry grass, a spark from the engine of a train, and dozens of other causes result in fires that sweep over thousands of acres, burning not only trees, but all forms of vegetable growth, the homes and fences of settlers, and everything else that is inflammable in the path of the flames. Where the fires are hot enough to produce chemical changes in the mineral substances of the top soil, that soil is rendered barren and unproductive, and all possibility of producing plant growth in the future is destroyed.

Time is a vital element in fighting fires. Just as a city fire department is organized to get to a conflagration as quickly as possible, so the forest rangers are trained to get to a fire as soon as possible. To enable them to do this, each ranger is assigned to a definite district, within which he lives and with which he becomes thoroughly familiar. Every road and trail, every stream and spring, and every dangerous spot is known to him; he circulates amongst the settlers, keeps in touch with campers and hunters, and in every way seeks to caution those he talks to against the careless use of fire, and in times of need he impresses into service the able-bodied men near the scene of the fire. Where men are not willing to volunteer their services, the rangers are authorized, under both federal and state laws, to compel men to assist. A definite appropriation is set aside by the government to compensate fire fighters.

Each ranger station is connected by telephone with the adjoining station and with the forest supervisor's office, and when a fire occurs, the first duty of the ranger is to notify the others. In high mountainous countries, various lookout stations are maintained on commanding peaks, and rangers detailed to occupy these stations constantly and watch for fires. Powerful field glasses are furnished, and various scientific instruments are at hand for determining the exact location of a fire seen through the glasses. When a fire is discovered by a lookout he immediately determines the angle as disclosed by his instruments, and then telephones to the next lookout station, where the ranger in charge uses his instruments to determine the angle of the fire from his point. By plotting these angles on a carefully prepared map kept for the purpose, it is possible to ascertain with remarkable accuracy the point where the fire is, and the rangers in that vicinity can be notified where to go without having to lose valuable time in searching it out. The heliograph is successfully used in California where bright sunny days are the rule in summer.

The ever present jitney is made use of to carry men and supplies to fires, and these machines are especially built to meet particular needs. On steep, narrow trails, horses or mules are used to carry tools, water and food for the fighters, and to avoid transporting tools for long distinces it has been the practice of the forest service to maintain at different points throughout the woods, steel or wooden tool chests in which are stored axes, shovels, mattocks and other fire-fighting tools. These chests are locked, but all rangers, and many nearby settlers are furnished with keys. The establishment of these tool chests has enabled the saving of a great deal of time in furnishing volunteers with tools, and each ranger always knows where he can find the tools he needs.

When the fire alarm is received by a ranger, he immediately notifies the forest supervisor, and then he starts for the fire, picking up as many men en route as he can. The forest supervisor then calls up the other rangers in that vicinity and instructs each just what to do. One man will be charged with securing sufficient food for the men, another will be sent to nearby towns to get additional men, and so on. If the fire is a big one, the supervisor goes in person and assumes charge of the fighting.

The Fire Patrol

This is a combination patrol and transport for tools and provisions and water, that is, so far as fire locations make possible for use of auto service.

Look-out Tower at Hopi Point, Arizona

This tower is near the Grand Canyon in Tusayan National Forest. The forest ranger is making his daily examination of forests lying within view of this watch tower.

Many national forests are located in those portions of the West which are dependent upon brush or chaparal-covered mountains for their water supply. This is particularly true of Southern California, where a large part of existing national forests contain no large bodies of timber, but are thickly grown over with chaparal. In the long, hot days of the dry season, when no rain falls, this brush cover becomes exceedingly dry and inflammable. When a fire starts on the steep side of a mountain, it is exceedingly difficult to extinguish, and it has been found very effective to construct systems of firebreaks at the base of the mountains or along the top ridges. These firebreaks are nothing more than cleared strips of land, from 50 to 100 feet wide, from which every vestige of vegetation is removed. By keeping this strip bare it is possible to stop a fire by compelling it to burn itself out for want of fuel when the cleared space is reached. It is also largely used as a base for "back-firing," which is one of the successful methods of fighting fires. This back-firing consists of starting another fire directly in the path of the big one, and by carefully controlling the back fire, compel it to burn the material ahead of the original blaze. When they meet, the surrounding ground is barren of unburned material, and the fire is conquered. Back-firing is dangerous, however, unless the men have a cleared base from which to work, as otherwise the new fire will get beyond control.

In constructing trails along the sides of steep mountains it is also a common custom to make such a trail act as a fire break. This is done by clearing the brush away along each side of the trail for a number of feet, thus stopping any fires which might start below it. Work on trails and firebreaks is usually done during the winter, or rainy season, when the men are not needed for patrol duty. To assist the government in this work, many water companies, supervisors and large land owners contribute sums of money for the employment of extra men to work under the direction of the forest rangers. In Southern California many hundreds of thousands of dollars have thus been spent in the construction of trails and firebreaks.

There are a number of methods used in fighting fires, the character of the topography and the local conditions governing the plan pursued. If running water is near, wet sacks are found effective in beating out ground fires, and in practically every case the efforts of the men are devoted to cutting away and removing the inflammable material in the vicinity of the fire. If a cleared place can be prepared, it is not difficult to beat out the flames with shovels.

The chief concern of the forest service, however, is to prevent fire. Every effort is made to educate the people frequenting the localities where fire danger exists, to the necessity of being careful. Hundreds of warning notices are printed on cloth posters and tacked to fences or trees along roads or trails, warning the people against throwing away lighted matches, or

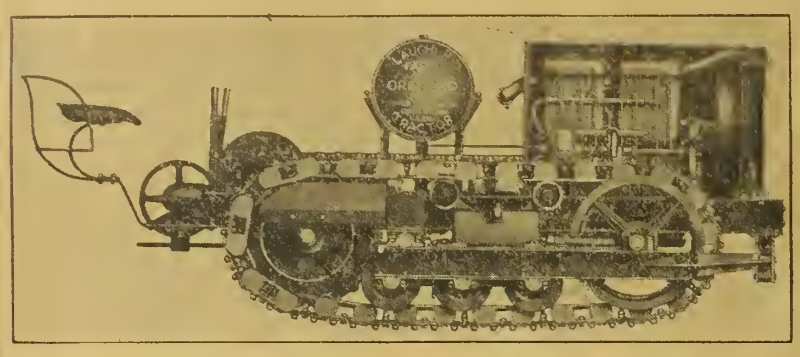
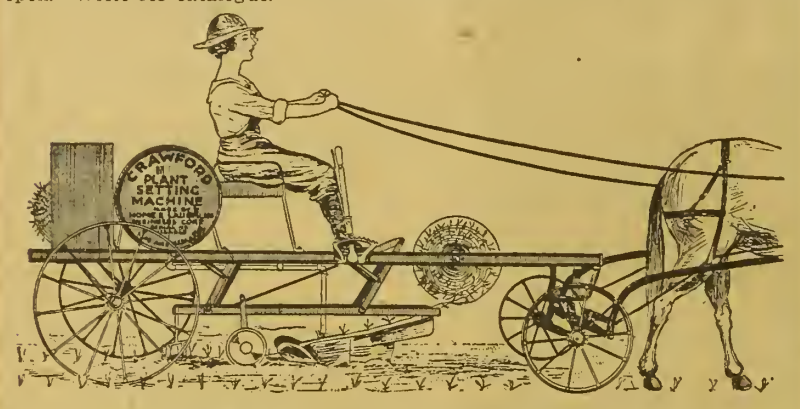
Get Territory on the
"Laughlin's Husky" Tractor



The "Little Husky" Tractor did all and more than was expected at the Tractor Demonstration Southern California now has its own creeping grip tractor made entire in Los Angeles factory. The car coupler type of crawler grip demonstrated its practicability in the rough, dry, hard ground and the pulling power of the engine was thoroughly demonstrated when it pulled two 12-inch P. & O. plows, doing thoroughly successful work. Sufficient sales have been made to take our output for 60 days. Purchasers should communicate with us at once to insure prompt delivery. Dealers are wanted. We have good territory still open. Write for catalogue.



The Crawford Transplanting Machine

The Crawford Transplanter excited the keenest interest at all times. This machine that does the work of 60 men in one day, operated by one person, was pronounced the greatest implement achievement of the year. Growers of onions, beets, cabbage, cauliflower and similar products should see and know about this wonderful labor saving machine.

Gum in Orange Groves

Written for California Cultivator By D. J. Whitney

THIS is not meant to be a scientific discussion of the subject of gum on orange trees, but merely some observations on certain causes of gum. And these will be given in connection with oranges on heavy soil, on which soil gum gives the most trouble.

The orange is a highly bred tree with certain freak habits. Lemons and grapefruit can be put in the same class. Of most importance in connection with gum seems to be the habit of the bark getting tight under certain conditions. Practically the same thing occurs with cherries which will gum if bad moisture conditions occur, causing dieback; cherry growers also split the bark on young, rapidly growing trees to keep the bark from getting tight.

In the orange tree the bark can tighten up and gum will be forced out (occasionally, not always) either by the soil pinching it badly, or because moisture becomes scant. A clay soil as it dries naturally will pinch the tree harder than a sandy soil, which is evidently one reason why gum is worse on heavy soil than on light. Also, poor culture will show its effects in gum quicker on heavy soil than on light. When a tree gets too dry the bark will tighten, then when it gets plenty of moisture the sap will rush through, as can be noticed by the numerous suckers frequently starting on a dry tree after an irrigation, and the surplus sap will issue as gum. As a matter of fact it is the combination of poor soil handling on heavy land and poor irrigation that seems to cause most of the trouble. A combination of good cultivation, with as little plow sole as possible, which will let the air and moisture get easily down into the soil and give the roots freedom to grow, along with proper irrigation does an immense amount in preventing gum.

It is commonly said that excess water causes gum. This is only partly so. On one orchard in this vicinity there is a good deal of gum trouble, but it will be found worse near the foot of the rows where the trees get a little less water than they should, if anything, than near the pipe line where on account of occasional leaks they get frequently more than is given in irrigation. If excess moisture were a leading cause the upper trees would have more gum than the rest of the orchard, where in fact they have less. In most places it will be found rather that the bark shrinks on the trees getting too dry, the clay soil on drying pinches the roots, the ground in cracking probably tears or breaks the bark on the roots, and both gum and mottle leaf are not far off. It is a combination of unsatisfactory cultivation and occasional drying.

Just why cutting out gummy bark will cure a case of gum disease, provided Bordeaux or other germ killing paint is applied to prevent its spread, it is hard to say, unless the cutting of the bark loosens the remainder of the bark and prevents it pinching, just as splitting the bark on a young cherry tree will probably prevent gum there. In any case the right method seems to be to cut away as little of the sound bark as is possible and to dress the wound with Bordeaux. However there is no intention here to discuss treatment.

There is once in a while a mistake made in thinking that gum from a sucker scar is gum disease. This is rarely the case. Clean, sound bark around the gum will show that the bark should not be interfered with.

No matter what the general cultivation and irrigation is like gum may be serious if heavy soil is permitted to cake around the trunk of the tree. A scraping out of the soil around the trunk and the filling in of a dozen shovelfuls of sand, once every two to four years, may be worth far more than a heavy fertilization if one or the other has to be dispensed with. A loosening of the soil at the trunk and a heavy dressing right there with gypsum to prevent the soil caking may be as good as sand or better where sand is scarce.

Aside from that a very important point in preventing gum—the starting point, on the basis that an ounce of prevention is worth a pound of cure—consists in a kind of cultivation that will let air and moisture get down easily, preventing also great surface evaporation and soil cracking, then irrigation which will let water get down deeply, frequently enough applied so that the trees will never suffer. This is a great thing in tree health in every way, and the most fundamental thing in causing vigorous growth, a good setting of fruit and getting that fruit to stay on and mature. Good cultivation and irrigation in every way is the starting point in citrus growing.

In this connection a few words about the puzzling problem of splits may be in order. The whole orange tree, roots, bark, leaves and shoots, is inclined to stop growing when moisture is scant; beginning a new growth when new moisture comes. Citrus fruits are more alive and growing on their own account than other fruits, that is, there seems to be in the fruit itself the substance, or energy, that causes growth. So when moisture is scant and growth stops, the fruits frequently act as if the skins decided to stop growing also; then when irrigation comes and the sap begins to flow in a hurry, the skin holds back its growth while the inside grows as it wants to and splitting starts. This is particularly noticeable, even in early summer, on those fruits which get a little dry and sunburned at the navel end. They are almost sure to split. even when fruits sunburned on the side will not split. This explanation of split oranges is only theory, but the prevention of it by uniform irrigation to prevent drying out of the soil is a good system under all conditions.

Condition of the Bean Crop

THE California bean crop has been materially shortened by the recent storm but the quality of the product has not been seriously impaired, according to a statement issued recently by G. A. Turner, president and manager of the California Bean Growers' Association, whose central headquarters are at Stockton. He says that after a more thorough canvass of the districts within the field of the association's activities, he is now in a position to report with a large degree of accuracy the actual damage and the condition of the bean crop at this date.

The association issued on August 15 a crop report to the effect that careful investigation showed that the bean outlook at that time was for a crop of from 80 per cent to 90 per cent of last year's production. The association now reports that as a result of the storms the 1918 crop will be at least 25 per cent less than was indicated in the August forecast.

Final reports from the Salinas district are particularly unfortunate and indicate a loss exceeding 40 per cent. The production of this district is almost entirely Small White beans.

Merced and Stanislaus Counties have escaped with slight damage; this is largely due to the fact that the crop was planted late and the nature of the soil is such that the rain was absorbed more rapidly than was the case in the more northern counties.

The reports from San Joaquin and Counties farther north in regard to Pinks are extremely discouraging; many fields have been killed outright. The loss of Pink beans is indicated as over 50 per cent and those that have survived have taken on a second growth which will materially delay harvesting and bring the crop into danger of frosts as well as into the period of rains.

Large Whites that were nearest maturity have suffered a curtailment in yield of approximately 25 per cent, although the quality of the crop is showing much less impairment than was feared. Samples of such Large

Whites as have been furnished since the storm are of surprisingly good quality, although showing some excess moisture. With favorable weather, this condition will not occasion any loss where care is taken not to pile the beans until they have had a chance to dry. Growers should be extremely careful in this respect. Anxiety to get beans under cover, growing out of the fear of another rainstorm, would result in beans being housed before thoroughly dry, and this practice is regarded by the association as being extremely hazardous.

Weather conditions for the last few days have been favorable, but the current reports of the weather bureau are disquieting. Even from Southern California telegraphic reports are coming in to the effect that an unexpected rainstorm has prevailed over a large area and it is obvious that if this continues the bean growers of the southern part of the state will suffer losses.

The indications are that prices of beans will be higher than they were last year but no figures are yet obtainable. It will be remembered that last year the government commandeered the White Beans on a basis of 11½ cents and it is not reasonable to imagine that this price was arbitrarily fixed. Reports from many careful growers develop the fact that up to date the increase in cost of production has been approximately 20 per cent over last year; if the government price was a fair price on the basis of their calculation for the 1917 crop, it is quite reasonable to expect that the price of the 1918 crop will advance in the same ratio as the cost of production has increased—especially in view of the decreased yield.

The bean grower has the world for his market and is not obliged to deliver his product to a small group of buyers who would have him at their mercy, and he will not be confronted with any necessity for selling his crop at a price so low that it would discourage him from again planting large acreages of beans.

"As we sense the bean situation," says Mr. Turner, "having in mind the principal territories of market production, we are firmly convinced that we need have no apprehension that the 1918 prices will be disastrous."

GAS MASKS—YOU CAN HELP

Every American has the chance for direct war service that will save the lives of soldiers. Carbon is needed to make millions of gas masks for the American army. Cocoanuts have furnished much of this material, but cocoanuts mean ships, and during the present shortage material for carbon must be found nearer home. The pits of apricots, peaches, prunes, olives, dates, cherries and plums and the shells of Brazil nuts, hickory nuts, walnuts and butternuts make carbon for masks that will outlast the most diabolical of the German gases.

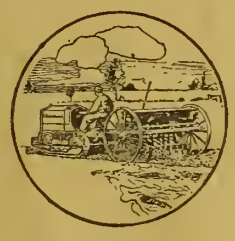
Here is work for all, every home, church and school. See that the work is started in your neighborhood. Place collection boxes in schools, churches, banks and stores, and above all in your own home so your boys and girls can see the pile grow. It takes 200 peach stones or seven pounds of nut shells to furnish carbon for a gas mask and save the life of an American soldier. How many masks can your neighborhood furnish?

Dry the pits and shells before turning them in to the nearest Red Cross chapter. This organization is in charge of collecting all material.

PRICE FOR WHEAT CROP OF 1919

By proclamation of September 2, 1918, the president defined his position regarding the guaranteed price for the 1919 wheat crop of the United States.

Briefly the 1918 prices at the primary points are to be continued as guaranteed prices for the 1919 wheat crop also, but in the spring of 1919 the president will appoint a disinterested commission to secure facts regarding farm labor, supplies and other cost factors in wheat production. From the report of the commission appointed, the president will determine whether there should be an increase over the present guarantee and if so what advance in order to maintain for the farmer a good return.



The Farm Labor Army *de*creases as the National Army *in*creases

In spite of the labor shortage *more* food must be produced—*more* acreage must be put under cultivation. *More* work must be done by *fewer* men.

There is just one solution,—machinery must fill the gaps in the ranks of farm labor.

Tractors must be used—thousands of them—tractors that will actually *do* the things you *want* a tractor to do—tractors that will work on practically *any* kind of ground—in *any* part of the country.

These are exacting demands but Cleveland tractors by the thousands are meeting them effectively.

They are producing food—in larger quantities than ever before—*and are consuming none of it.*

They are plowing 3½ miles an hour, eight to ten acres a day and under medium soil conditions are pulling two fourteen inch bottoms. This is equal to the work of three men and three good three-horse teams.

And the work is not only done faster but *better* with the Cleveland.

The Cleveland is an all-purpose tractor that does a wider range of work than is possible with other types. It is the tractor that works successfully on the side hill.

It plows, harrows, sows and reaps. It hauls, does grading and road work, cuts ensilage and does the hundred and one odd jobs which are always to be done about the farm.

It is tractor and stationary engine in one.

The Cleveland is built on the same principle as the giant battle "tanks." It crawls on its own tracks, laying them down and picking them up as it goes along. It will work practically anywhere—over rough ground, ditches and hummocks, close up to fence corners, and under small trees.

With 600 square inches of traction surface, it goes through sand, gravel, gumbo, mud and even wet clay. It travels over the newly plowed ground without packing the soil.

The Cleveland is only 96 inches long, 52 inches high and 50 inches wide. It can easily be operated by one man and can be housed in less space than is required for a single horse. It weighs less than 3200 pounds.

Yet in spite of its small size the Cleveland develops twelve horsepower at the drawbar and twenty at the pulley.

The Cleveland Tractor was designed by Rollin H. White, the well-known automotive engineer, and is built under his personal supervision. Only the best materials are used throughout. Tracks and gears are protected from dirt and dust, and the track sections are joined by hardened steel pins which have their bearings in hardened steel bushings.

Every farmer can fill up the gaps in the ranks of his farm labor *profitably*—can help the nation meet the food crisis *profitably*—by installing one or more Cleveland Tractors *now*.

Speed up *your* production. Make more money. Write us for complete information and the name of the nearest Cleveland dealer.

This Month in the Vegetable Garden

Northern California

Written for California Cultivator By A. R. Gould

THE early rains of last month were more than welcomed by the war gardener although they might not have been expected. Naturally some there were who professed to be ruined but everybody can't win and we venture to say that there are now a whole lot more busy in their gardens than there were before. The rains have proved a tonic, and if our observations are correct we shall get enough this coming season to save the day. Now is the time to make plans for the coming season's work. Uncle Sam has no use for slackers.

Soil Preparation and Manures

A general survey will be necessary, and we would advise those who have kept records of plantings to refer to these before arranging for next season's crops. Thorough cultivation is in every case of first importance. The effect of plowing and cultivation of the soil is to loosen the particles and mix them also to allow the air to enter and promote oxidation. It will make the soil more porous and more permeable to roots and allow the vegetable and mineral matter to decompose more rapidly and supply plant food. It is useless to expect large crops from worn-out soils, and is a mistake to think that you can keep on cropping land without wearing it out. After heavy cropping the land should be deeply trenched and manured and those soils which are sour should be treated with lime which is really a plant food in itself. Lime is an important constituent of all plants and is present in abundance in some soils but is deficient in others. In some, such as stiff heavy clay soils, lime has a very beneficial effect. Lime in its unslacked state is applied to vegetable soils containing deleterious vegetable acids and by its action it neutralizes the acids and forms useful compounds in the soil. Broken shells which are readily obtainable in our coast districts contain much lime. When applying lime it should be worked in near the surface and not trenched deeply as would be the case with other manures. Bonemeal, or crushed bones, has often been mentioned in these notes as a manure and it contains a considerable amount of phosphate of lime which has been taken by animals from the soil in their food Potash is another invaluable manure and is usually present in large quantities in the soil and after heavy cropping it is essential that this element should be put back. It is contained in large quantities in plants, and when decayed weeds or leaves are buried in the soil or if the ash of burnt plants is returned to the soil this valuable manure is supplied for a future plant food. Farmyard manure is really the most valuable that can be applied to the land as no other manure will have quite such a lasting effect. This includes the solid and fluid excrements of all animals kept on the farm. That from the poultry is much richer in nitrogen than that from the horse, cow, pig or sheep. The percentage ranges from 1.00 per cent to 1.75 per cent. It is also richer in ammonia and potash. Extreme care should be exercised in using this as if used too strong it will soon brown the plants.

Dehydration of Vegetables

This process of preserving vegetables has come to stay and we are greatly indebted to Mr. E. Clemens Horst for developing this method in our state, and it appears that the demand is now very great for this product and those who have grown more than they can store or consume may dispose of their vegetables to the dehydrating plant if it is within easy reach.

Carrots

It will be necessary to thin out the variety of Early Short Horn sown last month. Thin to at least four inches apart and later in the month keep the hoe busy between the rows. At the end of the month sow Danvers Halflong.

Beets

This crop, sown as advised last month, will also require thinning to six or eight inches apart.

Beans

The broad beans sown last month should now be in active growth and should be well cultivated between the rows. You may still make a sowing of these.

Cabbage

These winter cabbage which we advised sowing last month will about the middle of this month need transplanting to a fairly rich plot. Allow about 12 to 18 inches between the plants.

Lettuce

Transplant the variety Big Boston, sown last month to a well manured plot. These may be planted between young strawberry plants and advantage taken of the space, where these new plots are being established.

Tomatoes

The effect of the rains on this crop was to cause splitting of many of the matured fruits but should we be favored with mild weather there will still be fruits in abundance and a prolonged season.

Peas

The plots should be well prepared for this important crop and a sowing may be made of the early varieties such as Little Marvel and Alaska, the best dwarf types. Sow these about the end of the month in rows two to three feet apart sowing the seed very thinly and if the ground is not too moist soak the seeds in water for an hour or so before sowing.

Onions

Special care should be used in the preparation of this plot and it will be necessary to apply plenty of manure and have the ground well pulverized and the surface very firm and finely prepared. The early varieties Extra Early Pearl, Red and White Bermuda may be sown this month. Sow the seed very thinly in rows 18 to 20 inches apart.

Radish

Make a sowing of winter radish Chinese Rose Winter and Long Black Spanish. They will need a deep rich soil, and frequent cultivating between the rows.

Parsley

Another late sowing of this may be made. Sow moss curled or double curled.

Southern California

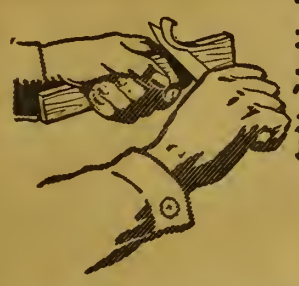
Written for California Cultivator By D. F. Reichard

OCTOBER is the ideal month for starting garden operations. Clean up the land. If it is a new place clear off the weeds and brush and burn them. If it is ground that has been cultivated or been in garden, clear up all matured crops, burning all the old vines and bushes that cannot be used as fodder. This reduces the liability of plant insects and diseases for the following year. After the land is cleaned up cover it with a heavy dressing of barn yard manure to be turned under after our first good soaking rain. If the rains do not come as early as are desired, thoroughly soak the plot by flooding or sprinkling. All this is preparation for early spring planting. It takes a couple of months for the straw and roughage of the manures to decay and become incorporated in the soil.

In growing gardens those planted during the last two months must be alternately irrigated and cultivated to keep the plants in continuous growth. Watch the plants closely for insects or disease. At the first sign of aphis spray thoroughly with Black

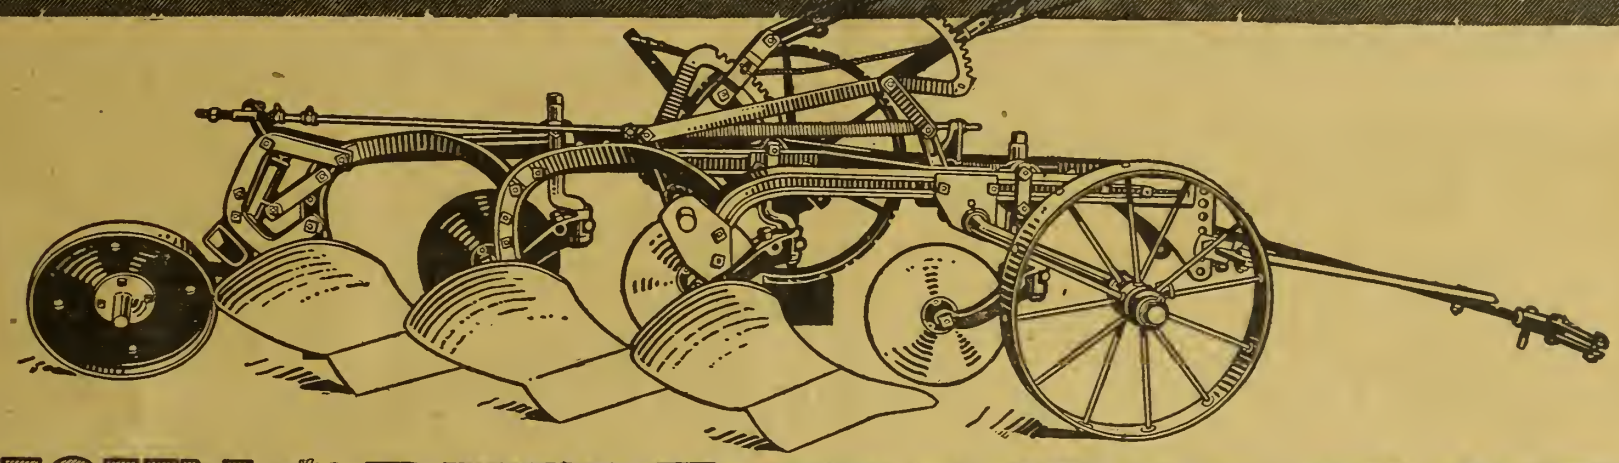
Leaf 40. With the appearance of eating insects, cabbage worms and the like apply an arsenic poison of some nature. For fungus troubles use Bordeau mixture.

At this time when the natural moisture is so completely out of the ground it is advisable to wet as large plots as possible at a time—the water does not evaporate so fast as when only small plots are wet. Cultivate as soon as the land will work without sticking



No Knife Is Better Than Its *Blade*

No Tractor Plowing Outfit Is Better Than Its *Plow*



JOHN DEERE TRACTOR PLOWS

Give Special Satisfaction To California Farmers

It takes special tractor plow construction to meet the requirements of plowing in California.

John Deere Tractor Plows, No. 5 and No. 6, have that construction.

The development of their special advantages was directed by men who had made a close study of California tractor plowing conditions.

They have fully proved their special ability in the hands of California farmers and fruit growers during the past year.

These John Deere Tractor Plows are controlled by the wheels at all times because the axles are rigidly fastened to the beams. The land wheel is set back balancing the weight of the plow over all of the wheels and insuring even depth of plowing in uneven ground. The plows get down to position quickly and ***stay in the ground*** while plowing.

The land wheel and front furrow wheel are set so as to permit plowing close up to trees or vines in throwing either to or from the row.

Both levers are out of the way of limbs while the plow is at work.

The power lift for these plows is the simplest and most dependable ever designed. No chains or sprockets to cause trouble. A powerful clutch engages positively and raises the bottoms high and level.

There is unusual clearance between mold board and beams for deep or trashy-land plowing.

These plows are exceptionally strong in every part. Beams are warranted not to bend or break. Beam braces have an extra long lap. Large bolts and lock washers hold all parts rigidly to place.

Besides the special design end extra strength that particularly adapts them for use in California, these plows carry the genuine John Deere bottoms, favored everywhere because of their wearing, scouring and pulverizing qualities.

Their John Deere Quick Detachable Shares save time and labor without sacrificing strength or close fit. Loosen one nut to take the share off. Tighten the same nut and the share is on tight.

The hitch on the No. 5 and No. 6 is adjustable—it adapts the plows for use with any standard tractor.

You can get the size to suit your tractor. The No. 5 plow is furnished in two and three-bottom sizes; the No. 6 in three and four-bottom sizes. Ten, 12 or 14 inch cut.

Ask your John Deere dealer to show you a John Deere No. 5 or No. 6 Tractor Plow. Investigate the special advantages these plows have to meet your needs. You will find them fully dependable for better and longer service in California fields, orchards or vineyards.

Get These Books

Write today for our free booklet describing fully the John Deere Light Tractor Plows. It has a message on tractor plow value that you will find profitable to you. Ask also for our big free book *"Better Farm Implements and How to Use Them."* Its 156 pages describe a full line of labor saving implements—(tells how to adjust and operate many of them). It is full of practical information that will help you. Put it in your library. Use it as a reference book. It will be worth dollars to you.

To get these books, mention the implements in which you are interested and ask for Package PT 12.

Fuel Record 1½ Gallons Kerosene Per Hour With a 24"to 26" Thresher

WATERLOO BOY

ORIGINAL KEROSENE TRACTOR

This tractor is a record breaker in fuel economy. It is the first tractor built in which cheap fuel was a part of the original design and construction. Our patented inbuilt manifold transforms kerosene into a powerful gas and insures its burning all the fuel—no waste.

"I threshed 18,000 bushels grain this summer with the Waterloo Boy Tractor. It required 15 gallons kerosene and about a quart of cylinder oil for a ten hour day." E. C. Haraldson, Hanley, Sask.

As Efficient in the Field as at the Belt

The Waterloo Boy has a record of pulling any load eight horses can pull. Its simple, powerful motor sends driving force into both the large, wide rear wheels which grip the ground firmly, pulling three 14 inch bottoms 7 inches to 8 inches deep, without packing the soil.

Working parts easily accessible, dust proof gears, automatic lubrication, reliable ignition, Hyatt Roller Bearings.

Write for our free illustrated catalog. It contains many photographic views showing the Waterloo Boy at work on farms, with letters from their owners, also full description of the tractor.

to one's tools. Always leave the surface with a fine mulch to reduce evaporation.

Beets, carrots, turnips, salsify and parsnips planted this month will be ready to harvest early next spring. Spinach, radishes and mustard will be ready for use in from two to three months planted at this time. Lettuce requires about four months to head well during the cooler months. Sow seed of cauliflower and cabbage now for mature heads during April and may. Setting the plants at this time will bring the crop in during February and March.

Sow the seed of early onions (flat varieties) transplanting in beds when they are one-eighth to one-quarter inch in diameter. It is too early to plant seed of the Globe varieties. For quick results plant onion sets. They will make green table onions in a couple of months or will make ripe large onions several weeks earlier than the seed.

Early varieties of peas, such as American Wonder, Laxtonian and Little Marvel, are most satisfactory planted at this time and will produce green pods in about three months. The table varieties are much longer coming in during the cool months.

The planting of any squashes, melons or corn is not advisable from this time till spring. On a warm frostless slope Canadian Wonder and Ventura Wonder beans may be planted with safety. In other locations do not take the risk. Other varieties of beans are not at all advisable on account of the susceptibility to cold and disease.

This Month in the Ornamental Garden

Southern California

Written for California Cultivator

PLANT narcissus, iris and all other spring flowering bulbs at once. Gladiolus, however, may be held till December or even later if desired. All iris which have grown themselves out of the ground should be broken up and replanted. Amaryllis belladonna are finishing their bloom and may now be divided and reset. The wonderful beauty of the bloom of these bulbs calls for more general planting.

Dahlias have shown a wonderful bloom this year. In colder sections they will become dormant later in the month and may then be taken up and stored for the winter. One should be sure to have correct labels on all plants before all bloom ceases. In warmer sections where bloom may continue for several months irrigation with liquid manure will result in wonderful increase of fall bloom.

Chrysanthemums are beginning to show bloom. This is the time to apply quick acting manures.

Pinks and carnations layered in July are now well rooted and may be reset.

One may plant this month most of the evergreen shrubs and conifers. Prune severely roses, especially those which are dormant from drouth. After pruning heavy application of fertilizer and water will give holiday season bloom.

The lawn is reasonably sure to look a bit ragged, especially where it has not been watered and fertilized during the later season. Rake out the devil grass, apply fertilizer and secure a growth of Blue grass before possible frost may have browned the Bermuda.

Northern California

Written for California Cultivator By A. R. Gould

DURING this month we shall find much to do in the ornamental garden, and the rains will also have prepared much of the ground for digging and planting. From now on many shrubs and trees may be required for extended planting and many evergreen shrubs may be secured from the nursery and planted toward the end of the present month. The ground should be well prepared for these and good sized holes dug and well manured as it is useless to expect any tree or shrub to grow unless given a good start, and the more care you use the better results you will have. It will be advisable to wait until the leaves are off before transplanting any deciduous trees or shrubs. Any tree newly planted should be well watered and the soil pressed very firmly around the roots. Lawns may need renovating and probably resowing and any which are not too weedy may be put into shape by the removal of the weeds and a sprinkling of white clover and Kentucky blue grass. A few weeks after the new grass has germinated a dressing of bonemeal and dried blood should be given. If an entirely new lawn is to be laid it will be necessary to spade the present one under, trenching it very deeply so that the weeds will not be again so troublesome. Never leave any roots of the dandelion near the surface as each small piece will grow. After the ground has been well prepared mix in the surface a dressing of bonemeal and dried blood, water it down and leave it for a few weeks, and if a few weeds should appear they may soon be removed before the grass is sown. You will require one pound of seed to 200 square feet of lawn. Rake the seed well in and distribute evenly over the area.

Annuals

Many of these will now be past their best and the cleaning up process will begin. Any subjects which are showing matured seed should be put on one side for the seed to be collected. Some subjects such as ageratum, calliopsis and petunias will no doubt have reseeded themselves in the beds where they have been growing, and if these small seedlings are put in boxes of soil and given protection during the winter, they will supply early bloom for next season. Violas and pansies being much hardier may be transplanted to well prepared beds until such time as they are needed for planting out to their respective quarters. Care and attention to such details as these will save time and trouble in resowing, and the climatic conditions in this state are most favorable to regeneration. Quite a number of subjects outside of the annual class regenerate themselves, as careful observation will show.

Bulbs

Those who contemplate planting choice varieties of tulips, hyacinths, etc., which are mainly imported, should put in their orders at once to their seedsmen, as this year, owing to the fact that imports from Holland have been restricted, there will be a shortage. Of course our own state can produce even these, but this industry is only just developing, as it were, and the supply is also rather limited. However in the case of narcissus and daffodils, these have been grown here for some few years in quantity, and they are equal to any imported. All of the above mentioned, and snowdrops, crocus and scilla, the bluebell, should be planted this month. See that the ground is manured and well cultivated. Those bulbs which were naturalized should not be disturbed. After the rains have become more frequent they will start into active growth and will give an early display. If a few choice flowers are required in the house, bulbs may be planted in pots. Three or four bulbs should be placed in a five inch pot of fairly rich soil. These must be plunged in sand or ashes for a few weeks to encourage root action. French ranunculus grow from the rhizomes or creeping roots, and they have a very wide range of colors. If you have never tried these you should this season plant a few. They should be planted two inches deep and four inches apart in fairly rich soil. Anemones are also useful for early flowers, and the same cultural methods will apply to these.

Perennials

These plants will have finished flowering. Most subjects and all the dead flower stalks should be cut off and either burnt or deeply buried. Many subjects, such as the Shasta daisy,, Michaelmas daisy, anchusa, phlox, campanula and gaillardia, will need dividing and replanting, and it is generally a good plan to rearrange the whole border, allowing plenty of room when replanting for future expansion. Erigeron speciosa is a perennial of great value as it produces its lavender flowers for many months during the summer and fall. The Heleniums are also a great acquisition to any garden.

Chrysanthemums

Those varieties producing late flowers will need frequent application of liquid manure. Soot water is also helpful. Keep on the watch for aphis or green fly and spray with nicotine, Black leaf 40.

SOUTHERN CALIFORNIA FAIR AT RIVERSIDE

A patriotic program of intense interest has been prepared for each day of the Southern California Fair at Riverside, October 8-12.

The complete program follows for the week's festivities at "the Exposition of the Southwest:"

Tuesday Aviation and Children's Day, all school children of Southern California admitted free. Opening of the grounds at 8 a. m. with all exhibits completed and everything in running order. At one o'clock a bevy of Homer pigeons will be liberated in front of the grandstand bearing a message from the management of the fair to President Wilson. This will officially open the fair. Races. Evening, vaudeville.

Wednesday, Army, Los Angeles and Riverside County Day. Morning—Inspection of the government war exhibits and agricultural displays. Arrival of excursion trains from Los Angeles with the naval reserve band. Afternoon—Race program. Music by the naval reserve band. Evening, presentation before the grandstand of a miniature army trench scene by the Y. M. C. A. men of March Field assisted by soldiers.

Thursday, Red Cross Indian Day, Livestock Day—Students of Sherman Institute will present a patriotic program. Livestock parade following meeting of the Citrus Belt Goat Association in goat department. Aeroplane maneuvers by soldiers of March field. Special features by the Red Cross workers in the patriotic tent. Evening—Red Cross and vaudeville features.

Friday, October 1/ Navy, Orange County, Palo Verde, Coachella Valley Day. United States navy band of San Pedro in patriotic concerts. Race program, vaudeville and aviation. Demonstration of the proper handling of bees by an expert working in a wire cage in front of the grandstand.

Liberty and San Bernardino County Day, grand celebration by all for victory in the war for Liberty. Race program. Football game, Whittier state school vs. Riverside Polytechnic high school; 14 mile relay between two teams of March field soldiers running from March field to finish in front of the grandstand at the fair grounds; vaudeville, aviation.

PERUVIAN INCREASES YIELD

A prominent grower of alfalfa reports that results obtained by alfalfa growers in several parts of the Southwest show an average of two and one-half more tons of alfalfa hay per acre per season where the seed known as the hairy Peruvian is used, than has been secured from the common types of alfalfa. Hairy Peruvian has been proved the hardiest type ever introduced in the West and it certainly has the longest producing season. The plant has a greater abundance of leaves than any other variety, a condition which creates a high feeding value.

After each cutting the plant recovers quickly, giving additional cuttings per season over other varieties. Few growers stop to think that seed is the least item of expense in the production of alfalfa. The farmer must always bear in mind that he is putting in a permanent crop which will continue to produce for years without reseeding. Therefore, to get the greatest returns on the money invested, the rancher should sow the variety of seed that will give him the greatest production.

RIGHT 'O

The Policeman—"Where are you going at this time of night?"

The Wanderer—"I'm—hic—goin' to a lecture."

With
Concrete
You build once Only —Think of That!

¶Fireproof, rotproof, ratproof, cycloneproof—no painting, no expensive upkeep, no insurance on the building—permanent.

¶*We must stop waste*—waste of money, waste of labor, waste of transportation. *We can do it with concrete.* The bulk of materials required can usually be obtained on the farm or near by. Home labor can do the work.

¶Granaries, silos fruit and vegetable storage cellars, corncribs, milk, hog and poultry houses, hotbeds, cisterns, feeding and watering troughs or tanks, barns, all kinds of floors and pavements—any necesssary building or improvement you can think of—is most economically made with concrete, for *with concrete you build once only.*

Cold weather need not stop you.

Write for Bulletin 115, which will tell you what you can do with concrete in your spare hours this fall and winter.

CONCRETE FOR PERMANENCE

W.S.S. WAR SAVINGS STAMPS ISSUED BY THE UNITED STATES GOVERNMENT

Full Power on Turns
Because of the Single Track

Will the tractor you buy turn in a 10-foot circle (5-foot radius) pulling as strong on the short turns as on the straight away—and will it do that without slipping one side or one wheel? That's of vital importance! Many tractors work well when pulling straight—it's on the turns that you get poor service from your tractor.

The Bean TrackPULL Tractor is the only small orchard-and-vineyard tractor made that delivers full power on short turns and it turns without slipping one side, pivoting, or doing anything else that a tractor shouldn't do.

Many tractors will turn themselves around all right, but the tractor you need whether in orchard, vineyard or field work, must take the tools around too and keep them at work all the way around. This requires full power on the turns.

This remarkable machine is built on patented FRONT-DRIVE principle—you steer with the single track which does all the pulling whichever way you go. You can turn within the same row (see illustration above) without lifting out the tools, making as short a turn as with a team!

Absolutely no other tractor acts so like a team while doing three times as much, is so handy, so efficient, so staunch, and so protected against overstrains!

You'll want the Bean TrackPULL eventually. Send coupon at once for catalog, complete description, and name of nearest demonstrating agent.

Don't buy a tractor that does less. Don't do without one that does so much.

Bean TrackPULL Tractor

New Features in 1919 Model

1. Motor—Improved oiling system; improved carburetor control, governor equipped.
2. Track Rollers—Provided with hardened steel thrust washers.
3. Drive Sprocket—Solid steel ring, machine cut, hardened and heat treated assures long service.
4. Bearings—Provided with improved dust-protected greasing facilities.
5. Rear Wheels—Provided with dust cap, wear-resisting bushings and improved greasing facilities.

Price advanced to $1445 Nov. 1st. By taking October delivery you will get the latest model with all 1919 improvements at the present price of $1340.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler
of the "Giant" Type
WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

Schmeiser Manufacturing Company
22 Mechanic St. Davis, Cal.

Manufacturers of

Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises, and Schmeiser Portable Automatic Hay Derrick. We sell the Martin Ditcher and Grader.

N. W. Thompson Imported and American Bred

Percheron, Belgian and Shire Stallions

My new shipment of Stallions has arrived consisting of Percherons, Belgians, and Shires personally selected by me from the best breeding sections of Iowa, Illinois and Indiana.

Two, three and four years old that weigh a ton and better. The heavy boned, clean legged kind with lots of style and action.

The largest collection of high class Stallions west of the Rocky Mountains.

Prize winners at this year's big Eastern shows. Life Insurance and State Certificate of Soundness furnished with every horse. If in need of a really high class Stallion come and inspect my horses or write for full particulars. I can suit you in price, quality, and terms.

Northern California Livestock Notes

Written for California Cultivator By W. S. Guilford

LESSONS FROM THE ORLAND FAIR

"WE COULD have exhibited better fruit than that—next year some of these blue ribbons will be won by our farms!"—and "I know we have a better pig than that blue ribbon winner. Why didn't we bring him?"—and more exclamations like these were heard at the recent Glenn County fair at Orland. And where there were two or three or four entries in many classes this year, next year there will undoubtedly be 15 or more entries in all of the principal fruit, grain and vegetable classes and in many of the live stock classes.

I know one exhibitor of hogs who showed animals in but two classes this year who has already made plans for fitting a full herd next season.

While this is an old farming section, in one way it is new as regards many kinds of intensive development, and nothing has done so much to bring about a realization of the crop producing possibilities of the section as this Glenn County fair.

Until products are brought together for comparison and display people do not appreciate how good they are, and until folks see the crops or exhibits that others have grown they do not realize how good are the things they have produced.

Until a fair is studied and the effect of the exhibits on exhibitors and visitors noted, one does not realize how important a factor a fair is, both in increasing quantity and quality of production.

THE RAIN

The rain of the second week of September and the close, muggy weather which followed was good for the maturing rice crop; it started feed everywhere and it made plowing possible. But it caused serious damage to dried fruit—on the dry yards and in the orchards and almost ruined the Smyrna fig crop in many orchards.

The soil was warm, and bur clover, barley, wild oats, weeds of all kinds and other sorts of winter growing crops came up almost over night. There has been enough rain to wet down into the ground sufficiently to insure an abundance of fall pasturage. Rice men would appreciate hot dry weather now, however, and it would be a big help in getting the balance of the prunes dried. The peaches were practically all off the dry yards before the rains.

The prunes on the orchards that were short of moisture and badly infested with red spider were pretty well off the trees, some on the trays but many on the ground. Some damage was done to these, especially those just put on the trays and not much dried. These moulded and made hog feed. Where trees had been irrigated and spider controlled a large percentage of the prunes were on the trees. Good drying weather is needed for saving these.

The Smyrna figs are a sorry sight. They have split and soured. The "vinegar fly" lays eggs in them and the maggots which hatch finish the work of destruction.

Some alfalfa has been sown. Conditions seem ideal for the fall planting of this crop. The warm, moist seedbed should give the plants a fine start before frosts come.

ANTHRAX

There is now prevailing one of the most serious outbreaks of anthrax that has ever occurred in the Sacramento Valley. Veterinarions have been busy night and day—and thousands of animals have been treated.

Anthrax, or charbon, sometimes called splenic fever, malignant pustule, and wool sorter's disease, is an infectious disease to which all warm blooded animals are susceptible. It is one of the oldest diseases known and occurs all over the world. Cattle, horses, mules, hogs, sheep and man are attacked most frequently. It is caused by a small parasitic plant, the anthrax bacillus, which grows in the blood. It usually enters the body in food or water, infected pastures that have been closely grazed being common sources. The bacillus remains dormant in the spore form in the soil for long periods, and animals are most apt to become infected when the grass is short and considerable dirt is taken into the system. It is possible for an animal to become infected through wounds or cuts as well as through the alimentary canal. This season it has also been spread by the big blood sucking horse flies which have been unusually numerous.

The anthrax bacilli multiply in the blood of an animal very rapidly and soon cause death. Frequently an animal apparently healthy at night will be found dead in the morning, apparently having just "keeled over." Frothy blood discharges from the nose and rectum are generally seen and the carcass bloats rapidly. In other cases there is swelling in the throat or groin and the animal is off feed and ailing for three or four days. High fever is present. Animals do not eat but drink much.

When a carcass is opened the blood is found to be brownish black in color and does not clot. The spleen has the consistency of blackberry jam. If an animal is suspected of having died of anthrax the postmortem examination should be made by a veterinarian. Carcasses of anthrax animals should be burned., This is most easily done by digging a trench along side the carcass, placing three or four iron bars or rails across it, rolling the carcass over on to these and above the pit, drenching the carcass with oil and building a big fire under it. It is a very difficult matter to burn an animal by building a fire over the carcass. One should be careful to destroy the frothy bloody excretions by shovelling them on to the fire with plenty of dirt or soaking with strong carbolic or other disinfectant.

The disease is most prevalent in summer and fall and in wet marshy pastures. With the coming of the rains it usually subsides. Treatment for the disease consists in giving the affected animals an injection under the skin of large doses of serum, a product prepared from the blood of horses that have been made hyperimmune against the disease.

When an outbreak occurs in a herd the animals apparently healthy are immunized against the disease by giving virus or spore vaccine, which consists of weakened but living spores of the disease along with the serum. The disease and the cure are put into the system at the same time, rendering the animal immune. This immunity is claimed to last only through the season.

Advice as to vaccinating or not vaccinating, based on the experience of this season, is varied. Some who have vaccinated before any visible outbreak occurred in the herd have lost animals and believe that if they had it to do over again they would wait until loss occurred before treating the balance of the herd. Others have waited until one or more animals have died, then vaccinated and prevented further loss. Others have waited until losses occurred, vaccinated and continued to lose some animals.

Many things can occur in treating animals on the average farm, where conveniences for handling and holding animals are poor, that make it difficult to get the best results. Animals are overheated by running around yards and corrals and frequently injured.

The concensus of opinion is that the only thing to do is to vaccinate animals in infected herds and in infected territory.

FRACTIONAL-POUND BUTTER SALES

The rule prohibiting manufacture or sale of butter in smaller units than pound prints has been amended to go into effect on January 1, 1919, instead of September 15, 1918. The extension of time will prevent the waste of supplies of printed paper and cartons already on hand. The rule is aimed chiefly at saving time and materials and when it goes into effect January 1, sale of quarter and half pound prints will be stopped. Retailers may, however, cut pound prints and sell any fraction demanded by the purchaser.

LIVE STOCK ON SUGAR-BEET FARMS

The stock utilize by-products of sugar-beet growing, the tops and pulp, and increase the growers' profits, and the nation needs more meat as well as sugar. Live stock on the sugar-beet farm constitutes an important factor in success of beet growing from two standpoints: The utilization of beet tops and pulp to the best advantage, and the production of stable or barnyard manure which can be used to enrich the soil.

Sugar-beet tops and pulp are good feed for many kinds of live stock, including chickens, hogs, sheep, cattle, and, to some extent, horses. Generally the tops and pulp are fed to sheep and cattle. They may be pastured off. The tops are left scattered over the ground and this method of feeding result in the ground being more or less trampled. Sheep especially are inclined to travel more generally in paths, thereby trampling the ground unevenly. In no case should the pasturing of the tops be permitted when the ground is wet, since the ground itself would be seriously injured by trampling in that condition and many of the tops would be wasted. While live stock thrives on beet tops and pulp, other feed must be used in finishing the animals for the market. Beet tops, especially the crowns, contain considerable mineral matter which is beneficial to live stock, but it should not be fed in too large quantities.

Aside from pasturing the tops they are sometimes allowed to cure partly and are then gathered into piles, hauled to the feed yard and fed in racks. This is a much more economical method than pasturing, but it involves the additional expense of gathering and hauling. The tops may also be used as ensilage. When chopped with straw, cornstalks, or other roughage excellent silage is produced. Both the tops and the pulp are excellent for dairy cows, since they act as a tonic upon the animals as well as a food and increase the flow of milk. Pulp is used either fresh or dried. It is dried artificially, either by itself or in combination with molasses. The object in drying the pulp is to make it easier to handle. About 80 per cent of the weight is lost in drying. The dried pulp should be soaked for several hours before it is fed to stock.

Animals can not be finished for the market on the beet by-products alone, and unless other feed is available it will not be advisable to purchase animals for feeding purposes with a view to turning them on the market later. If the farmer is provided with dairy cows, it is advisable to furnish them with one or two feeds of tops or pulp each day. The tops, when cured or pitted, will keep for several months; the pulp, when left in a large pile, will not spoil for feeding purposes, except in a thin layer on the surface. If the tops or the pulp are fed heavily to dairy cows, a distinct increase in the flow of milk marks the top and pulp feeding period, and there will generally be a distinct falling off in the flow of milk when ths feed is discontinued. If the supply of tops and pulp is limited, it is better to continue the feeding over a longer period, giving a smaller amount to each of the animals daily.

CATTLE SAVED FROM BLACKLEG

Dr. R. H. Williams, animal husbandman, of the University of Arizona, in an interview gives the following statement concerning the prevalence and control of blackleg in Arizona:

"Blackleg is widely spread over Arizona, and causes the loss of thousands of cattle annually. These losses may be absolutely prevented by vaccinating all cattle under two years of age. The vaccine should prove satisfactory if applied every six months until the animals are 18 months old.

"Range cattle are usually wild and handled with difficulty, so that it is considered more feasible to use a single treatment for vaccinating them.

"There are several companies preparing a special germ-free vaccine which renders the animals permanently immune. Treatment with this kind of vaccine costs from 35c to 50c a dose, but calves may be treated when they are as young as three months, and this renders them permanently immune the rest of their lives. Another advantage of this serum is that it gives the animals immediate protection from the time of application, and some claim that the serum may have curative value if given in the early stages of the disease.

"It is anticipated that most of the range stockmen will use this new serum. The losses caused by blackleg in Arizona are only second to that of starvation. There are possibly 30,000 head of young stock that die annually in Arizona from this disease alone, and the loss amounts to fully a million dollars a year. There is absolutely no need of sustaining this loss if stockmen will vaccinate their animals.

"Another important consideration in overcoming the blackleg is that of burning all the carcasses of animals that die of this disease. If carcasses are burnt the germs which cause the disease will be destroyed, and no doubt in time the germs will be exterminated.

POINTS IN SELECTING BREEDING EWES

One of the most important factors in starting the farm flock is to start right by selecting the proper kind of breeding ewes. Select ewes with good udders. The udders should be soft, pliable, and free from any hard knots. "Good solid mouths" should be selected. Ewes with part of their teeth gone, or the "nippers" loose or badly worn must have special care and attention. Select ewes that are in good general health and thrift. Avoid the extremely thin, emaciated ewes, but do not go to the other extreme and select the fat ewes. Fat ewes too frequently are not regular breeders, and carry their flesh because they have not raised a lamb the previous season. Look for good fleece, that is, one of good length and strength, also densely covering the body. Look for ewes of good size, and of a blocky mutton conformation. These are the important points as seen by Howard Hackedorn of the University of Missouri college of agriculture.

Breeding ewes can be bought at any of the stockyard markets from now until late in the fall.

Plant an acre for the shell hounded farmers of "No Man's Land."

LARGER MILK DEMAND FOLLOWS PROHIBITION

Increased demand for milk following curtailment of brewing in the United States is a probable development in the nation's food situation during the coming year. In a recent conference with food administration officials at Washington, R. C. Reed, secretary of the Michigan Milk Producers' Association, presented facts of unusual interest to all dairymen. Since last May when Detroit became dry consumption of milk, according to Mr. Reed, increased 20 per cent and of buttermilk about 50 per cent. To satisfy this sudden demand it became necessary to bring in milk from greater distances and to a considerable extent utilize the supply formerly made into cheese.

Not only has consumption of milk increased in private homes but many saloons have been converted into lunch rooms and ice cream parlors. These establishments have become new outlets for milk and its numerous products. The large increase in buttermilk consumption is explained

How the packer is saving millions out of waste

—and how this results in higher cattle prices for the stockman

The development of by-products out of waste means a saving of about one hundred and fifty million dollars annually—a sum sufficient to keep New York's six million people supplied with meat for six months.

THERE was a time when the steer was handled solely for its edible meat, its hide, and its tallow.

The remainder of the animal, in weight totaling many millions of pounds annually, was thrown away—a sheer waste.

Today virtually all of this former waste is utilized. Over 250 articles are now contributed by the steer to human needs, and a larger proportion of the animal is saved for human food.

At the time of writing $135 is, on the average, the price paid for the average beef animal to the stockman by Swift & Company.

But if the old order of waste still prevailed and only the hide and tallow were saved, Swift & Company would be obliged either to pay not more than $125 to the stockman, or to charge the public higher meat prices.

Thus, you see, by-product utilization results in a saving of about $10 per animal—a saving which, when multiplied by the total number of cattle dressed annually by Swift & Company, over two million, amounts to more than twenty million dollars annually. This saving goes to the stockman in higher cattle prices and to the consumer in lower meat prices.

If applied to the entire number of cattle dressed annually in America, approximately fifteen million, this saving would amount to about one hundred and fifty million dollars annually.

The real development of by-products came with the development of the larger packing organizations.

Success was attained not easily, but by patient effort, by exhaustive experiment, by intense specialization. It has been a big job and has called for big methods—a job far beyond the resources of the old, unorganized system of local meat dressing.

Not only are the by-products saved but their value has been increased through better handling of hides, fats, and other edible portions of the steer.

Swift & Company is glad to have had a part in this development. It is an achievement of thrift—an achievement that has made possible today lower meat prices to the consumer and higher prices to the producer of cattle than would have been possible under the old methods.

Swift & Company, U. S. A.

A nation-wide organization owned by more than 22,000 stockholders

We Have Been Telling You

that PRINCE RIVERSIDE WALKER is siring a mighty fine lot of calves in our herd, and prospective buyers who have come to look at his young sons have agreed with us for we have sold right down to calves all the time.

Now we have some expert opinion on the young sons and daughters of "Prince," in the form of awards at the recent California State Fair in the hot competition of the younger classes. Sons and daughters of PRINCE RIVERSIDE WALKER were placed as follows by Judge Scribner:

First Junior Bull Calf.
Fifth Junior Bull Calf.
Reserve Junior Champion Bull.
Second Senior Heifer Calf.
Fifth Senior Heifer Calf.
Reserve Junior Champion Heifer.
First Prize Breeders Young Herd contained some of his daughters.
Second Prize Calf Herd.
First Prize Produce of Dam, won by his twin sons.

Hadn't you better consider one of his young sons to head your herd, securing a rare combination of breeding and type?

Our Entire Herd is Tuberculin Tested

P. S.—Our junior herd sire, King Korndyke Pontiac 20th, was a second in class at the State Fair to the bull that was again made grand champion.

by its mild acidity, which seems to allay the alcoholic craving.

While the Detroit percentages should not be considered an exact index to future conditions in other cities, they emphasize the present importance of dairy products in the world food program. Curtailment in the supply of alcoholic beverages and similar drinks may be expected to stimulate demand for milk to a very material degree.

Time for Filling Silo

"The time to fill the silo is near at hand" says R. W. Clark, of the Colorado agricultural college. "The farmer, in filling his silo, needs labor and the townsmen can help in this respect. Every dollar that the silo makes will be spent with the business people of the nearest town. If labor cannot be had our silos will not be filled. This was the case last year, let it not happen again this year.

"Two years ago one silo in eastern Colorado made its owner $1500. It enabled him to keep his cattle, otherwise he would have had to sell them at sacrifice prices. In another case a farmer, by filling his silo, was able to keep all his livestock and support his family comfortably through the winter. He said it would have been necessary for him to have sold his livestock and left home to support his wife and children had it not been for the silo. We ought to have a silo on every farm, but as we have not, let us do the next best thing and fill every one that we do have.

Making Silage

"When to fill—Cut corn in natural stage before leaves dry. Cut kaffir and sorghum when seeds turn color and leaves are still green.

"How to fill—Cut feed in short pieces. Grind the cutter knives sharp. Mix leaves, stalks, and ears thoroughly. Tramp solidly, especially at edge. Add water if it is dry feed."

C. A. Briggs

Another of the Cultivator's faithful workers who soons goes overseas. He may land in the trenches but if he does it will be as a dispenser of soup and coffee to the boys who are doing the fighting. In other words, Mr. Briggs is going into the Y. M. C. A. service, which means any work which makes for more fit fighters.

Cottonseed Meal---Cottonseed Feed

Cottonseed meal contains more protein, the chief food constituent of cotton seed, and less fiber than does cottonseed feed. Cottonseed meal is generally recognized as a product of the cotton seed only, composed principally of the kernel with such portions of the hull as is necessary in the manufacture of oil, and as containing at least 36 per cent protein. Cottonseed feed, which may more properly be labeled, "cottonseed meal and hulls," is generally recognized as a mixture of cottonseed meal and cottonseed hulls, containing less than 36 per cent protein. If to cottonseed meal, as defined above, cottonseed hulls are added, the mixture can not be labeled as cottonseed meal, under the terms of the federal food and drugs act and the food laws of many states.

Buyers should distinguish carefully between cottonseed meal and cottonseed feed, according to officials of the bureau of chemistry, United States department of agriculture. While cot-

tonseed feed containing a reasonable quantity of cottonseed meal is a good feed, the hulls have very low feeding value as compared with the meal. The mixture having less food value should sell for a less price than cottonseed meal. Buyers in many instances, failing to distinguish between cottonseed meal and cottonseed feed have paid as much, or nearly as much, for the feed as for the meal. This has been the case especially when the manufacturer of cottonseed feed has sold it under the designation, "cottonseed feed meal."

WANING HORSEPOWER ON FRENCH FARMS

After the present harvest is gathered, French farms are to be almost stripped of horses suitable for military purposes. The requisitioning of horses has already caused farmers a great deal of hardship, and although this measure is necessary to supply the army it is being done with the greatest consideration possible.

Farmers possessing only one horse are not to be deprived of their animals. Requisitioning committees have been instructed also to take only a certain proportion of the animals of others, and most of the horses selected are not to be removed from farms until after the crops are gathered.

The rapidly decreasing animal power of France will demand still greater human efforts of the war-weary populations, and especially of the women and crippled men who are now operating most of the farms. Such conditions emphasize the need for throwing the full military and agricultural strength of America into the war to win it as quickly as possible.

STABILIZING COTTONSEED MEAL

In spite of the lower yield of cotton and the increased cost of production, the organized cottonseed producers have agreed with the food administration to stabilize the price of cottonseed at the average price of last year. This is a concession on their part to the cattle feeding and dairy interests in this country. The prices will vary from $64 to $72 per ton in carload lots, f. o. b., cars, depending upon the yield in oil.

Differentials have been fixed for crushing seed on the basis of last year's cost and regulated profit of last year, plus the increased cost imposed by change in labor, transportation and supplies. As a result the price of meal is about $3.00 per ton higher than last year.

The food administration feels satisfied that stabilization of this industry by voluntary agreements of all concerned will greatly eliminate speculation and all interests will be protected. Details of the seed prices assessed to local zones and yields will be issued by the federal food administration.

KEEP POISONED GRAIN AWAY FROM STOCK

Again the price of carelessness has been paid. In this case it is in the loss of seven horses which fed from a sack of poisoned grain. The parties in question who have suffered this loss are the Amabile Brothers of Volta, Merced County. It seems they purchased a sack of poisoned barley for ground squirrel eradication and while they went to dinner the horses helped themselves. Despite the prompt services of a competent veterinarian, it was impossible to save them.

Manufacture and sale of prints of butter weighing less than one pound prohibited. On and after September 15, 1918, no licensee shall manufacture or sell units of butter in print form that weigh less than one pound; provided, that this rule shall not prevent a retailer from cutting a unit weighing one pound or more and selling a portion thereof to a customer.

The Southern California fair to be held at Riverside will offer occasion for the first Duroc-Jersey futurity. Two hundred and fifty dollars in prizes will be offered.

Reports on butter market in San Francisco will soon be made by the United States bureau of markets.

When a man is selfish he shows himself a poor judge of men.

Insure Big Results!

Plant Germain's Hairy Peruvian Alfalfa Seed!

Wideawake ranchers are buying *Germain's* reliable, *proven* seed now.

Hundreds of orders remained unfilled last year, due to the tremendous demand. Our supply is limited—very little seed has been produced—and the demand this season will be greater than ever.

Hay prices are soaring. It is up to every rancher to make his field produce to the utmost.

We successfully introduced this wonderful type of seed in this section. And we stand solidly back of it. We guarantee it to be the true Hairy Peruvian strain. To insure perfect results we advise you to buy only the special Germain variety.

Place your orders now and avoid disappointment. Special folder containing testimonials, upon request. When you write, please mention this magazine.

CAUTION—For your protection Germain's Hairy Peruvian Alfalfa Seed is sold ONLY in sealed and stenciled bags.

Some Real Herd Bulls in the Second Modesto Sale

Modesto, California
Thursday, October 17, 1918

65 REGISTERED HOLSTEINS 65

CONTRIBUTORS:

BRIDGFORD COMPANY, Knightsen.
LUTHER THOMPSON, Modesto.
J. S. GIBSON CO., Williams.
C. G. OUTLAND, Modesto
R. L. HOLMES, Modesto.
J. M. CAMPBELL, Escalon.

HUBBAVALE ARTIS TWISK NETHERLAND, C. G. Outland's herd sire. He is by a son of Artis Pontiac Winana out of a 31.32 pound daughter of Lord Netherland De Kol, and is out of a 30.27 pound daughter of Aaggie Cornucopia 3d's Count. He is a choice individual, and there are several of his young sons and daughters, as well as a fine lot of cows and heifers bred to him in this sale. He would not be for sale were it not for the fact that Mr. Outland is making a complete dispersal of his herd, having sold his farm.

SIR CHIMACUM WAYNE WOODCREST, who is by Sir Chimacum Wayne, son of Chimacum Wayne Boone, highest yearly record daughter of Sir Veeman Hengerveld, and out of Chimacum Maud, who made 624.8 pounds milk and 29.81 pounds butter in seven days as a junior three-year old last year. She is a splendid candidate for a 35 pound record at next freshening. The three nearest dams of Sir Chimacum Wayne Woodcrest average 643.3 pounds milk and 29.98 pounds butter in seven days, while his dam's dam and sire's dam average 24,036.9 pounds milk and 1047.44 pounds butter in one year. He is a show bull and will make someone a high class herd sire.

KING SEGIS ABBEKERK SARCASTIC, out of Chimacum Maud, same as preceding bull. He is sired by King Segis Alcartra Abbekerk, who is by the $50,000 bull King Segis Pontiac Alcartra and out of a 30.27 pound four year old daughter of Tidy Abbekerk Prince. He is good enough to head a high class herd, and don't forget that his dam is due to freshen again on December 15 this year as a four year old, and is one of the best prospects in the state for a very high record.

SEGIS PONTIAC DE KOL BURKE WALKER, sired by Segis Pontiac De Kol Burke, son of the former world's record cow Riverside Sadie De Kol Burke, and sire of the state record heifer Aralia De Kol Pontiac Mead, who made 932.34 pounds butter in one year as a senior two year old, 34.39 pounds butter in seven days and 138.09 pounds in 30 days as a senior three year old. His dam is Charlotte Walker 2nd, 25.05 pounds butter in seven days, and she is a three-quarters sister to Prince Gelsche Walker, whose daughters hold state and world's records. This is a splendidly bred young bull, bred in the most popular blood lines and he belongs at the head of a good herd.

CHIEF MODESTO WALKER who is by Prince Hiske Walker, full brother to the former state record junior four year old, Lady Hiske Walker, and out of Senorita Ceres Mechthilde, the cow that topped the Modesto Sale last spring. He was fifth prize senior bull calf at this year's state fair, and the judge remarked that he had as much quality as any bull in the class.

SEGIS ABBEKERK AAGGIE FAYNE, who is by King Segis Alcartra Abbekerk, son of the $50,000 bull King Segis Pontiac Alcartra and a 30 pound four year old daughter of Tidy Abbekerk Prince. His dam is a 21.97 pound three year old, due to freshen December 22 as a four year old, and is considered by the Bridgford Company one of their best prospects for a 30 pound record.

THE FEMALES

include more high record cows, daughters of high record sires and dams, and cows and heifers bred to 29, 30 and 40 pound sires, than have been sold before in one sale in the San Joaquin Valley. Among them: A 27.86 pound show cow; a 23.06 pound senior four year old; a 25 pound cow; a 24 pound cow; a 20 pound cow with over 600 pounds butter in one year; a 25 pound cow with over 800 pound butter in one year; A HEIFER WHOSE FOUR NEAREST DAMS AVERAGE 33.80 POUNDS BUTTER IN SEVEN DAYS; A DAUGHTER OF PRINCE GELSCHE WALKER; and an excellent lot of young cows, some with good records, heifers in calf to high record bulls, and a few heifer calves sired by the 30 pound bull Hubbavale Artis Twisk Netherland.

You Should Find What You Want In This Sale

Every animal guaranteed to be a breeder; every animal over six months of age tuberculin tested and sold subject to tuberculin retest by the purchaser.

Field Notes from the Live Stock Men

Young and Clark, Lodi, report sales of Poland-Chinas. Boar pig to Jas. H. Bell, Maxwell; boar pig to H. H. Windmiller, Elk Grove; a junior boar pig for herd sire to J. W. Wakefield, Acampo; senior boar pig to American Sugar Beet Company, Chino; junior boar pig to Thos. Piercell, Meridlan.

W. A. Young of Young and Clark, Poland-China breeders at Lodi, states that he is negotiating with Iowa breeders for a number of fine sows of the same blood lines as those of his champion and grand champion stock.

J. E. Thorp, Lockeford, reports sales of Jersey cattle. Yearling heifer to E. F. Smith, Haywards; yearling heifer to Martha Michaelson, Isleton; heifer calf to D. T. A. Tapely, Marysville; senior yearling bull to Lee Bleekmore, Lakeport, and also a Duroc Jersey boar to the J. S. Gibson Company, Williams. Mr. Thorp won a whole flock of cups at the state fair at Sacramento and the Glenn County fair at Orland, California Jersey Breeders' Association cup at Sacramento for the best five Jersey cows in milk, Butte City Ranch cup for the best Duroc Jersey exhibit at Glenn County fair, L. H. Linbarger's special sweepstakes over all breeds of swine at the same fair, Bank of Orland cup for best dairy cow same fair and the National Duroc Jersey Record Association's cup for best litter of pigs farrowed since March 1. This was awarded at Sacramento. Mr. Thorp plans to show at Fresno, Riverside, Los Angeles and San Francisco.

N. W. Thompson, Patterson, has just got in a shipment of quality stallions selected from the best of the Eastern stock, 18 Percherons and four fine blocky Belgians. Mr. Thompson finds the supply of good horses in practically an exhausted condition and he had to travel over several states before finding animals measuring up to his exacting requirements. None but good ones were brought out in his shipment.

The Redwoods Ayrshire Farm, at La Honda, San Mateo County, reports that they have the good fortune to get three heifers from Ada Rome of Willowoak, one of their registered purebred Ayrshire cows. Willowmoor Robin Hood 32d is the father of the triplets. All the calves are well marked, perfectly formed and living.

E. B. McFarland's Aryshires will be shown at the fairs at Fresno, Riverside, Los Angeles, San Francisco.

Elmer Lamb, Ceres, reports sales of Duroc-Jerseys: Boars to Geo. Wingfield, Reno, Nevada; boar to Spreckels Sugar Company, Kings City; boar to Ford Ranch, San Francisco; boar and sow to Dave Rogers, Razelle; bred sow to H. K. Nourse, Walnut Creek; sow to Stanton K. Helsley, Ceres; sow to L. G. Weld, Lancaster; sow to Charles Silva, Sacramento; boar to P. N. Olsen, Turlock; boar to G. F. Stephenson, Merced; sow to John Harder, Montpelier.

H. I. Marsh, Modesto, reports sales of Poland-Chinas: Boar to L. Erlandson, Turlock; boar to C. C. Brown, Durham; two boars to Miller & Lux, Dos Palos; boar to J. H. Kile, Thornton; two boars to Franks & Miller, Antioch; boar to W. F. Cordes, Stockton; boar to Shelton B. Hunter; Bradley; nine boars to Jos. F. Lahaney, San Francisco; boar to E. H. Smith, Los Angeles; bred gilt to D. & H. Rowles, Modesto; bred gilt to J. H. Kendal, Modesto.

W. A. Young, Lodi, plans to root out 20 acres of wine grapes and put it into alfalfa, adding to his herd of Poland-China swine and also starting in the registered Holstein business with a small select herd.

A notable state fair Poland-China sale was that of the entire show herd of Hale I. Marsh to Fred Hartsook of Lankershim. Mr. Marsh will show them at Fresno. Mr. Hartsook will show them at Riverside, Los Angeles and San Francisco.

Eye Diseases Affecting Cattle

A recent report of serious eye diseases of cattle in Texas and New Mexico was published, which has also created some uneasiness on the part of cattlemen in Arizona.

Prof. W. S. Cunningham, assistant animal husbandman of the University of Arizona, has been consulted by a number of stockmen recently, and he makes the following public statement:

"There is a disease affecting the eyes of cattle prevalent in the southern part of the state. There have been many reports of this among range cattle and dairy herds. This disease is called 'infectious keratitis,' or 'pink eye of cattle,' and has been present every summer for several years in certain localities of Arizona. It affects cattle of all ages, but mainly young cattle during the summer, when pollen is present, and it is infectious or contagious.

"The symptoms of the disease are a watery discharge from the eyes, the eyelids become swollen and red, and are held partly closed to shut out the sunlight, a red spot appears in about the center of the eye which later turns white or yellowish white in color, and the entire colored portion of the eye becomes clouded or whitish in appearance. The pupil of the eye may bulge out to a considerable degree because of the eye lens being swollen. In some cases this swelling is so great that the eyeball may burst and cause permanent blindness. All cattle affected with this disease are temporarily, partially or totally blind, but they regain their eyesight in most cases. It usually takes several weeks to effect a cure, and during that time vigorous treatments should be applied.

"For those who cannot conveniently consult or call a veterinarian the following remedies are given: First wash out the eyes well with a saturated solution of boric acid, then twice each day place into the eye four or five drops of a 20 per cent solution of argyrol. This treatment should be kept up persistently until recovery.

"The above treatment, if followed carefully, will cure practically all cases of the disease."

Profits From Raising Percherons

By E. J. Barber

It isn't always the big breeder who is the most successful raising purebred draft horses. The man with a large number of animals oftentimes isn't able to give them the proper care and consequently doesn't get the results he should. I know that I have made more money per dollar invested than most of the big breeders. I have never owned more than one pure bred mare because I am a small farmer. In fact, I have only four work horses on the place. Here is a very good illustration though of what a good pure bred mare can do as compared to a grade mare of equal merit as an individual. Both are grays, about the same age, size, conformation and temperament. In fact, I always work them together. One couldn't tell which was the pure bred by looking at them. Neither of the mares has missed having colts for several years. I always breed them to the same stallion. I was foolish not to have two pedigreed Percheron mares instead of one. Kanitie 89818 (97444) an eight year old imported mare, has had five colts and is safe in foal again to the grand champion stallion, Ildefonse at the 1913 International. One filly I sold as a yearling for $500; a weanling filly brought $250; a stallion weanling brought $300 and her 1917 stud colt I cashed in for $300 at weaning time. This makes a total of $1350, which is considerably more than I paid for the mare in the first place. Her 1918 colt, I think, is clearly the best colt she has ever raised and I feel positive that I will have no trouble in getting $350 for him at six months

DR. HESS Instant Louse Killer Kills Lice

For Use On Your Poultry

Seize the hen and dust Instant Louse Killer into the feathers. The handy sifting-top can makes it convenient to use. Sprinkle it in the nests, on the roosts and floors. Put Instant Louse Killer in the dust bath occasionally—your hens will do the rest. This means louse prevention.

FOR STOCK

With one hand stroke the hair the wrong way, with the other sift in the Louse Killer. Especially good for lousy colts.

GUARANTEED. The dealer will refund your money if it does not do as claimed.

1 lb. 30c, 2½ lbs. 60c (*except in Canada*)

The Kind of Bull that Pays

Here is a Real Bull for someone

Hiske Senorita 232084

Born March 9, 1917. He is mostly white in color, a fine straight individual, ready for service.
His sire: PRINCE HISKE WALKER, who is by Prince Gelsche Walker and out of Hiske of Riverside, 711.57 pounds butter in one year, who is by Juliana King of Riverside. He is full brother to Lady Hiske Walker, 34.25 pounds butter in seven days as a junior four year old, state record in class when made.
His dam: SENORITA CIRUELA MECHTHILDE 3D, 707.31 pounds butter in one year as a senior three year old. She has seven day records of 25.78 pounds butter from 535.2 pounds milk. She is a big, strong, light colored cow of great dairy capacity. She was fourth in class at this year's California State Fair, and won the butter fat contest over all breeds.
Put HISKE SENORITA at the head of your herd if you want type, production, high per cent of butter fat, and light color. Write for price or come and see him for yourself.

of age. The mare's work has fully paid for her feed.

The grade mare, bred to the same stallions, has raised good colts but I never could get more than a fourth as much for her colts at weaning time, and sometimes I had to carry them until they were yearlings and two year olds. I have never had to keep purebreds that long. I would have been far ahead now if this grade mare had been a registered animal even if she had cost me a thousand dollars.

STATE FAIR DAIRY PRODUCTS EXHIBITS

In giving list of winnings and scoring of milk, cream, etc. at the California state fair, by error we omitted entirely Class 136, Section 1611, Certified Milk. Some exceptionally high scores were made by milk in that class, and we regret that we did not get them in their proper place in the list in last week's Cultivator.

The scores were:

Class 136, Sec. 1611. Certified Milk.
1. University of California, Berkeley, 97.7.
2. Adohr Stock Farm, Van Nuys, 97.6.
3. Hollow Hill, Colton, 96.7.

The University of California received complimentary scoring but was not a competitor in this class, and it will be noted that Adohr Stock Farm of Van Nuys was the first real winner and scored only one-tenth of one per cent under the university.

PROGRESS OF COTTAGE CHEESE CAMPAIGN

Over 580,000 pounds of cottage cheese has been made and consumed in homes as a result of the campaign to increase the making and consumption of cottage cheese of good quality undertaken last spring by the dairy division. Educational work has been done in 40 states, largely through the instrumentality of the women home demonstration agents. Over 2000 meetings and demonstrations have been held before 100,000 people. As a result 41,499 persons have been encouraged to take up the manufacture of cottage cheese. Not only has the manufacturing end been demonstrated, but uses in cookery have also been explained. The campaign, the results of which will continue to spread, has shown the people of the United States a means of utilizing skim milk in the home and creamery in the preparation of a valuable food.

DROUTH FEED FOR STOCK

An emergency drouth time feed for Southwestern stockmen which has previously been overlooked is the desert shrub locally known as soapweed. Its scientific name is yucca. While this plant is not high in nutritive value nor suitable for feed until it has been properly ground, it has been found that in seasons of drouth when range grasses and other sources of feed fail, it can be used to save cattle and sheep from starving. By the addition of a little cottonseed meal with ground yucca a fairly well balanced ration is made.

Because the food material is found mainly in the tree-like trunks it is necessary that they be ground or chopped finely before stock can eat them.

The machines used for cutting yucca have heavy cylinders carrying teeth or knives that rotate before a chopping block to which the plants are fed. One of the large machines run by a 12 or 14 horse power engine with a crew of three men will chop or shred about two tons of soapweed an hour.

WHAT SILAGE IS WORTH AS A FEED

One hundred sixty-five pounds of corn silage will replace 145 pounds of shelled corn and 359 pounds of hay in producing 100 pounds of beef. These figures were arrived at as a result of eight years of feeding tests made at the Indiana experiment station, according to advices recently received at Minnesota University farm. Counting clover hay at $15 a ton, and corn at $1 a bushel, silage is worth $9.22 a ton. With corn at $1.25, silage is worth $10.21 a ton; and with corn at $1.75 silage is worth $12.50 a ton.

Cow with Eye Punctured

I have a cow that had an eye slightly punctured. Where the eyeball was punctured it is turning white or pus is forming. What can be done for it? Please give full directions.—Subscriber, Downey.

If only the front cavity of the eye is punctured you may be able to save it but if the second cavity is broken into the lens is probably dislocated and the sight permanently destroyed. Bathe the eye carefully twice a day with a warm solution of borax. Use a large tablespoon of borax to a pint of water. Use surgeon's cotton for a sponge and wipe out as much of the pus as you can. Then soak some of the cotton in the solution and bind it over the eye. Cover this with a black cloth to keep out all light. In a few days you will know if it will recover. If it improves keep her in a darkened place until the inflammation has subsided so the light will not irritate it. If the injured place turns red and rolls out you had better have the eye removed; then it will not give her any more trouble. If the eye was punctured with something that broke off and left a piece in the eye there is little hope of it ever recovering even if the substance be removed. Either borax or boracic acid may be used as there is practically no difference in the effect. The removal of an eye is not a difficult operation but should be done by those who know the anatomy of the parts and have operated some.

HELP TO HALT HOG-CHOLERA RAVAGES

Farmers should insist that all the stock hogs which they purchase for feeding purposes should be properly vaccinated by competent and conscientious veterinarians in order to prevent the spread of hog cholera. Unlike the larger stockyards of the country, which are properly protected by qualified government representatives, many of the smaller local yards are entirely without safeguards against cholera.

Immature hogs go from the farms of origin mainly because of lack of feed or on account of disease. The purchaser who buys such sick hogs on the market for feeding purposes usually introduces disease into his home herd. To stimulate production and to conserve our available pork supply none but vaccinated, immunized, healthy hogs should be maintained in the feed lot. If the farmer wishes to aid efficiently in halting the Hun, he should help increase our hog supply by routing disease.

AUCTION SALE OF DUROCS

Dr. L. J. Belknap announces an auction sale of Durocs to take place at Garden City Sanitarium, inside city, San Jose, October 2, 1:00 o'clock, a herd of 50 head of the best blood money could buy, Orion Cherry King and Cols, one of the best boars of the breed, 800 pound yearling. Several 400 and 500 pound yearling brood sows, gilts, boars and weanlings. All life immune from cholera.

A FAIR IN LOS ANGELES

Continued from Page 331

Stevens, president of the Tractor and Implement Dealers Association of Southern California, and committeemen who have been working hard for the great exhibit, say there will be one great time in tractor and implement row.

The fair is to be thoroughly educational even as to its sports. There is to be kite flying by school children, swimming contests, competitive drills by various organizations, drills by soldiers and sailors pageants and fireworks. Fifteen hundred marines are staged to be present.

The officers of the Association are R. W. Pridham, president; E. W. Murphy, first vice-president; F. B. Davison, secretary; R. W. Burnham, treasurer. Directors: R. W. Pridham, E. C. Belows, Fred H. Bixby, R. W. Burnham, Volney H. Craig, Marco Hellman, E. G. Judah, W. P. Storey, E. W. Murphy, C. E. Miller, A. J. Scott, Frank Simpson, Dell A. Schweitzer.

Program

Saturday, October 12. Opening Day. Fair to be opened by the Governor. Numerous speakers during the afternoon. Harness and Horse Racing from 1 to 5:30 P. M. Fireworks 8 to 9 P. M.

Sunday, October 13. Army and Navy Day. Swimming Contests, 2 to 3:30 P. M. Army and Navy Drills and Sports 3 to 5 P. M.

Monday, October 14. Liberty Fair Labor Day. Horse racing 1 to 5:30 P. M. Fireworks, 8 to 8:45 P. M. Boxing bouts to be participated in by members of different Training Camps.

Tuesday, October 15. Championship Lawn Tennis to be participated in by

PREVENTING FOREST FIRES

Continued from Page 333

making camp fires in the midst of dry grass. During the dry season, persons are even prohibited from making camp fires except in certain localities approved by the rangers, where there is no danger of sparks igniting the surrounding grass. The rangers as they travel back and forth over the trails of their district, talk to campers, asking them to be careful and impressing upon them the necessity for extinguishing fires before leaving them, etc. In the valleys, where settlers wish to burn off their fields after a harvest, the state laws require that a permit must first be secured from a ranger or state fire warden, and if he considers that the time is not propitious for such burning, by reason of wind conditions or other causes, permission is denied. The local magistrates cooperate with the federal and state authorities in inflicting heavy fines for violating the fire laws.

Like poverty and some other evils that have been with mankind since the beginning of history, we will probably always have forest fires, but each year, as funds wil permit and as experience guides the way, the government is advancing in the work of fire prevention, and if all of our citizens who have occasion to go into the timbered, or brush-covered regions of our Great West, will be thoughtful in their handling of fire and use ordinary precautions to prevent the starting of even the slightest blaze, the great loss of material and money due to our annual forest fires will be enormously reduced and perhaps entirely avoided.

Did A "Business" Dentist Fill Your Teeth?

If a *low priced* (?) "business" dentist filled your teeth, you will appreciate why the Dental measure **should not pass.**

Amendment No. 21 would permit "operators" with little experience from other States to practise in California **without an examination.**

The California Dental laws are **very strict** now, and the **high standard** must be maintained.

The present law admits all competent dentists.

Low priced **incompetent** dentistry is always the **dearest** in the end.

Keep out the **riff-raff** from other States.

Vote NO ON AMENDMENT **No. 21**

Joint Committee, California Dental Associations.

Correct Lubrication for the "L"-Head Type Engine

This, the "L"-Head type of automobile engine, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude*

"Proven Entirely Satisfactory"

Only perfect satisfaction can account for the use of ZEROLENE by the majority of automobile owners.

Leading coast distributors also testify that it is "a most satisfactory motor oil."

They know from the records of their service departments—and we know from exhaustive tests—that Zerolene, correctly refined from selected California asphalt-base crude, gives perfect lubrication with least carbon deposit. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations.

California citrus soils are extremely deficient in limes, sulphates. Amboy Gypsum furnishes these—makes available other necessary elements. Increases crop yield. GYPSUM BOOKLET FREE. CONSOLIDATED PAC. CEMENT PLASTER CO., 614 San Fernando Bldg., Los Angeles.

Combating Weevils in Stored Seed

THE serious losses caused by bean and pea weevils, which amounts to millions of dollars annually, are largely preventable, and by putting a stop to them a valuable and much needed source of the nation's food supply can be saved. No satisfactory artificial remedies can be applied to kill weevil grubs in beans, peas or cowpeas growing in the field, but they can be easily and effectively controlled afterwards, if the necessary care is given, by methods described in a new publication of the United States department of agriculture, by E. A. Back and A. B. Duckett. The crop should be harvested as soon as possible after maturity, according to the bulletin, and the seeds threshed or shelled and treated by fumigation, heat or cold storage in order to kill the weevils in them before they can increase in numbers and carry on their destructive work.

Harvest All Seed

In gathering the crop exercise care to leave no portion of it in the field, as seeds scattered on the ground or left in shattered pods on the dried vines may carry the pest over winter and furnish a supply of weevils the following summer. The crop should be harvested as soon as possible after reaching maturity and the seed threshed or shelled soon afterwards. Storing in the pod does not confine the weevils. Immediately on placing the seed in storage, fumigate with carbon disulphid or carbon tetrachlorid. These chemicals when exposed to the air vaporize into a heavy poisonous gas which immediately kills the weevil. Carbon disulphid is the more generally used though carbon tetrachlorid has the advantage of not being inflammable. Seed to be fumigated should be placed in an air tight container, such as a tin can, barrel or bin. The chemicals, used at the rate of from two to four pounds to each 500 cubic feet of space to be fumigated, should be poured over the top of the seed and fumigation should continue for from 24 to 48 hours. As weevils breed generation after generation in stored seeds, the seeds should be watched to make sure that they do not become reinfected. In such case fumigation should be repeated.

Killing by Heating

When there is only a small quantity of seed the weevil may be killed by heating the seed in the oven for several hours. The oven should not be hotter than 120 to 145 degrees F. Dipping seed in boiling water for one minute is also an effective remedy. Weevils will not feed or cause damage at low temperatures, and if seed can be kept in cold storage at a temperature of 32 to 43 degrees F. no trouble from this pest will result. Seeds once treated should be stored in rooms free from adult weevils, or placed in tight barrels or sacks made of closely woven material, and should be examined occasionally as a guard against subsequent infestation.

American and German Finances

Pessimistic Americans who view with alarm our increasing national obligations may derive a great deal of comfort from a comparison of the financial condition of the United States contrasted with that of Germany.

The total resources of the United States are estimated at about $250,000,000,000; our annual earnings are estimated at about $50,000,000,000. Our national debt, including the third liberty loan, may be put around $12,000,000,000.

Before the war our government was spending about $1,000,000,000 a year. When the war is ended, interest charges, less the interest collected from our loans to our allies, government insurance expenses, and other necessary expenditures growing out of the war may conservatively be estimated at something like $1,000,000,000. We are confronted, therefore when peace comes, with raising only a couple of billions a year revenue, a slight task for a nation of such tremendous wealth, capacity, and resources.

The resources of Germany before the war were estimated to be $80,000,000,000. The annual expenditures then of the imperial government were about $800,000,000. Her debt now is $30,000,000,000, and her resources and man power have been severely impaired. After the war she is confronted with additional expenditures growing out of the war totaling some $4,000,000,000.

The interest of her war debt, even if the debt grows no larger, will be about $1,500,000,000. Although she is niggardly in her pensions to private soldiers and their families, $1,000,000,000 a year would hardly suffice to pay even small pensions to her injured and the families of her soldiers who have been killed. Her war debt must be paid some time and a sinking fund of 5 per cent would add $1,500,000,000 to her annual taxation. Here is a total increase of $4,000,000,000 all due to the war.

Of course both the United States and Germany may greatly increase their debts, but the increase will not change the relative situations.

The German government has drained the German people of their gold, even their jewels and heirlooms, and yet the Imperial Bank of Germany now has but little over $500,000,000 of gold in its vaults. The United States has made no special effort to obtain gold, has made no call upon the people for the precious metal, and yet today has in its treasury vaults practically $2,500,000,000 of gold coin and bullion.

SOME HOME CANNING DIFFICULTIES AND HOW TO AVOID THEM

By O. H. Benson

Canned corn and peas (as well as beans and asparagus) may show no signs of spoilage and still when opened have a sour taste and a disagreeable odor. This specific trouble is known to the canner as "flat-sour,"

Since 1902

Pomona DUPLEX-PLUNGER Pumps

One Pump Will Do Your Work

Used with great economy on lifts of 50 to 700 feet, and for boosts 300 feet above the surface.

and can be avoided if the canner will use fresh product; that is, one which has not been gathered more than five or six hours, and will blanch, cold-dip, and pack one jar of product at a time, and place each jar in the canner as it is packed. The first jars in will not be affected by the extra cooking When the steam pressure canner is used the jars or cans may be placed in the retort and the cover placed in position but not clamped down until the retort is filled. Rapid cooling of the product prevents overcooking, clarifies the liquid, and preserves the shape and texture.

Corn seems to give the most trouble, but with a little care and study this product may be canned as easily as any other grown in the garden. A little experience in selecting the ear and ability to recognize corn that is just between the milk and the dough stage are important. Blanch not longer than five minutes and then cold dip (for which purpose a plunge in cold water is sufficient). Cut the corn from the cob with a sharp knife and put it at once into sterilized jars. As the corn expands a little in processing the jars should not be filled quite full. Best results can be accomplished when two persons cut and one person fills. If it is necessary for one person to work alone, cut off sufficient corn to fill one jar, pour on boiling water, add salt, place the rubber and the cap in position, and put the jar at once into the canner. A little overcooking does not injure the quality of canned corn. Corn that has a cheesy appearance after canning had reached the dough stage before being packed. Corn should never be allowed to remain in the cold dip, and large quantities should not be dipped at one time unless sufficient help is available to handle the product quickly. Water logged or soaked corn indicates slow and improper packing.

When peas are keeping well but the liquid shows a cloudy or hazy appearance, it indicates that the product was roughly handled in blanching and cold dipping, or that split or broken peas were not removed before packing. When peas are too old and blanching is not carefully done the skins crack and the liquid becomes cloudy. Some waters of peculiar mineral content have a tendency to increase cloudiness.

U. S. BUREAU OF MARKETS MAY BE GIVEN JURISDICTION OVER QUALITY OF PRODUCE

State Horticultural Commissioner Hecke writes that from information recently received at his office, there is in the present agricultural legislation now before Congress a measure to permit inspectors of the United States bureau of markets to pass upon the quality of produce which may be subject to dispute between shippers and commission men. Under the present arrangement, federal inspectors report only on the condition of the produce in question. The far-reaching effect which this extension of the powers of the men will have in correcting the shortcomings of unscrupulous shippers is well understood and greatly appreciated by the bulk of the fruit men of California. In a number of cases the majority have suffered for the sins of the few. Perhaps the general effect which such an extension of power will have is not generally understood. However, when we understand that reports of federal inspectors are accepted in courts as prima facie evidence before the law, we may appreciate their true significance.

DON'T PUT ANT PASTE ON LIVE BARK

J. R. Moeller of Los Angeles has had an experience in applying ant paste to fig trees and killing the trees, which makes a word of warning from him valuable. He says that a couple of years ago his fig trees were seriously infested with ants, and in order to keep all the fruits from being injured he drew a band of ant paste about the trunk of the tree, smearing directly on the bark. The bark later turned dark brown and ultimately died. All trees so treated were killed.

This experiment was tried only on fig trees, and what the effect would have been on others is only conjectural, but plainly this remedy should be used with caution. It would probably be safe to use cardboard, or other nonabsorbing substance, on which the paste might be smeared and do equally as good work with the ants. In any case don't smear ant paste on trees until one has carefully experimented.

LIBERTY LOAN INTEREST RATE

Secretary McAdoo has definitely announced that the Fourth Liberty Loan bonds will bear 4¼ per cent interest.

The secretary has been insistent that the government interest rate should be stabilized at 4¼ per cent. He points out that a raise in the rate of interest of only one-fourth of one per cent on $10,000,000,000 of government bonds would mean an annual increase of $25,000,000 in interest charges, and that this money would have to be raised by increased taxation and paid by the people of the country. It would not be paid by one class only, because there are consumption as well as other kinds of taxes, and the consumption taxes reach every class of people.

"As an intelligent people," said Secretary McAdoo during the Third Liberty Loan campaign, "we should now make a stand for the financing of our government during the period of this war at a stabilized rate of interest, say at 4¼ per cent per annum, so that all business and all investments may be adjusted to that basis, and so that we ourselves may protect ourselves against successively increased rates of interest on government loans."

Neither our patriotism nor our support of the Liberty Loans are measured in fractions of per cent.

AMERICAN-EGYPTIAN COTTON A SUCCESS

The establishing of the American-Egyptian cotton industry in the irrigated valleys of the Southwest is assured, according to the United States department of agriculture, if present demands are maintained, prices remain near the present level, and if labor is available to harvest the large crops which have been planted.

War demands have had much to do with the recent phenomenal growth, much of the product being taken for special automobile tires, and for airplane and balloon fabrics.

The industry was started in the Salt River Valley of Arizona, and has since spread to the Yuma reclamation project in California and Arizona, the Gila Valley of Arizona, and the Imperial, Palo Verde, and San Joaquin Valleys of California. The crop has increased in value from $44,000 in 1912 to $6,000,000 in 1917, and the area planted for this year's harvest, 86,500 acres, is more than double that planted last year.

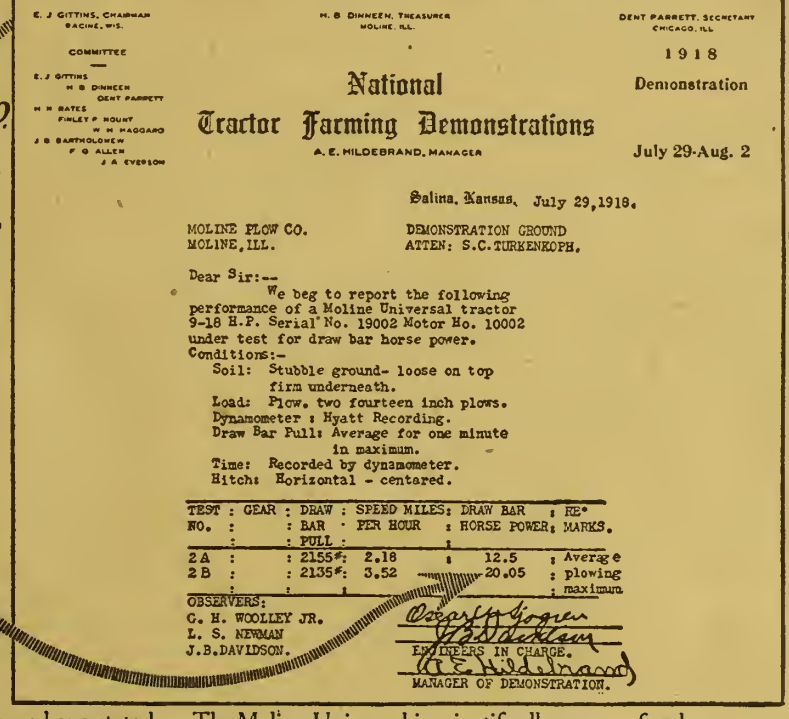
NOT ECONOMICAL TO MANURE CLOVER

Many farmers after repeated failures with clover, in desperation resort to manuring the land in an effort to grow the crop. This might be justified if manuring insured a good crop. That is not always the case, however, and the practice in general is of very questioinable value, particularly when clover can be successfully grown by providing an adequate supply of phosphorus and lime in the soil.

The rule should be to keep the soil well stocked with phosphates and lime. Under such conditions, the clover in harmony with certain soil organisms will feed upon atmospheric nitrogen and enrich the soil with this element which in commercial form costs 40 cents a pound.

When you find a good many things out of whack at the same time, and prices high and things scarce, you may know that the fad of depending upon others to do what one ought to do for himself is causing lots of inconvenience.

Moline-Universal Makes Wonderful Record at National Tractor Demonstration



E. J GITTINS, CHAIRMAN, RACINE, WIS. — H. B DINNEEN, TREASURER, MOLINE, ILL. — DENT PARRETT, SECRETARY, CHICAGO, ILL.

COMMITTEE: E. J GITTINS, H B DINNEEN, DENT PARRETT, H N BATES, FINLEY P MOUNT, W H HAGGARD, J B BARTHOLOMEW, F O ALLEN, J A EVERSON

National Tractor Farming Demonstrations
A. E. HILDEBRAND, MANAGER

1918 Demonstration
July 29-Aug. 2

Salina, Kansas, July 29, 1918.

MOLINE PLOW CO. MOLINE, ILL. — DEMONSTRATION GROUND ATTEN: S.C.TURKENKOPH.

Dear Sir:--
We beg to report the following performance of a Moline Universal tractor 9-18 H.P. Serial No. 19002 Motor No. 10002 under test for draw bar horse power.
Conditions:-
Soil: Stubble ground- loose on top firm underneath.
Load: Plow, two fourteen inch plows.
Dynamometer : Hyatt Recording.
Draw Bar Pull: Average for one minute in maximum.
Time: Recorded by dynamometer.
Hitch: Horizontal - centered.

TEST NO.	GEAR	DRAW BAR PULL	SPEED MILES PER HOUR	DRAW BAR HORSE POWER	REMARKS
2A		2155#	2.18	12.5	Average
2B		2135#	3.52	20.05	plowing maximum

OBSERVERS: G. H. WOOLLEY JR., L. S. NEWMAN, J.B.DAVIDSON.
ENGINEERS IN CHARGE.
MANAGER OF DEMONSTRATION.

Develops 20 H.P. on the draw bar and we only rate it at 9 H.P. Think of it!-

Officially Accredited with 26.48 H.P. at the belt- We rate it at 18 H.P.

IN previous advertising we have stated that the Moline-Universal was conservatively rated at 9-18 h. p. Just how conservative is shown by the astonishing official tests made at the National Tractor Demonstration which showed the Moline-Universal to have an excess of over 11 h. p. on the draw bar and 8 h. p. at the belt.

Certainly these tests show beyond question of doubt the efficiency of the Moline-Universal. For each 169 lbs. of weight the Moline-Universal developed 1 h. p. on the draw bar. Compare this with the ordinary tractor which develops 1 h. p. for each 250 to 300 lbs. weight—and you will clearly realize the greater efficiency and corresponding greater economy of the Moline-Universal.

However, we shall continue to rote the Moline-Universal at 9-18 h. p. A troctor to give satisfoctory service and stand up for years under the strain of troctor work must have reserve power, and the greater the reserve the better. Under normal conditions the Moline-Universal has from 50 to 100 per cent reserve power. Think what this meons.

Ninety-eight per cent of its entire weight is on the two big drive wheels where every ounce is available for traction. The Moline-Universal is scientifically constructed and utilizes its weight to best advantage. It has no dead weight.

From the above report you will see that the Moline-Universal developed 20.05 h. p. at 3.52 m.p.h. pulling two plow bottoms 9 to 10 in. deep in exceptionally hard plowing. At 2.18 m.p.h. it developed 12.5 h. p. The difference in speed accounts for the extra draw bar pull. At 3.5 m. p. h. under average conditions the Moline-Universal will plow as much in a day as a 3-plow tractor traveling at 2.25 m.p.h.

Just the Right Size

If the Moline-Universal were built to pull a 3-bottom plow, it would be too heavy for light work. As the Moline-Universal is now built it has ample capacity for all ordinary plowing needs, and at the same time is equally suited for light operations such as cultivating, haying, harvesting, etc. which require far more work hours than your heavy work.

You are chiefly concerned in getting your work done quicker and better than you ever did before. You have no fixed power requirements. One day your work may be heavy, the next day light—and the light work is just as important as the heavy. Thus, you must have a tractor which will do both heavy and light work efficiently and economically, and the Moline-Universal fully meets both these requirements. You have plenty of power when you need it and when you don't want it you have no extra expense—as you would have with a heavy tractor for light jobs.

Remember this—here s what the Moline-Universal Tractor will do for you:

(1) Gives you plenty of power for oll your work, both heovy and light.

(2) It does all farm work including cultivating.

(3) One man operates both tractor and implement from the seot of the implement in oll operations.

(4) Electric lights enable it to be worked nights to make up for unavoidable delays.

(5) Because of self-starter, non-robust lobor con operate tractor successfully.

(6) So well made and has so much reserve power thot it will give mony years of service.

Send for free catalog which gives detailed description of the Moline-Universal Tractor. Address Dept. 48.

Moline Plow Company, Moline, Illinois

FARM LANDS FOR SALE

A BIG LAND OPENING
COWS, HOGS AND A BANK BOOK.
Your dream of life, of ease, comfort and independence await you at
BIRMINGHAM,
On Port Susan Bay, Snohomish County; 6000 acres of the best land that lies out doors; a 2 hours' ride from Seattle places your feet on the richest, most productive soil in the whole state of Washington; rail and water transportation; near paved roads, schools, churches, cannery and condensary; 3½ miles of waterfront and finest beach on Puget Sound; 20 miles of beautiful lake shore, surrounding 8 picturesque lakes; these lakes teem with trout. Get in on the first choice for $35 per acre and up; 10 yearly payments, 6 per cent interest.
This is but the beginning of the story of Birmingham. Send to the owners for illustrated literature. BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

For Sale or Exchange in Kern County, smooth valley land all tillable. Good soil, plenty of water, grows fruit, alfalfa, cotton, beans, etc. Electric power, good roads, good neighbors, fine climate, schools, church; 160 acre relinquishment near railroad town, $10 per acre. Some improvements including well. Would consider auto in good condition as part pay. Owner in draft. Address Owner, J. S., Care Cultivator.

20 acres deep silt land, joining good town on the South; 10 a. alfalfa, 10 a. grain; 300 feet to railroad station. Plenty of water for irrigating. Soft water piped on place. Price right. Chas. McNeely, Alpaugh, California.

For Sale or Trade in Apple Valley, Victorville, California, 80 acres set to apples and pears; 100 inches water. What have you? Address Box 131, Victorville, California.

For Sale—2½ acres good bearing oranges, house and barn. Fine location $4000. S. A. Kline, R. R. 1, Box 14, Ontario.

RABBITS

Go Into Business for Yourself — Raise rabbits for meat and fur. Raise stock for us. We buy all you raise. Orders booked now for March delivery. Our booklet mailed for 10 cents. Los Angeles Fur Farm, Dept. C. C., 2669 N. Griffin Ave., Los Angeles.

For Sale—Rabbits. New Zealand Reds, extra large, fine color, none better, all young stock. $2.50 to $5.00. Order from this ad. Mrs. Emanual Smith, Etiwanda, California.

Money in Rabbits
Raise rabbits for us. Will pay $6.00 per pair. Send stamp for particulars. H. E. Gibson Co., Arcadia, California.

For Sale—New Zealand Red, Utility and pedigreed stock. Reasonable prices. Stephen E. Banneck, 330 E. North Hicks Street, Los Angeles, California.

For Sale — Rabbits, New Zealand and Flemish Giant, young stock. Paul Kruger, Watsonville, California.

TREES

Jasmine Nurseries are now ready to sell or contract for next planting. Only nursery in Kern County raising full line of fruit trees. Stock 90 per cent fine including almonds, apricots, peaches, apples, pears, prunes, figs, olives, pomegranite. All purchases made within Kern County delivered by truck. Spengler & Rickert, Jasmine, Kern Co., California.

For Sale — Very fine Valencia trees, two year high buds; ¾ inch to 1¼ SOUR ROOT. Also yearlings, SWEET ROOT, ½-in. to ¾-in. all very thrifty, finest soil for balling. S. R. Coate, 564 So. Los Angeles St., Anahelm, California. Pacific 403 J.

For Sale — Seed Bed Stock, Orange and Lemon Trees, and Avocado Trees of all standard varieties. Walker - Hubbard Nursery Co., San Fernando, California.

5000 Fine Sour Orange seedlings two feet and over ready to bud which we will sell reasonable. Spengler & Rickert, Jasmine, Kern Co., California.

Citrus Trees — All kinds, any quantity. Butler's Morning Side Nursery, Lamanda Park, California.

Citrus Nurseries, Murphy Oil Company, East Whittier, California. Selected stock for sale; inspection invited.

AGRICULTURAL IMPLEMENTS

IMPLEMENTS AND RANCH SUPPLIES. Samples and slightly used. Four floors. Large stock. Liberal credit. Save 50 per cent on some. No branches.
ARNOTT & COMPANY, INC.,
The Yellow Front. Established 1892.
112-118 S. Los Angeles St. Los Angeles.

GOATS

For Sale — 200 Angora Goats; will sell in quantities to suit. Good stock. Registered bucks. See stock at ranch at Devore. H. A. Clock, Devore, California.

Toggenburg Milch Goats — Rae P. Williams, Federal Realty Building, Oakland, California.

FOR LEASE

For Lease—7 acres damp land near El Monte, buildings fully equipped for dairying. Large hay barn near creamery and boulevard. Address R. D., Box 34, El Monte. Phone 31W.

To Lease—On shares. Large dairy and grain farm. Box 175, Tipton, Tulare Co., California.

MACHINERY

FOR SALE—USED MACHINERY.
Guaranteed to do same work as new.
WINDMILLS—8 ft., $32.50; 10 ft., $42.50; 12 ft., $65; 16 ft., $125 save half.
PUMPS — Bulldozer, 18-in. stroke, $95; double-acting Ames, $145; single Jack, 24-in. $55; 2½-in. rotary, $38; two-stage vertical B. J., $150; 7-in. vert. Krogh, $175; fine 6-in. horizontal, $125.
RANCH TOOLS — 1, 2, 3, 4 gang disc and moldboards; plows, spike tooth harrows, some new; Killefer cultivators; 4-horse power gear, $40; brand new John Deere alfalfa cultivator, cost $120, our price $85. New fanning mill hand or power, $39.
TANKS—New, used redwood and galv. tanks for less; 4500-gal. heavy galv. with top, $95; 6000-gal. galv., $120; 8000 heavy galv., $140; 25,000-gal. redwood, $135. DEMMITT CO., office 120 N. Main. Upstairs. Yards, 816 Yale. Also buy serviceable material.

REMANUFACTURED PIPE
All sizes, standard pipe, and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices.
WEISSBAUM PIPE WORKS,
169 Eleventh St., San Francisco.

For Sale, Holt Caterpillar Model 18. Has been entirely rebuilt by the Holt Mfg. Co. For information or demonstration phone owner, G. F. Blackwood, Glendora, or Holt Mfg. Co., Los Angeles. Might take good team as part payment but nothing else.

For Sale—On account of sale of all of our farming land, one 75 H. P. Holt Caterpillar tractor, in first class condition. THE PATTERSON RANCH COMPANY, OXNARD, CALIFORNIA.

Gasoline Engines, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

For Sale—Holt 75 Caterpillar built last year. Fine condition; 2 heavy Holt 6 disc plows. Now working. J. A. Ream, Warner Springs, California.

WANTED

Wanted—Practical Farmer Manager.
Owners of an estate in the hills overlooking San Fernando Valley want a resident farmer—a man who can carry on development work, cultivate about 130 acres of irrigated plow land, including orchards, walnut groves and alfalfa, and can care for and build up a herd of pure bred Herefords on mountain pasture adjoining. Faces on paved state highway, near good schools, high school, etc. Abundant water, domestic and irrigation, under water. Will provide good modern farm house. This may be the chance to educate your children you have been looking for. Address, by letter only, giving full information as to your experience and qualifications. Advertising Manager, Security Trust and Savings Bank, Los Angeles, California.

Wanted: Experienced Rancher to take charge of and operate a fruit and alfalfa ranch at his expense and take all crops for a period of time and eventually get a certain interest in matured orchard. We furnish a well, machinery, stocked (80) eighty acre ranch, you operate it. Ranch has 40 acres in apples and pears, some cherries, peaches and plums, 10 acres alfalfa all fenced, 2 pumping plants, cement irrigating pipe, water tank, house, barn, 5 miles from Victorville. Trees, 2, 3 and 4 years old, apricot and peach trees bearing, chance of a life time for party with a little money, experience and ambition, this is a square deal and we will verify the above. Bueneman Ranch, 901 East 8th St., Los Angeles, California.

Wanted November 1st on modern dairy farm position as manager, cattle department, thoroughly experienced and efficient in every branch of cattle management, calf raising, A. R. work, life time experience, best reference. Only high class pure bred proposition considered. American family. Address H, Care Cultivator.

Wanted to Rent on shares. Alfalfa, dairy, Stock ranch with cows, horses, hogs, equipment. Understand scientific methords of ranching, stock raising. Must be a proposition where up-to-date methods can be used. Life time experience. J. E. Black, 1030 E. 51st., Los Angeles, California.

Poultryman desires change from present position. Thirteen year's practical poultry experience covering all its branches. Line breeding Standard fowls, exhibiting, egg farming with S. C. White Leghorns, etc. Address F. P., Box 47, R. F. D., Novato, California.

Herdsman Wanted—Single man preferred. Could use a married man with small family. M., care Cultivator.

Want to Hear From Owner of Farm or fruit ranch for sale. O. O. Mattson, St. Paul, Minnesota.

PIPE

Surface Irrigation Pipe
for sale; 10 foot lengths, 20 guage, 10 and 11 inch, new, at substantial reduction; have 7000 feet. Address Ramsey Probasco, 2436 Virginia Street, Berkeley, California.

"TESTED" and "GUARANTEED"
Screw pipe, casing, valves and fittings. Riveted slip joint pipe; all sizes. New and used. "Pacific" pipe for all purposes.
PACIFIC PIPE CO.,
Main and Howard Sts., Est. 1906. San Francisco

FERTILIZERS

Lime—Slaked. Corrects heavy sour soils quickly. H. B. Matthews, 495 Douglas St., Pasadena.

HOGS

BERKSHIRES GUERNSEYS
GRAPE WILD FARMS
A few fall boars left by Royal Superbus—also a limited number of fall gilts. We have early spring pigs of both sexes and we are breeding some top gilts for fall farrow. Prices upon application.
A. B. HUMPHREY,
Escalon, San Joaquin County, California.

Sale of Duroc-Jersey Hogs and Pigs — Some of the greatest brood sows and pigs of the breed. Young boars for herd headers Col. and Orion C. King breeding. Come and select. Prices reasonable. One of the greatest yearling boars anywhere about 900 pounds. Everything goes. All life immune from cholera. Garden City Sanatarium, San Jose.

Get a Golden Sunset Duroc—Jr. Yearling, Cherry King show boar, ready to drive before the judge. Sired by a twice grand champion. Cherry color—bone 9½ inch, height 35½ inch., length 66 inch, girth 64 inch. Priced to sell. Also Spring boars and gilts. O. M. Trotter, P. O. B. 524 Artesia, New Mexico.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Station, Riverside, California.

We Pay Cash for Hogs of All Sizes, weights and breeds. Any number from one to several thousand considered. What have you? Durbin & Forbes, 722 San Fernando Building, Broadway 4170. 3030 E. Vernon Ave., South 2712-J. Los Angeles.

Rancho Rubio Durocs—Thirty of the finest fall gilts we ever raised. Will begin breeding May 10. Write for prices and pedigrees. Some splendid weaned boar pigs for $25.00. Elmer Lamb, Ceres, California.

"Billiken" Chesters; Service Boars—if you are needing a boar this fall now is the time to buy. Few bred sows due to farrow in October. Open fall gilts; few weaned boar pigs. C. B. Cunningham, Mills, California.

Mule Foot Hogs, large type, booking orders for spring litters. These are the farmers' easy feeding, profit producing kind. H. T. Bailey, Box 37, Lodi, California, "The Blue Gums."

For Sale — Poland-Chinas. Will book a few orders for extra quality gilts bred to my best herd boars for spring farrowing. Also a few good herd boars of serviceable age. Write to H. I. Marsh, Modesto, California.

For Sale — Registered Berkshire pigs sired by Lord Premier's Successor 11th. J. Pringle, at Oak Crest, Cahuenga Pass, R. D. 10, Box 864, Los Angeles. Holly. 14R3.

Wanted—To exchange a pure bred Tamworth boar weight about 550 pounds for pure bred Duroc or Chester White. Monte Vista Ranch, Spring Valley, California.

July Duroc-Jersey boar pigs, $25.00 each. Registered, delivered on board cars Lemon Cove, California. Guaranteed to please. C. L. Taylor, Three Rivers, California.

For Sale 2 Chester White boars 5-6 months. Best stock. Will sell for $35 each f. o. b. station if taken at once. Address R. D. 3, Box 243, Sacramento, California.

Castleview Berkshires are the typey, modern, quick-growing kind, choicest blood lines. Prices reasonable. Castleview Ranch, Berkshires exclusively, Santa Rosa.

The Best in the West—California Gertsdale and Presidents Equal are my herd sires. Fall and spring boars now ready to move; each one a corker. Dr. J. A. Crawshaw, Hanford, California.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, California.

Poland-Chinas—A limited number sows, bred to our great boar Model Wonder, big type, straight and right. Dimmick Brothers, Lemoore, California.

Carruther's Farm Berkshire Hogs — Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition. Live Oak, California.

Duroc-Jerseys — We breed the champions. Peters, Lamson & Walker, Devore, San Bernardino County, California.

Sprouted Grain

I would like very much some information on the method of sprouting grain for chickens. As we have it, the chickens are getting lame or have some affection of the back whereby they sit down when eating and while eating ravenously. There are more and more of them getting the same trouble. A good many of the young chickens are affected, and I feel that it is the feed, as we never had this trouble before. We have been soaking a sack of barley at a time and by the time it is gone the bottom of it is very sour. — Subscriber, San Luis Obispo.

It may be merely greediness, or perhaps real hunger that makes your chickens sit down to eat. If that is the only symptom of disease I should not worry. But your chickens will certainly be very ill sooner or later if they eat fermented barley. The proper way to sprout barley or oats is to soak it 24 to 36 hours and then let it stand and drain another 24 hours in a shallow box that has sufficient opening in the bottom to let all the water run out. I soak a pail full each day for 25 hens, but this is rather more than they will eat. After the grain has soaked I turn it out into a lug box (the kind used for potatoes) which is quite sure to have cracks in the bottom, and cover with a burlap sack. As soon as the white roots begin to show it is ready to feed. In hot weather it is necessary to wet the grain while it is in the box to keep it from drying out. If the grain is kept in any vessel that does not permit drainage it will ferment instead of sprouting as it should. I doubt if anyone but some one with oat sprouters to sell would say sprouting grain really makes it go farther. It makes it more palatable, and if fed at exactly the right time, more digestible, and it also gives it some value as green feed, but it does not add any nourishment, and I doubt if you will find a sack of barley lasts any longer when it is sprouted than when it is fed dry. On the other hand, I suspect the hens will eat it up faster if they are given all they will eat.

But sprouted grain does not take the place of hard, whole grain. The hens must have enough of the latter to keep their digestion in order. Why not feed some milo at night, letting them have the sprouted barley in the morning or at noon? As your hens have range and fresh alfalfa I should think it would hardly be necessary to sprout their barley and I should certainly not sprout all of it if I could not give them some hard grain beside. —J. A. K.

Scaly Legs

Please tell me what to do for chickens with scaly legs and for the depluming mite.—Subscriber, Los Angeles.

Lard and sulphur, rubbed well into the shanks, is as satisfactory a remedy as there is for scaly leg. If you prefer you may use coal tar, dipping the shanks into it and letting it dry on. Another remedy, particularly good when many birds are to be treated, is a mixture of one part kerosene and two parts raw linseed oil. Go to the roost at night and dip both legs of each affected bird in a quart measure of the mixture, holding them in a minute and allowing them to drip before replacing the bird on the roost.

In general, any remedy which will kill the mite which causes scaly leg will also kill the depluming mite, but you cannot dip the head of the bird as you can its legs, and kerosene is a remedy which must be used with care, for it burns if put on too strong. Lard and sulphur, oil of caraway mixed with vaseline (one part oil of caraway to five parts vaseline) may be used for the depluming mite, and the following is also recommended: One dram flowers of sulphur; 20 grains carbonate of potash; one-half ounce lard or vaseline. Rub on the affected parts every four or five days.—J. A. K.

Treating Roupy Turks

What would you advise for cold or swelled head in turkeys? They have had it for a long time.—Subscriber, San Luis Obispo.

Try dipping the heads of the roupy turkeys in a lard pail of warmish water which has been colored purple with potassium permanganate crystals. Do this morning and night, holding the head under as long as you dare. This will clean out the nasal passages, and if the birds are roosting out of doors they ought to get over the trouble quickly. When turkeys that sleep out have persistent roupy symptoms one may usually conclude they have an inherited tendency to the disease. Turkeys that are kept in after they are past their infancy cannot be expected to be healthy.—J. A. K.

Fattening Turkeys

I have 38 turkeys that weigh from 6 to 14 pounds each and have all the alfalfa pasture they want, very few bugs or grain. What should I feed and how much to fatten them by Thanksgiving? All I have fed has been sour milk and bran at night. Will cornmeal hurt them? Will ground oats that have become a little rancid from age hurt them? They were hatched in March.—Subscriber, Lakeside.

Now is the time to begin feeding corn, not much at once, but gradually, just a little this week—a little more next week. Do not drop off the ration they have been accustomed to, but add the corn. Whole corn is considered best for fattening turkeys. If you have not whole corn, cracked will answer. If you have not Indian corn, use milo or Gyp corn, but do not feed oats of any kind, least of all rancid oats. You will surely have sick turkeys if you do. Let them have all the sour milk and alfalfa they will eat, but gradually discontinue the bran until, by two weeks before they are to be marketed they have no grain but corn.—J. A. K.

The Palo Verde Valley, in common with every other producing section of the state, is having difficulty in securing sufficient help to harvest her great crop of cotton. The valley estimates that there is need for at least 1000 more pickers. The picking season will last until February.

DELCO-LIGHT
INCREASES FARM EFFICIENCY

Delco-Light in the Farm House Means:

An abundance of clear, bright electric light throughout the house and barn.

Running water in house and barn. A modern bath room, fire protection. No laborious pumping.

Economical power to operate the washing machine, the churn, the cream separator, the vacuum cleaner and other small machines.

It means increased profits in time and labor saved.

And a home that has in it the comforts and conveniences usually found only in the city.

Delco-Light is a complete electric light and power plant for farm or country home. It is self-cranking, air cooled; ball bearing. Has thick plate, long lived storage battery. No belts.

MORSE'S SEEDS FOR FARM AND RANCH

You Might As Well Plant the ORIGINAL

strain of Hairy Peruvian Alfalfa—and plant now! When you plant Morse's you know that it is not only true to strain but of proved germinating power. In common with all other Morse's Seeds, it is specially selected, extra recleaned, soil-tested.

MORSE'S
Hairy Peruvian Alfalfa

will make money for you because: It starts before other alfalfas — stands greater extremes of temperature — yields an EXTRA cutting per season — and always produces heavily.

Remember — no matter when you plan to put in your alfalfa — BUY YOUR SEED NOW! And see that it's Morse's. Big demand — limited supply — prices apt to go up any day. Order by mail or wire!

Do Not Delay the Purchase of A Piano Too Long

Owing to difficulty in obtaining raw materials and labor, and the rising costs of both, piano manufacturers raised their prices to us several times in the past year and a half—we were forced to raise our prices accordingly. The manufacturers now warn us that, as their production has been cut down by the War Industries Board to a small fraction of their original output, they cannot manufacture pianos on a quantity basis and sell at a quantity price—that the prices of the small number of pianos they will be permitted to make will soon increase enormously.

In fairness to our customers and friends, whose good will we value above all else, we issue the warning — purchase now (in the next few months) if you want a Piano—otherwise those in moderate or even comfortable circumstances must defer the purchase of a Piano for several years until the greatly increased prices go down because of a return to normal manufacturing conditions.

We invite you to call at any of our stores — or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.

Better service is assured by the advertiser if when writing you mention the California Cultivator.

Household Department

GIVING

Just money! That is all we're asked to give.
He gave his life, Jim. He'd have liked to live,
For Betty—bless her shy young heart—had only
The week before he left, put on his ring.
How long her life will be to her, how lonely
With nothing of him but remembering!
She never flinched, nor he, my son, they gave;
She working still, and Jimmie in his grave.

And now today we're asked again to save,
And give, give, give the country what we've sweat
And toiled to earn. It's hard for all—and yet,
We safe, we calm, we fortunate, we living,
I wonder, dare we, dare we call this giving?

—Mary Carolyn Davies.

HILLSBORO'S "BIT"

By Ernest Elwood Stanford in Youth's Companion

A TOURIST stopped at my shop yesterday for some repairs on his automobile. He was a big, pussy chap; loud voice, louder clothes and a New York number on his car. He got to talking about the war.

"It's certainly a relief to get back here in the hills away from it all," he says. "I don't suppose, Mr. Orramel Jones, that you realize your isolation enough to appreciate it. Even the daily papers hardly bother you here. I suppose you've hardly heard that the country is at war."

"We've heard rumors," says I.

And then I began to bang on a cold iron so I wouldn't have to hear how the draft had taken all his best clerks, and how the Liberty Loans and war taxes had knocked the bottom out of the stock market.

—

The day war was declared, little Doc Seagraves—he that married my daughter Miriam—burst into the shop, and I knew by the look on his face what he'd come for.

"They'll need doctors in the army," says he.

Before I could say a word my boy, Al, came round the corner. I thought he was in the electric works at Northville, 20 miles away.

"They'll need engineers in the army," says he.

Al had worked with me quite a spell after he finished high school, and he had the makings of a mighty good blacksmith. Then he got the education bug and went and worked his way through an engineering college. Made good, too, after he went into the electric works. He'd only been married a year and a half—Amy Fuller, she was, Deacon Barlow's niece—and they'd got a three-months-old baby, the cutest little feller, little Allen Orramel Jones!

I laid down my hammer and leaned back against the old anvil, for the two at once sort of took away my breath—not that I'd expected anything else.

"Yes," says I. "And wives'll need husbands and children'll need fathers."

Little Doc turned a shade whiter—he's not ruddy, anyway. There's two little Seagraveses—the oldest, four.

"Yes," says he. "Husbands and fathers to make the world safe for them to live in."

"Perhaps," says I.

And we didn't say anything more for quite a spell.

"There's a duty a man owes his family, and a duty he owes his country," says I, at last. "Everyone's got to decide for himself which comes first, or whether they both come together. You boys talk it over with your wives; and if you still think it's laid upon you, why, all you can do is go. As for the girls and the children, I've raised one family, and I guess I can look out for a couple more."

But I wasn't expecting what I got that night. After supper I was sitting in my stocking feet trying to read the paper while mother'd gone over to Miriam's. I didn't even hear the door open, but there stood Tommy—little Tommy, that was in school over to Northville, finishing up his last year.

"Dad, can I go?" says he.

I took my feet off the chair and looked up at him, and he looked back at me, square in the eye, where a man should look—little Tommy, eighteen years old now, straight as an arrow and broad as a door and near a foot taller'n I ever was, but little Tommy just the same.

"Tommy," says I, at last, "it's a lot you're asking. Allen and Phil are going."

Tommy said never a word—just kept looking straight back at me, and I could see there in his eye the grit that's made this nation what it is, and the cleanness of young manhood, with the fire of youth that lights a man to usefulness and heaven if it's burnt right and ruin and hell if it's not.

"Tommy," says I, "you're a young boy yet, and a brave one, I don't doubt. But there's boys as clean as you, not afraid of the fire of this world or the next, that'll come back from this war, or even the training camps, worthless to the country they swore to serve, a curse to the sorrowing women that bore 'em, and a damning blight to the unlucky generations that'll follow 'em. I reckon you get my meaning. I don't doubt you've got

Save Sugar, Children!

A Penny here means a Burn "Over there"

the right kind of grit that'll send you with the rest of the boys over the top. Have you got that which'll turn you away from the rest, when the crowd points their fingers and laughs, and your soul's in peril? You've never been tempted, Tommy. Can you come back, if God lets you come back, able to look your mother in the eye as you do now?"

"I can," says Tommy; and his voice was low and solemn, like a deep church bell over a distant hill.

"Then if she says it's all right, it's all right," says I.

And I got up and walked off outdoors somewhere. And I was glad it was dark.

So by and by we went to the train to see them off for the last time—the boys in their new uniforms stepping lively and straight, but looking a bit more solemn than usual; mother and the girls with their lips tight shut, but a bit blurry round the eyes—even Tommy—little rascal!—had a slip of a thing from Northville to wave after him; little Phil trotting along trying to keep step with his dad; the babies laughing and cooing in their carriages; and me—but I'm not saying anything about me. And we sent 'em away with what smiles we could, and we thought they were all heroes, and so they are, I hope. You don't have to hope that of the women that stay behind.

Then we went back home and tried to pick up things where we left 'em. Tried to.

'Twas a busy summer. And yet it was a quiet one. Little Doc and Allen and Tommy had had plenty of company when they'd marched away. The little boys killed Germans in the schoolyard while the G. A. R. did the same in Wilkins's store. The grass sprung round the quoit stake, and on Sunday the girls walked home from meeting alone or in silent little knots. Memorial Day we trimmed the cemetery as usual, but we didn't linger there.

It seemed for a while that there was mighty little for us that was left behind to do. Of course we took our little slice of the Liberty Loan and planted all the crops we could—not such a great sight, help being so scarce and most of us older than we wished we were. There was little enough risk in what we did, at that. Washy Perkyns, our local big bug, who had been training off flesh with dumb-bells and boxing gloves ever since the Lusitania went down, had hustled off to Plattsburg at the first call, and he sent back word he'd buy all we could raise at a good percentage above cost. He was good for it all right, but it made us feel sort of selfish.

About the last of planting time some one—I never did know who—suggested planting a big community garden for the Red Cross. The notion took big. Washy Perkyns—he'll be running Hillsboro yet by cable from France—lent us a piece of the best farm land in town, and we ploughed it and harrowed it and fertilized it and planted it in company and let our own work go. Fifty rods long and thirty wide it was; smooth, rolling land sloping west. 'Twas no small chore for us, circumstances considered. We made three strips of it: potatoes and beans and corn, each ten rods wide. Some said it was time wasted to plant that late corn, but we did it just the same.

(Continued next week.)

Cold, unduly reserved natures should remember that, though flowers may be found beneath the snow, it is chilly work to dig for them, and few care to take the trouble. — Maeterlinck.

NO loose ends to catch in things, no straps over the shoulder and no binding belt. Why burden yourself with unnecessary clothing? **LEE UNION-ALLS** are all in one piece like your union underwear—not only the most comfortable and convenient work garment manufactured but the most economical; triple stitched seams, reinforced strain points, riveted buttons and non-ripable button holes. BEARCAT

Wonderful Performance at Tractor Demonstration

Startles the most critical Tractor Buyers, and its 100% right construction gets the orders of some of the largest fruit growers in Southern California

POSITIVELY DUST PROOF

Strong as a Bear and Quick as a Cat. **Heavy Duty Slow Speed Motor**
Transmission and Rear Axle Housing Bolted Direct to Motor
Three Speed Transmission **Worm Drive Rear Axle** **Timken Roller Bearings**

One and one-half miles on low, 2½ to 3½ miles plow speed; 6 miles on the road. DIXEY magneto, with impulse starter. It is a 2-3 plow machine, with power to spare all the time—10 H. P. on the drawbar and 20 H. P. on the belt pulley, and it is positively different from all other Tractors; is built for every day hard work, with a minimum cost of upkeep.

Borg and Beck Clutch

It was the tractor that pulled two plows 10 inches to 14 inches deep all the time in land equal to cement, and never stopped.

Citrus Fruit Market

Los Angeles, October 2, 1918.

Last week's rains forced the slowing up of shipments and the market has been stiffened, more than counteracting a slight easing off which has been felt. New crop Jamaicas are coming into New York and Florida is shipping in some of her Parson Browns. Auction markets have shown some sales as high as $10 and $10.50.

Lemons are stiffening slightly.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 13,870 cars, lemons 5571, total 19,441. To same date last season, oranges 38,773, lemons 7519, total 46,292. Central California this season; oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 845.

Feeding Problems

Written for California Cultivator By Jean A. Koethen

AS WE enter the fifth year of the Great War, it will be well for all of us, individually and collectively, to stop and consider just where, to use a phrase so apt that it can hardly be called slang, we are "at." The two problems we have had to face for four years are the problems of cutting down expense and of increasing production. We have learned how to cull out the slackers and how to breed for increased production till we can almost make two eggs grow where one grew before. We have learned to do without wheat and corn and middlings and ground oats. We have learned to make our hens work for what they get and not to pay them too-well. And still we are only at the beginning. The question of feeding, like Banquo's ghost, still walks abroad and will not rest.

There is little new to be said about the feed itself. Some sort of balanced ration must be used. There must be some hard grain, some ground grain, some animal feed and a great deal of green feed. Experiments at the University Farm have shown that the amount of hard grain, which is more expensive than ground grain, may be reduced beyond what we had thought possible, without affecting either health or production. I believe the proportion last announced is about 60 per cent ground grain by weight to 40 per cent hard grain. We used to think there must be more than half hard grain. It must be remembered that if only the manufacture of eggs were to be considered we might use all ground grain, but that some hard grain is absolutely indispensable to the health of the birds. The muscles of the gizzard must have some work or they grow relaxed and weak and the whole system suffers. Just how much hard grain the hen must have to maintain health is still a question, but there must be some.

How far green feed can be made to take the place of grain is also a question we have not settled. Edward Brown stated that some English feeders are making greens half the ration and that egg production does not suffer in the least. If this is true, it is tremendously important. In this climate to raise enough vegetables and succulent greens for half the ration of 2000 hens would demand more land than many commercial poultrymen have at their disposal, and yet it may be necessary. Fortunately, there is plenty of idle land, much of it under water, and the rest suited for dry farming. We can at least plant vacant nearby lots to barley or oats or wheat. A neighbor of mine planted several lots to wheat last October. The grain did not sprout till the February rains gave it a start, but in the end he harvested a good crop, enough to help out considerably with his chickens. He says the secret of success with wheat is to get it in early, so that it will get the benefit of every bit of rain that falls.

Quite as important as the feed that is given is the method of feeding. A good feeder is one who has studied his own individual problems and mastered them. He may feed a moist mash or not, may mix his dry mash ingredients or feed them separately in hoppers, may feed his hard grain with an automatic feeder or in deep litter—all these are mere details. The good feeder works out a system, and then works it. If he feeds a moist mash he does so for reasons of his own, and not because some one says he should. If he cuts down hard grain and lets the hens fill their crops with soft feed he does this because he has worked out for himself a proportion that produces satisfactory results. He does not try every formula he sees in the columns of the poultry press, neither does he stick stubbornly to his own way. He is open minded, ready to try anything which promises results, but not ready to let go what has given him results until he has found something better.

Chickens like a variety but do not like sudden changes. Hence it is best always to make changes gradually. The good feeder does not drop an ingredient suddenly from his mash unless he is forced to do so. Even more careful is he about adding new ingredients, especially if they are not the regular ground grains. Alfalfa meal, when the hens are not accustomed to it, must sometimes be treated in this way, only a very small amount being given at the start. The good feeder studies his hens' idiosyncrasies. If he finds them leaving the hulls of steamed rolled barley or picking out certain grains from the scratch mixture and leaving others he modifies his ration as far as he may to suit the taste of the birds.

Chickens can be trained to almost any reasonable ration, but they dislike new things, unless they are very hungry or the new things very appetizing. Take stale bread, for example. This is one of the most wholesome feeds if it is not moldy, but chickens do not care for it dry, and even when it is soaked they are not eager for it if they have not been used to it. Soaked and mixed in the moist mash it finds instant acceptance. The good feeder takes care that there are no empty crops because of new feeds. Almost any new thing can be disguised by mixture with others which are familiar.

After all, it simmers down to this: use what you have and make the best of it. We are on short commons these days, but a litle extra care in preparing and feeding the ration, a little greater punctuality, more painstaking regularity, study of the individual fowl and elimination of discomfort, with the greatest possible use of green feed, will help us a good way along the road to economical feeding.

INCREASED EGG CONSUMPTION

Reports on the nation's egg supplies lately received by the United States food administration show that the number of eggs in storage in the United States on July 1 was practi cally the same as on July 1, 1917. With this condition, it is interesting to note that consumption had increased about 17 per cent, indicating that production must also have increased in about the same degree. Imports and exports are a negligible factor compared with the enormous size of the egg trade within the United States.

The poultryman who looks ahead is the one that does things. His plans for the future are laid, and he works as closely to them as it is possible.

Every fixture in the house should be movable. This will make it easier to fight lice.

Grit will be eaten by both old and young just as they need it, provided, of course, that a supply is constantly within reach.

Eggs all through the MOULT!
SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).
For Hogs A-1 Hog Feed 10% dry buttermilk) will save from $6 to $12 on fattening each hog.

Dollar-Making Facts For Poultry Keepers

What is Pratts Poultry Regulator?

A positive tonic and conditioner for poultry of all kinds and ages. *A health-builder and health-preserver.* Not a food.

What does it contain?

Roots, herbs, spices, mineral substances, etc. Each ingredient performs a certain duty. The combination spells "health insurance."

What does it do?

Pratts Poultry Regulator makes and keeps poultry healthy, vigorous and productive. It shortens the molt, sharpens the appetite, improves digestion and circulation, hastens growth and increases egg-production. *It saves feed* by preventing waste due to poor digestion. *It prevents disease* by keeping the birds in condition to resist the common ailments.

Has it been fully tested?

Yes! In general use for nearly fifty years. The *original* poultry conditioner. Imitated, but unequalled

Does it give general satisfaction?

Positively! *Satisfaction guaranteed or money refunded.* Test it at our risk. Increased egg-production will prove that "Pratts makes hens lay."

How is it best used?

Daily in small quantities. For adults, a tablespoonful daily for 10 birds. Younger stock in proportion. Mix with dry or moist mash.

What does it cost?

Nothing, because *it pays big profits.* One cent a month per hen is the *investment* required.

Where can I get it?

From 60,000 Pratt dealers. There is one near you. Direct from the manufacturer, prepaid, if your dealer can't supply you.

How can I learn more about it?

Ask the Pratt Food Co., Philadelphia, for valuable FREE BOOKS on poultry keeping. Write today!

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

The Winchester pattern. 320 pellets out of a possible 431, or 74% of the shot charge, evenly distributed, no birds get through

A quick eye and a good shot pattern

A QUICK eye and a good shot pattern, that's the game-getting combination. Given an old-timer with a reliable gun in his hand and the rest of the story is up to the shot pattern.

Now the secret of good patterns is in the control of the gas blast from the exploding powder. This in turn depends upon the *wadding* in the shell.

The wadding, like the piston head of a gas engine, must give the explosion something solid to work against so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance to the explosion so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where it is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431, or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yds.

The Winchester System

Winchester Wadding is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work. Though the explosion is almost instantaneous, it is none the less *progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle* where it is most needed.

Meanwhile, under the heat and pressure of combustion, the tough, springy *Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* the shot evenly.

At the muzzle, the shot pellets slip out without jamming, while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard-hitting, uniform pattern for which Winchester shot shells are world famous.

Fish Tail Flash. All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.

The Crimp. The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

Waterproofing and Lubrication. In the cold, damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester waterproofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

Uniform Shells. From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. $100,000 is spent annually in the inspection and testing of finished shot shells. 25,000,000 rounds of ammunition are fired every year in testing guns and ammunition.

Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. XX-21, New Haven, Conn., U.S.A.**

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

Coming events are casting their shadow on the cover this week. The "events" are in the form of ladybirds. It must be borne in mind that we humans have few firmer friends than the ladybirds. There is a very large family of them, and the one illustrated on the cover is a Cryptolaemus. The third page of this issue gives particulars as to its family history and its husky appetite. This appetite is resulting in ridding hundreds of California citrus orchards of one of their worst pests, the common citrus mealybug. Methods of rearing, of colonizing, and some of the work accomplished are given in the article referred to.

UNTIMELY WEATHER

The storms which have visited the Sacramento Valley are starting the pasturage and retarding the harvesting of rice. To the live stock man it's meat; to the rice grower, poison. Bean men, grain men, and others are suffering because of the weather, but what must be must be borne, so the plows are being started, new crops planted and a greater food campaign than ever is on.

NO BONUS

The sugar factories said they could not pay the prices required by beet growers and growers will not grow at factory prices. At this moment it looks as if next year's sugar output, like this year's, will be seriously short. Not sufficient beets have been grown this year to start all the factories. The growers have appealed to Washington, hoping for bounty or for inducement to the manufacturers to pay a living price. This the government has declined to do. Presumably beans will again take the place of beets.

PURE MILK

Los Angeles claims to have the purest and best supply of milk of any city in the world. This sounds somewhat like a California boost, but as dairymen supplying that city have won gold medals, diplomas and other awards at the National Dairy and other Eastern shows, and now come with a clean-up of by far the greater portion of the state fair awards, she makes fairly good her claim.

The milk scoring contest at Sacramento is reviewed on another page of this issue by Prof. Roadhouse of the state university, and when it is considered that this milk was produced and much of it shipped 500 or 600 miles in the middle of the heated season, the scores are remarkable.

SUBSCRIBE

Liberty Loan subscriptions are falling short. Whether the kaiser has accomplished this through his alleged "peace offensive" or whether it is through indifference is immaterial. Thinking folks should subscribe as never before. The unthinking or pacifists are the ones who are jumping at the conclusion that "bloodshed will now stop" and there will be no need for additional war funds. Six billions is an awful sum and 80 per cent of it must be raised by people with less than $10,000 income. Big manufacturing and moneyed interests are paying enormously in direct federal taxes. Those interests are also taking largely of bonds, but the greater number of us must carry the bigger load.

BASIS FOR TALK

Monday morning's papers were free with large type headlines: "Germany Accepts the President's Terms." Such headlines were decidedly misleading. A truer statement of Germany's position is: "It accepts the programme set forth by the President of the United States in his message to Congress on January 8, and in his later pronouncements, especially his speech of September 27, as a basis for peace negotiations." As a "basis" for talk the President's 14 peace terms would have given opportunity for a whole lot of twisting and turning, which is possible when crafty statesmen get together and have behind them a restored army which has taken advantage of every moment of a much desired armistice. As Napoleon said: "War is like government; it is an affair of 'tact'", and Prince Maximllian appears to have a surplus of "tact"—in good United States language—gall.

LET HIM EAT GRASS

"All this came upon the king Nebuchadnezzar.

"At the end of twelve months he walked in the palace of the kingdom of Babylon.

"The king spake, and said, Is not this great Babylon, that I have built for the house of the kingdom by the might of my power, and for the honor of my majesty?

"While the word was in the king's mouth, there fell a voice from heaven, saying, O king Nebuchadnezzar, to thee it is spoken; The kingdom is departed from thee.

"And they shall drive thee from men, and thy dwelling shall be with the beasts of the field: they shall make thee to eat grass as oxen, and seven times shall pass over thee, until thou know that the most High ruleth in the kingdom of men, and giveth it to whomsoever he will.

"The same hour was the thing fulfilled upon Nebuchadnezzar: and he was driven from men, and did eat grass as oxen, and his body was wet with the dew of heaven, till his hairs were grown like eagles' feathers, and his nails like birds' claws."

Lest we be accused of turning prophet we hasten to admit the above is not original. In fact, it was written some 2498 years ago by a gentleman named Daniel. We think we may prophesy, however, that in about another 2500 years, or in 4418 A. D., the world will be reading words of another prophet, (Uncle) Samuel, with as much interest as we do today regarding the diet of Nebuchadnezzar. That is, if Uncle Samuel stands fast.

And he stands.

> "Kultur in Belgium, and other devastated countries, is a tale so terrible that never yet has one dared more than whisper fragments of it. Yet the wrongs of Belgium, as a State outraged, pale beside the wrongs inflicted in savage, bestial revenge upon its defenceless women and children.
>
> "Such a civilization is not fit to live. And God willing, it shall be mended or ended. To this task America summons every loyal heart and hand. It is a Crusade, not merely to re-win the tomb of Christ, but to bring back to earth the rule of right, the peace, good will to men and gentleness He taught.
>
> "To carry on this crusade of modern righteousness means not merely that our young men shall cross the seas to fight the Hun. It means that we at home shall uphold them. It means that we shall back them with all things spiritual and material. It means that we shall lend, not merely from our plenty, but that we shall save and serve. It means that we shall give up many things that are dear to us; sacrifice, that our Crusaders may save us and our children from the horrors that have come to the little ones of Belgium and of France."

This Week's War Notes

The organization of the Czecho-Slovak army continues in Russia, and so far as can be learned the German officers and troops are retiring.

The war department has arranged for the construction of three additional war plants; one a trinitrotoluol factory to be operated by the Giant Powder Works near San Francisco to cost $1,438,000, two others in Pennsylvania.

The situation in Palestine is still more favorable to the Allies than at first anticipated. The English troops captured in excess of 75,000 Turkish troops, including practically all of the artillery. Our Arabian allies, to the east of the Jordan, captured over 10,000.

A terrific explosion occurred in the shell loading plant at Perth Amboy, New Jersey, 325 buildings of the plant were destroyed, together with hundreds of tons of T.N.T. The more sensational papers announced at first that thousands of lives were lost. The actual loss of life has been reduced to less than 100.

The Fourth Liberty Loan has been unfavorably affected by talk of a German collapse, and far below the proper percentage has been raised up to this moment. The need for a strong front was never greater, and every American is appealed to to do his duty. Subscribe to the Fourth Liberty Loan to the limit.

The collapse of Bulgaria has left the armies of the Allies in Macedonia and Servia to readjust the entire fighting front. The world is guessing as to whether Gen. d' Esperey, in command of the Macedonian forces, will make a plunge toward Constantinople or toward the Adriatic and cut off still more of the Austrian troops before they can escape. Many thousand Austrian troops have already been captured in Albania. The Austrians made feeble attack against the Italians in northeastern Italy, but were repulsed at every point.

Nearly all of the richest coal fields in Northern France are now behind Foch's advance line. Town after town has been captured, and two great wedges, one just above St. Quentin and one above Cambrai, have been driven many miles beyond the old Hindenburg line. The retiring Huns leave only desolation, for most of the homes and all of the factories or resources which may be used in restoration are destroyed. The North Sea end of the line is being bent back more and more, and the capture of Zeebrugge is not far away. At the southern end of the line the Americans are active, though no large engagement has taken place during the week.

The president's reply to Germany comprises a total of less than 300 words. Those 300 words are filled with American spirit and punch. There are no claws visible; it is all velvet. In fact, it is not a reply, but, Yankee-like, a question. "The president of the United States deems it necessary to assure himself of the exact meaning of the note of the imperial chancellor." "Does the imperial chancellor mean that the imperial German government accepts the terms laid down by the president, etc.?" "The president — would not feel at liberty to propose cessation of arms—so long as armies of Central Powers are upon the soil of our Allies." "Is the imperial chancellor speaking 'merely' for the constituted authorities who have so far conducted the war?" The quote on the word "merely" is ours, but the heart of one, Kaiser Bill, will go down to his boots at that word.

The most interesting item in the war news this week is the fact that the Huns are begging for peace. They do not admit it, however, and make their appeal as if granting a great concession to the Allies. The United States and all the Allies seem desperately indifferent, or, as Theodore Roosevelt expresses it: "The German government does not have to worry about peace terms. America and the Allies will tell Germany what she has to do. All she will have to do is to say, Yes, sir.'" The appeal was made by Prince Maximilian, the new imperial German chancellor, through the Swiss ambassador, the Austrian appeal through the Swedish ambassador. They were practically identical and accept the peace program as outlined by the president in a message to congress in January as a "basis" for negotiations. Prince Maximillan was appointed from the more liberal of the Socialists of Germany and it is generally considered that his selection was for the purpose of carrying the idea that the appeal was from the German "people." While the note was forwarded to the president of the United States it was with the request that he "acquaint all belligerent states, etc."

The Mealy Bug Surrenders to Cryptolaemus

By C. B. Messenger

I WELL recall many years ago, perhaps about 1887, visiting one of the first commercial orange orchards in California, known as the Wolfskill Place, near where the Southern Pacific depot now stands in Los Angeles. The trees, which had been large seedlings, were practically defoliated and were hung with a sticky and disgusting mass formed of honey-dew and of the refuse and bodies of millions of the scales generally known as the white scale (Icerya purchasi), or cottony cushion scale or sometimes fluted scale.

Nor was this the only orchard in the state infested thus seriously. Hundreds of citrus orchards in varying degree were being wiped off the slate as a commercial factor, that is, hundreds of orchards—if there were hundreds in the state at that time—for it must be borne in mind that a year's output then is sometimes nearly equaled by a single weeks' shipments now.

Catching Adult Ladybirds

H. M. Armitage, shaking cryptolaemus from branches of the lemon trees in the Culp orchard in Ventura.

Spraying methods were primitive; fumigation was as yet practically unknown; though most serious investigation was being made along both lines. In addition there had been for years men in this state who believed in turning on the armies of bugs other bug armies which would automatically control them.

Albert Koebele, agent of the U. S. department of agriculture, went to Australia and in 1889 came back with a little lady-bird, the common vedalia, we believe more recently and correctly known as Novius cardinalis. This little lady-bird was a wonder worker. In fact, the result of its introduction has been declared to be one of the most astonishing events in economic insect control. In a word, California's orchards were ridded forever of the pest of white scale. There are still occasional outbreaks of white scale in this country. There are also colonies of the vedalia, and they are always on the job. One of the beneficial works of the state insectary, operating under the state commission of horticulture, is the maintenance of the life of this wonderful insect.

Since then almost unnumbered pilgrimages have been made to all parts of the world seeking for the natural enemies of injurious insects. One of the most interesting exhibits at the recent state fair, and an exhibit which is being made at the Liberty Fair now being held in Los Angeles, is that of a big green beetle, Calasoma, introduced from Europe by the federal government in the effort to control the gypsy moth. This monster goes over the top like a regular steel tank. He is a beetle about an inch in length, greenish-bronze, and when a bit hungry tackles a big tomato worm or similar morsel very much as would a terrier a rat.

Another beneficial insect introduction which created much interest and which in limited districts promised much, was that of the Rhizobius which preyed upon the black scale. At Santa Barbara — on the Elwood Cooper place—this insect (or these, rather, for there were four different members of the family, the ventralis, debilis, toowoombae, etc.) did some wonderful work. About '89 or '90 I went to Santa Barbara for 25 orange growers to get colonies of these insects. They were gathered under the direction of Alexander Craw and later liberated in Pomona orchards. But, as was the case with this insect almost everywhere, none of those colonies ever were heard of again.

In more favored locations, such as near the sea, these beneficial insects may still be found and possibly are more beneficial than we ordinarily credit them with being.

Up the Flue

The cryptolaemus has a way of hunting out the hidden and shady spots. Underneath this tree, which has been colonized by the cryptolaemus, was the old smokestack of an orchard heater. The end of the pipe, into which we are looking, was hidden and darkened, but it had been found by the crypts. In addition the burlap band around the tree, which had been provided to give the bugs a hiding place, had been sought out, and in the depression may be seen many of the pupae massed together. The adult ladybird goes forth to seek more mealy bugs.

But neither space nor general interest calls for a list of the efforts to introduce these natural enemies of injurious pests. But one such introduction is worth a story. It may not prove as marked an example of the advantage of scientific investigation of fruit growing problems as did the vedalia, for one reason at least that the pest in question has never secured the foothold which was secured by the white scale. This pest is the mealy bug.

There are mealy bugs and mealy bugs. Four, which are economic factors in California fruit growing operations, are: Pseudococcus citri, P. citrophilus, P. bakeri, P. longispinus, In fact there are oodles of these varieties of the pseudococcus—with the accent on the last syllable—but for the purposes of this story the first mentioned is sufficient.

The Pseudococcus citri, or more commonly called the citrus mealy bug, has been sprayed with carbolic acid emulsion, has been fumigated double strength twice in succession, and still comes up little the worse for wear. The result of the work of the pest on citrus trees was such that not only was the fruit made unsalable, but the tree was ultimately practically destroyed. There have been seasons and locations when the pest seemed to gradually disappear after it had taken hold of an orchard. Those making a study of its work were aware that it had natural enemies which accounted for its disappearance. There was the green and brown lacewing, the leucopis, the scymnus of the lady-bird family; all of these being predators. In addition there were parasitic insects, such as the Paraleptomastix, or usually called Leptomastix, recently introduced from Sicily by the state insectary.

Harvesting the Bugs Ready to Ship

The container which Mr. Armitage has in his right hand is more plainly shown in the cover illustration. The small glass tube projecting from the stopper end of the larger glass tube is open. When the bugs are shaken from the tree onto the sheet supported by the light frame they instinctively "play possum." Swift work will then soon secure within the larger tube a dozen or more of the ladybirds. This is repeated until hundreds or more may be gathered. The end of the large container, which is hidden in the hand in the cover illustration, may then be removed the same as the cover of a tin box. Then the crypts are jarred into the permanent mailing tube.

Migrating

Pasture is getting short in tree top. Hence the little crypts are migrating to grow up in another tree, and they may be seen on tree trunk and heater in the above photograph. Photos by California Cultivator.

The trouble with some of these beneficial insects is that they have their insect enemies, and it seemed impossible to secure sufficient natural increase to overbalance the destructiveness of the natural enemies. But there was one exception, and this proved to be also a lady-bird, Cryptolaemus montrouzieri. This insect was likewise introduced by Mr. Koebele, acting at that time under direction of the department of agriculture and with the cooperation of the state horticultural commission, or at that time, board, of California.

Continued on Page 362

Agricultural News Notes of the Pacific Coast

Northern California

Plumas County reports the largest fruit crop in six years.

Woodland reports Yolo County's rice harvest as proceeding.

Glenn County will replace much barley acreage with wheat.

The anthrax situation in Yolo County is reported much improved.

Farmers' short courses are now in session at Davis university farm.

The Maxwell Rice Company of Colusa County is harvesting 2800 acres of rice.

Fig harvest is in full blast, the crop is about 50 per cent normal owing to the dry season.

A county wide fight against pear blight has been inaugurated in El Dorado County.

Warehousemen at Oroville are planning to make room for much of the Richvale rice crop.

California's live stock shipments for the month of August are 56.2 per cent over those made for July.

A serious outbreak of anthrax in several sections of the Sacramento Valley is causing great losses to live stock.

Freeman & Graves, Willows, are building a new warehouse 80x100 feet, capacity 80,000 bags, to be used for storing rice.

Several farmers of the Esparto district of Yolo County are planning to put in large acreage of Early Baart wheat this year.

Rice men of Butte County are also disturbed because of the rainy weather which has delayed maturity of their grain crops.

One thousand acres old prairie land between Anderson and Cottonwood has been brought under irrigation and is being put into alfalfa.

Farm Adviser Sweet of Butte County will aid the draft boards in giving recommendations as to needed exemptions for agricultural work.

The El Dorado County farm bureau held its annual farm picnic at Coloma, October 10. Exhibits of farm crops and live stock were made.

Northern California's olive crop is estimated at 50 per cent of normal by E. H. Ehmann of Oroville. He also states that the crop will ripen early.

An almond grower of Esparto, Yolo County, recently drove into town with a load of almonds consisting of 225 sacks and rode home with a check for $4590.

The epidemic of anthrax in Yolo, Colusa, Butte and Glenn Counties continues, much valuable stock has died, vaccination is being performed as rapidly as possible, horses, mules, cattle and hogs suffer.

The El Dorado County farm bureau directors met recently at Placerville and discussed cooperative fire insurance. Adviser Jones reported on the material increase in crop production required for 1919.

The Cultivator representative in Glenn County writes of cool weather and rains retarding the ripening of rice, but the condition has been materially improved by warmer weather the past few days.

W. D. Englebert of Willows, a rice grower and an authority on rice, estimates 3,250,000 bags as this year's crop. He has raised his estimate 250,000 sacks since the late rain, claiming it has benefited late rice.

Central California

Construction on a new flour mill has begun in Modesto.

Atwater, Merced County, has just held a most successful harvest fair.

More than half of the Muscat grape crop of the state has already been picked.

Hanford has been made a center for receiving castor bean seed for government use.

The Santa Cruz County farm bureau is aiding in the campaign for a big wheat acreage.

Cattle being brought down from mountain pastures are mostly in excellent condition.

A number of Kern County alfalfa growers have joined the California Alfalfa Growers' Association.

Riverbank, Stanislaus County, reports heavy losses to hay in outlying districts from the recent rains.

The annual Fresno County farm bureau mass meeting and picnic will be held at Kearny Park October 24.

Grain men of Madera County have pooled their orders for seed wheat and are purchasing in large quantities.

Owing to prospect for early rains stockmen are bringing their cattle out of the mountains as rapidly as possible.

California's celery crop will be 90 per cent of normal. Carload shipments will start about the 20th of this month.

Two careless campers in Tulare County were last week given fines for leaving their fires burning while they were hunting.

Complaints are being made of damage to Santa Cruz County roads by heavily loaded narrow-tired wagons and heavy tractors.

The greater proportion of raisins is past danger from the storms and growers are rapidly stacking all which are not fully dried.

A mass meeting of wheat farmers of Fresno County and others interested in the more wheat campaign was held at Fresno October 2.

The fig crop of California this year is estimated at from 8000 to 10,000 tons. The movement of the crop will continue well into January.

San Joaquin County is asked by the federal government to increase its wheat acreage by 10,000. That will mean a planting of 35,000 acres.

Emperor grape growers of the San Joaquin Valley are receiving such long prices that if rains hold off the output will bring in large returns.

Fresno County reports no damage to table or raisin grapes from the rains which did so much damage to these crops in sections farther north.

Demonstrations in morning glory control are being given in Santa Cruz County by Prof. Geo. P. Gray of the state university. The means of control demonstrated is an arsenical spray.

Local meetings of the San Joaquin County farm bureau are announced for Lockeford, October 14; Ripon, 17; Manteca, 18; Escalon, 21; Live Oak, 28. Directors meeting at Stockton, October 12.

W. F. Chandler of Fresno has been nominated agricultural adviser of the district draft board which has jurisdiction in the San Joaquin Valley and Southern California Counties outside of Los Angeles.

Southern California

A new gin has been installed at Indio, Imperial County.

The food administration announces that it will not fix prices of beans.

The Liberty Fair opens today, October 12 at Exposition Park, Los Angeles.

The coming citrus output is estimated to be around 60 per cent of normal.

Twenty-five women of the Land Army have gone to work on a seed farm in Santa Ana.

The Hueneme, Ventura County, tomato packing house will put up approximately 10,000 tons.

Citrus growers are planning to engage units of the Women's Land Army for harvesting the coming citrus crop.

Imperial Valley's cotton crop is proving one of the biggest and finest ever. Harvesting is proceeding under fair labor conditions.

The Doheny ranch near Los Alamos, Santa Barbara County, has 1700 acres in Limas and a large planting of sugar beets, a new crop for that section.

Huntington Beach held an Orange County fair October 2, 3, 4, 5. Exhibits will be taken from this fair to the Liberty Fair in Los Angeles which opens this week.

Imperial County has a new home demonstration agent in Miss Ruth Dickey. Miss Dickey is now in the valley attending the series of special farm center meetings started September 30.

In answer to petition of Chino beet growers that they be granted a government bonus on sugar beet plantings word has been received that the government will neither set a price nor grant a bonus.

Bean growers of Ventura County are objecting because their fields are still unthreshed for want of men while men are kept busy gleaning in the fields of the more fortunate ones whose crops have already been threshed.

The sheriff of Orange County has been appealed to to prevent gleaners from going to bean fields and gathering lima beans which have rattled out in windstorm or in process of harvesting. Such beans have been commonly considered public property, but at 12 cents a pound the farmers insist on arrest of those taking the beans without proper arrangements.

There are two Santa Clara Valleys in California; one of course in Santa Clara County and one along the Little Santa Clara River in Ventura County. The Ventura County Valley has a new association, the "Santa Clara Valley Agricultural Association." Its first work will be along the line of handling the labor question of all of Ventura County. Membership in the association is open to producers and to laborers.

Orange County farmers have formed an association for handling the labor question. A mass convention recently held was addressed by J. P. Dargitz, field representative of the state council of defense. He roundly roasted the I. W. W. and "poachers" on the other hand. The "poacher" is the farmer who hires from under his neighbor farmer his entire crew at perhaps a slight advance in wages. He said there should be more brains used in the handling of the labor situation.

The Coast and General

Arizona is marketing a good harvest of dates.

The Oregon agricultural college opened on September 30.

Prune growers of Lane County, Oregon, are getting 8½ cents.

Cranberry picking is on in the marshes of Clatsop County, Oregon.

Oregon is planning to put in a largely increased acreage of winter wheat.

Coos County, Oregon, claims more silos than any other county in the state.

General rains throughout Utah have put stock ranges in excellent condition.

The Willamette Valley of Oregon, has had an excellent prune crop. both in quality and quantity.

The Ohio college of agriculture is planning to make an actual census of all cattle and hogs in the state.

Farm owners of Langell, Oregon, are planning an irrigation district to put some 20,000 acres under water.

An intensive study of cotton varieties is being made at the federal experiment station at Sacaton, Arizona.

The salmon pack of the Columbia River for the spring of 1918 amounts to more than four and a half million dollars.

A uniform system of potato grading for Canada and the United States is being urged by growers of New Brunswick.

The government of Burma has an agricultural loans act whereby it is empowered to advance money directly to farmers.

The entire crop of prunes of Clarke County, Washington, has been ordered held until government requirements are satisfied.

The Lemi County fair at Salem, Idaho, held October 9, 10, 11 had as one outstanding feature a sale of bulls by the Shorthorn Breeders' Association.

Wheat shipments to Astoria, Oregon, have been embargoed as the capacity of the elevators and transportation facilities at that center has been reached.

Governor Withycombe of Oregon has made offer of the state fair grounds at Salem for use as an army cantonment. The grounds have already been used for the fall fair.

Yakima, Washington, hop growers, as a result of the announcement of the order prohibiting the manufacture of beer after December 1, ceased picking the valley's crop last week, which is estimated at between 17,000 and 20,000 bales. Cessation of harvesting will, it is estimated result in a loss of at least $260,000 to the growers.

The state advisory committee of the United States employment service, which will have supervision over the recruiting and distribution of labor and the transfer of men for war work from industries which are not directly connected with the prosecution of the war, was organized recently by William T. Boyce, superintendent of the Pacific Coast district.

Federal agricultural officials are preparing a national agricultural war program indicating the quantities of food which should be produced next season to support an army of 4,800,000 men in France. It is expected that in each state the agricultural college through its extension service and including the county agricultural agents, will take charge of the program.

Taking the School to the Farm

Written for California Cultivator by C. A. Nidever

THE dry legal phrasing of an act of congress does not make particularly exciting reading to most people. It is likely that if any farmer read the following act he would have passed it up as entirely out of his line, though it is to the farmer especially, and to the American people as a whole one of the most far reaching acts of congress:

The act reads:

"An Act passed by the Senate and House of Representatives of the United States of America, in Congress Assembled, Entitled an Act to provide for the promotion of vocational education; to provide for the cooperation with the states in the promotion of such education in agriculture and the trade and industries; to provide for the cooperation with the states in the preparation of teachers of vocational subjects; and to appropriate money and regulate its expenditure."

It means that the federal government has agreed to appropriate money to establish a course in agriculture and trades in any public school in the United States and to help train teachers for such education. The act is sometimes called the Smith-Hughes bill.

It was approved by the president Feb. 23, 1917, accepted for California by the governor May 29, 1917, adopted by the state board of education July 19, 1917.

It is now a full fledged law and can be established in any high school of California that wishes to train its students in agriculture and trades.

All that is necessary to establish the Smith-Hughes bill in the high school is for the trustees to apply to the state board of education for the course and fulfill the requirements for its establishment.

The main purpose of the act is to give a finished education in agriculture and the trades to persons above 14 years of age who desire such education, irrespective of whether they are going to school or not.

The state board of education has divided the act in two parts: Agriculture which will apply more to the high schools of agricultural districts; trades, household economics and industries, which will apply more to city schools, though household economics is gaining steadily in favor in rural districts. However, any school may put in all subjects if it is so desired.

It is the purpose of this article to show mainly what the Smith-Hughes bill has for the farmers and the person who wishes to take up agriculture in any of its branches.

Any farmer or farmer's wife or any person of any occupation, boy or girl, over 14 years of age who is willing to go to school three hours each day may take up the course and study any phase of agriculture that they desire.

We will say for instance that a young man is in the dairy business. He may take three hours each day at school and get a thorough course in dairying. Milk testing apparatus will be at his disposal. He will learn to use it and will test his own herd.

Agricultural journals and reference books of the highest authority will be in the school library for his use. He will receive individual instruction in feeding, breeding, marketing and general management of his herd.

Three hours each day at school is required of each student no matter what branch of agriculture he takes up.

The student must conduct at least one school farm project each year.

This must consist of the production and marketing of farm, orchard, vineyard, or garden crop, bees, poultry, stock, etc.

What special study one will take is a matter of individual choice. The project is under the supervision of the agricultural teacher and must be conducted along scientific and business lines as laid down by him. An accurate account will be kept of labor expended, seed and all transactions pertaining to cost of production and marketing. The accounts will be balanced at the end of the season so that the student will know how much he has made and where and how he has made it.

This farm project work is designed to fit in as much as possible with the regular farm work that the student is doing or is helping to do at home. If a man is farming grain and his son is taking an agricultural course in high school, a few acres will be laid out which will be worked by the son under the supervision of the agricultural teacher. The same will apply to any other branch of the course.

The object is to take the school to the farm to teach practical up-to-date farm methods to the coming generation of farmers.

It is a tool being put into the hands of the boys and girls of today to enable them to work intelligently and scientifically at agriculture, which is, when conducted on a paying basis, one of the most satisfying, honorable occupations in existence.

At school the student will study farm mechanics, which consists of farm carpentry, concrete and cement work, plumbing, pipe fitting, forge work, operation and repair of motors, engines and automobiles.

Electrical wiring and other such mechanical operations that every well trained farmer needs in his daily work will be studied.

A thorough course in farm mathematics will be given, such as farm accounts, algebra and geometrical problems. This work is designed especially to aid the farmer in his calculations on the farm.

Physics, chemistry, soil study, biology and sanitation are subjects that the embryo farmer will absorb for future reference.

Farm English to consist of scientific and literary writings dealing with rural life will be taught. Compositions will be written by students upon farm life and the business of farming.

The following is approximately the amount of money that will be available for California from federal and state funds.

For work conducted during 1918-19, $27,592; 1919-20, $36,790; 1920-21, $45,987; 1921-22, $55,185; 1922-23, $64,382; 1923-24, $73,580; 1924-25, $91,975; 1925-26, $110,372; and annually thereafter $110,372.

Schools that take up this course are authorized to provide the necessary equipment, such as carpenter shop, blacksmith shop, lathes and all necessary tools.

This course when established becomes a part of the regular public school system. The agricultural teacher, though his salary is partly paid by the state and federal appropriation, is a member of the school faculty and has the same standing as the English, history or mathematics teacher.

The Smith-Hughes bill work should not be confused with the present course of manual training, domestic science and academic agriculture now taught in some schools.

It is strange that we have been so long in establishing agriculture in our school system. To till the soil is an instinct with the human race. It was its first occupation. It is the last to be taught in our public schools.

Education is the best investment that the young man or woman can make. That the young people get an education, is the best insurance to America that she will maintain her present high and honorable position in the world.

The country schools lag behind the city schools in efficiency. Let us see to it that every opportunity is given the country boys and girls to perfect themselves in their very important life work.

Preparation is the key note of efficiency. Let us have preparation without stint.

Mr. Farmer, if you haven't the benfits of the Smith-Hughes bill established in your high school go to your trustees and demand it. It is your patriotic duty to see that all possible be done to get it.

Making Alfalfa Silage

By F. W. Woll, University of California

ON ACCOUNT of the weather conditions this fall and the possibility of the rainy season starting in early, many farmers are considering whether it will not be necessary to make silage of the last cutting of alfalfa to save it for feeding. There is but little experience at hand in regard to making silage from this cutting, and the question is frequently asked as to the quality of the silage made from alfalfa alone. It is entirely feasible to make good silage from a pure stand of alfalfa, and where the weather makes it doubtful whether it can be successfully cured the silo offers the only safe way of preserving the crop for feeding purposes. The best results in making alfalfa silage are reached when the crop is put into the silo not too green nor with too much water in it and when the cut alfalfa is carefully packed so as to leave as little air as possible in the siloed mass. The alfalfa is therefore preferably cut at full bloom; if it is considered safer to cut it before this stage it may be wilted somewhat before being filled into the silo, say by cutting in the morning and leaving it until the afternoon, or even the following day. It is important, however, that the crop be only slightly dried out, for a certain amount of moisture (about 60 to 80 per cent) is necessary to secure correct silage fermentations. If the alfalfa as filled into the silo appears rather dry so that it does not feel moist on pressing a handful hard, it will be necessary to add some water to the top layer in the silo and thorough tramping during the filling process, especially along the wall, is particularly important in such a case. Water can aso be added by running a small stream into the blower during the filling, but this is only necessary in the case of very dry forage.

If put up as suggested, the alfalfa silage will have a clean, slightly acid flavor and will be readily eaten by stock. Such alfalfa silage has not, in general, quite as agreeable an odor as silage made from well matured Indian corn or sorghum varieties, but after stock has gotten accustomed to it they like it and will eat nearly as large amounts as of corn or sorghum silage.

In making alfalfa silage this crop has sometimes been mixed with carbohydrate feeds like Indian corn stover, sorghum stalks, straw, corn chop or molasses. This is done to insure similar fermentations in the silo as in the case of the crops of the grass family mentioned. Kansas experiments showed that 5 per cent of molasses added to the alfalfa makes silage of best quality, but any of the materials given may be used for this purpose, and these feeds may thus be utilized for stock feeding with least possible waste. The main difficuty in the way of mixing alfalfa and corn stalks, straw or similar materials for the silo is to secure an even mixture of them. Alternate armfuls should be run through the cutter so as to get a uniform mixture and it is generally difficult to do this in ordinary farm practice. If alternate loads are filled into the silo, there will be distinct layers, about a foot thick, of alfalfa and corn stalks or whatever other material is used, and in feeding out the silage, stock will be shifted from one kind to another, which does not make for best results. Fortunately, however, it is possible to make a good quality of silage from alfalfa only, as by the method suggested above, and where an even mixture of the silage crops cannot be secured, the better practice is to silo the materials separately, either in the same silo, placing the heavier feed on top, or in different silos.—F. W. W.

* * *

In addition to Prof. Woll's suggestions above, we may add that the food administration, or rather Mr. Hoover personally, appeals to the American farmer in the following message:

Use All Roughage Available

Owing to the extension of the drouth area, the shortening of the corn crop, the larger population in the country, and the Allied demands upon us for feeding stuffs for their own animals because of their own shortage in produce of feed grain, it is necessary that we should exert every effort in the proper conservation of feeding stuffs during the next twelve months. It is necessary that we should ship a larger proportion of wheat as compared with flour during the next twelve months than during the last twelve months to the Allied countries, because their

The Wonder Pump

Guaranteed 5 Years

The Wonder Pump is a Wonder Because:

1—It requires less power than other pumps.

2—Has only five working parts and is simple to operate.

3—It will out last several centrifugal pumps.

4—It saves its price in power consumed.

5—It will pump air and water at the same time.

6—It needs no priming.

7—Takes up little space and is very compact.

Why use a centrifugal pump when you can purchase a Wonder Pump at the same price?

THE MEALY BUG SURRENDERS

Continued from Page 359

Notwithstanding a residence of more than a quarter century in California this ladyhird had never attracted marked attention. She had continued to board herself, however, and kept the family together, and oc casionally in making examination of the depredations of the mealy bug, Mrs. Cryptolaemus and the little Cryptolaemuses were found husy.

The planting of the cryptolaemus in California began under the administration of Elwood Cooper and other members of the old state board of horticulture. Watchful care was maintained over it and its work by Mr. Carnes, under the administration of J. W. Jeffrey, and later by Harry S. Smith of the state insectary under the administration of Dr. A. J. Cook and G. H. Hecke.

Curtiss P. Claussen has perhaps given more intensive study to the mealy bug question than any other Pacific Coast investigator. In September of 1915 the University of California issued Bulletin No. 258 written by Mr. Claussen. At that time he found that "At present only occasional specimens can be found, even in heavily infested groves, and there is little reason to believe that this parasite is in any very large measure responsible for the general decline in the severity of the mealy bug infestation in that county since that time."

But later when Mr. Claussen transferred his activities from the university to the state horticultural commission and went south to take charge of the Alhambra hranch of the state insectary he began finding indications of most effective work hy the little crypts. One difficulty to overcome was that the life cycles of the two insects were not identical. The life cycle of the mealy bug is more extended than that of the cryptolaemus, and after the larval and adult crypts had devoured the entire generation of mealy bugs another generation refused to come on in time to save the life of the little predator.

At this point human effort stepped in, and under indoor conditions where warmth overcame winter influence large numbers of mealy bugs pasturing on potato tops were used as pasture for larger numbers of cryptolaemus. About that potato top pasture:

I went to Alhambra a few days ago, and H. M. Armitage, assistant superintendent of the state insectary and in charge of the Alhambra branch, showed many interesting things of the insect world and took particular pride in his potato field. The insectary is not growing potatoes to help Hoover, directly, but is producing lush young potato sprouts which are especially tasty to young mealy bugs. When the sprouts are six or eight inches long, the growth heing secured in a darkened cellar, the mealy bugs are turned into the pasture. The stock is secured from the leaves and fruit of lemon trees. When the infestation becomes complete the adult lady-birds of the cryptolaemus are admitted. Within a few weeks the eggs have hatched, and the larvae, not entirely unlike the mealy hugs themselves, proceed to move from sprout to sprout and devour the adult, the larva and even the egg of every mealy bug. Then if the season is proper a colony is taken from this cage and placed in the orchard.

By means of this indoor hatching it is anticipated there will be millions of these crypts for March or April distribution and that another year will see a material reduction of California's mealy bugs.

Sprouting Potatoes

When these potatoes have sprouts half a foot long they are put in the breeding cages covered with gauze and muslin, and the mealy bug takes to the sprouts like a duck to water. When fully infested a few adult ladybirds are released in the cages, and they send out the call to other ladybirds; "Come on in; the mealy bugs are fine," and soon the cage is filled with more crypts to eat more mealy bugs.

In addition to seeing laboratory work with these predaceous insects, through the courtesy of Mr. Armitage I was shown through the Culp orchards at Ventura some weeks ago. The photographs on this page give a more vivid impression of the work being done in that orchard than can be given by words. In early spring portions of this orchard were so seriously infested with mealy hug that no marketahle fruit was to be had and the trees hore a most sickly appearance. At the time of the visit in early September scarcely a mealy bug was to be found, but there were thousands of crypts seeking someone to devour. Note in the photograph where the oil pot is stored under the tree. The white specks showing plainly in the picture are crypts seeking new pastures. Those particular trees were entirely free from mealy bug.

In this desire the little friends of the citrus grower are given aid and comfort by a force of state and county employes. A. A. Brock, horticultural commissioner of Ventura County, has carried many colonies to other citrus orchards. In many cases the owners of these orchards are doubting Thomases and wear a rather cynical expression when the bugs are released, and it has to be confessed that sometimes the cynic has the opportunity of saying: "I told you so." However, ultimately the cryptolaemus makes good and destroys the enemy of the orange and lemon tree. Mr. Teague and Mr.

Large Experience Gets Results

Culbertson of the Limoneira orchards have planted many colonies.

A general supervision of the distribution of these colonies is maintained by the state horticultural commission. Mr. Hecke has been insistent on the Alhambra branch of the state insectary doing a work which shall be of decided value to citrus producers of the state. This branch is located in the center of the citrus district. More, it is located in a district which is infested with all four varieties of the mealy bug.

Since Mr. Claussen and Mr. Perrin, who immediately succeeded him, have gone into army service this station has been under the direction of H. M. Armitage, assistant superintendent and in charge of the branch. Mr. Armitage and Paul Howard, his assistant, now have a merry family of the cryptolaemus, and they have on hand a fund of information for the citrus grower who will call at the branch state insectary.

There are scores of other insects which have been introduced, which have proven more or less beneficial. Nature's way of controlling the pests, most of which have been introduced from other countries, has strong ap-

Lemon Infested With Mealy Bug

peal, especially to the grower who has seen his profits disappear in the long costs of fumigation and spraying. Research work is being conducted by Dr. L. O. Howard, of the entomological bureau of the United States department of agriculture, with many assistants investigating in foreign lands. Dr. Howard has been inspired to much of his work and enthused by the cooperation and success which has been secured in California. This state is a pioneer and is today passing on to other countries some of the advantages it has secured because of years of hard work. Today many colonies of cryptolaemus and other insects are being sent to France and other countries. The latest work taken up under direct supervision of the state commission was the sending of E. J. Vosler to Australia to secure the best leaf hopper parasite or any predaceous insect which would also prey upon the mealy bug.

ANNUAL MEETING LOS ANGELES COUNTY FARM BUREAU

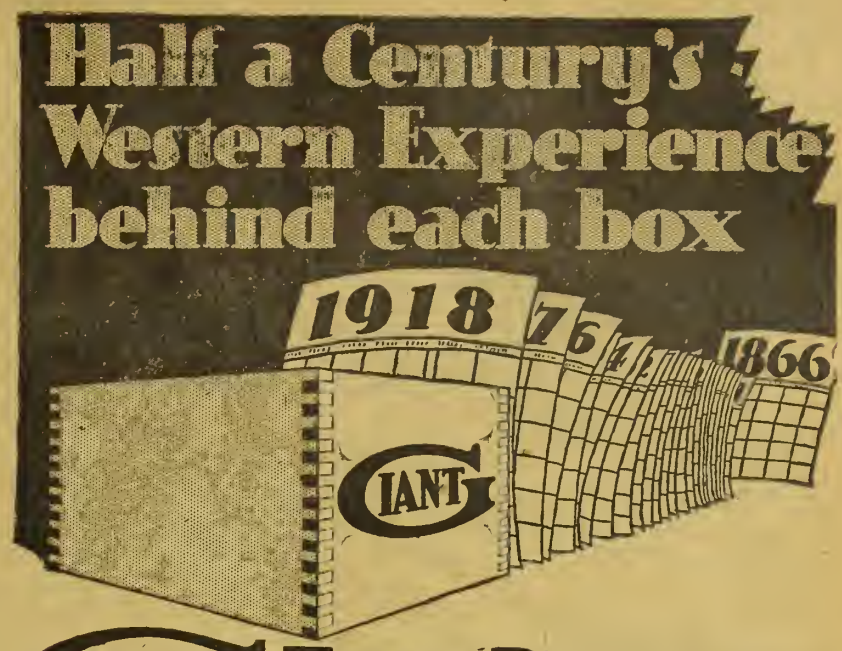
The first annual meeting of the Los Angeles County farm bureau will be held in the auditorium of the Armory building at Liberty Fair grounds, corner South Figueroa and Exposition Boulevard, on Thursday, October 17, at 10 o'clock. The meeting will be adjourned at noon in order that all who desire may spend the afternoon at the Liberty Fair.

This is a general meeting of the farm bureau and every member of each center should make a special effort to attend. An interesting program is being arranged.

Remember the date and come to the meeting.

"It is one thing to ask a man to save. It is one thing to ask a man to invest in Liberty bonds. These things tremendously aid the nation; but they are also a certain benefit to the individual. It is another thing to ask a man to put his labor and capital into the production of food, facing the hazard of the weather, of distribution, and of the market."—Secretary Houston.

Half a Century's Western Experience behind each box



GIANT FARM POWDERS

STUMPING — AGRICULTURAL

For more than 50 years Giant Powders have cut the cost of western blasting. In all this time they have been constantly improved and adapted to western conditions by a western company. Naturally they make western land clearing easier, faster and cheaper.

Giant Farm Powders—Giant and Eureka Stumping—go further than ordinary dynamites. Farmers and orchardists find that they can do more and better work at less cost with Giant Powders. Hundreds write us that Giant brands "save money"—"give better results"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

Caution: Be sure you get the genuine Giant Powders, the product of the manufacturers who originated the name. Look for the Giant trade-mark. It is your only sure protection against imitations.

Send coupon (or postal mentioning this paper) for the big free book "Better Farming." It tells you scores of money-saving ways of doing farm jobs. Write for this gold mine of information today.

The Genuine Germain's Hairy Peruvian Alfalfa Seed is Sealed and Stenciled!

Ranchers, dairymen and others who fail to place their orders for Germain's Hairy Peruvian Alfalfa seed at once, will be doomed to disappointment. The supply is extremely limited and the overwhelming demand will soon exhaust our stock.

It is the duty of every rancher to make his acreage produce to the utmost. Why be content with the old types of alfalfa when Germain's Hairy Peruvian will produce twenty percent more tonnage to the acre?

W. E. Alexander of Anaheim, Cal., writes: "Germain's Hairy Peruvian has produced nearly double the yield of the old variety. It has more leaves and less stem."

To obtain the best results buy only Germain's Hairy Peruvian—sold in sealed and stenciled sacks.

When you write mention this magazine

Inoculate seed with FARMOGERM before planting, and obtain a larger, better and earlier yield.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Ice Cream Without Sugar

In reading through Household Queries in the Cultivator of September 7, 1918 I find a fellow subscriber who would like a substitute for sugar in ice cream. Here is my recipe which I have used all summer, and which I find very good.

Two boxes of Jello ice cream powder, two eggs, two tablespoons white karo syrup, flavoring about three quarts of milk or milk and cream.

Dissolve Jello ice cream powder in one cup of milk. Add yolks of eggs, Karo syrup and flavoring. Mix well, lastly add beaten whites of eggs and pour in freezer with milk. If freezer is not full a little more milk may be added.

This will freeze one gallon. Crushed fruit may be used if a small quantity of sugar is added.—Mrs. David Warnock, Waukena.

Little Leaf

Am sending branches from peach tree. Tree started well in the spring but all the later leaves are extremely small, yellowish leaves. Trees have borne no fruit. What is trouble and cure?—Subscriber.

This is a case of little leaf, the cause of which is not thoroughly understood. It is denied by some but others maintain that little leaf is a poor physical condition of the tree induced by an over dry condition about the roots in the preceding fall. Many fruit growers have an idea that once the fruit is off the tree the demand for moisture is over, and the tree is allowed to become seriously injured or possibly to die. Many a shy crop has resulted from this extremely dry soil condition in the fall time. It takes moisture to plump up and perfect next year's fruit buds. Even when the tree is supposed to be perfectly dormant in mid winter the roots still require some moisture. However, there may be other causes of little leaf and some day the question may be better understood.

Peach Tree Dying

In my peach orchard many trees show a great deal of dead wood. Many of the leaves look healthy excepting for peach leaf curl and fungus spots. In other cases the entire tree is dead. What is the trouble?—Subscriber, Downey.

See answer to Little Leaf for we think this is another case of lack of fall moisture. However, these leaves were referred to Prof. H. L. Fawcett of the Citrus Experiment Station at Riverside, to determine the effect of shot hole or other fungus on the leaves. Prof. Fawcett says, "This fungus would not in my opinion be sufficient to cause the death of the tree." Last year was an exceptionally trying one on all deciduous orchards which were not fall irrigated.

Summer Pruning of Apricots

My apricot trees which are about 10 years old are set 20 feet apart each way but are so large and have so much foliage that they appear to be too crowded and I had thought of taking out every other row or every other tree in alternate rows to give them more room, but am wondering if summer pruning would not cure the trouble. So far have practiced only winter pruning and last year did not prune. The trees are loaded heavily but fruit is too small and shade too dense. Trees here make a very rapid growth.—Subscriber, Mesa, Arizona.

Apricot trees ten years of age should not require thinning to the extent of taking half the trees out. Of course one could intercrop the land and it would not be entirely waste, but at the same time the loss from removing vigorous young trees would not be made up in any intercrop. As to summer pruning this should have been done immediately after removal of the fruit, then it would have sent out growth of new wood and if plenty of water had been given would have set buds for next year. Unless the season is long this could not be accomplished. Again, if the trees had been loaded with fruit it would perhaps be wise to prune now and reduce the number of buds for next season's crop. The dense shade may be improved by winter pruning. However, your Arizona conditions require plenty of shade.

Walnut Questions

Would like to hear in the Cultivator of something to bleach walnuts. I also have a walnut tree that has very thin shells; some have holes in them. What causes this? Is it the nature of the tree?—Subscriber, Lompoc.

There has been no change in the method of bleaching walnuts by the chlorine process but it is scarcely practical for a small grower. The California Walnut Growers' Association bought all the rights to use the patented method but the patent has almost, if not quite expired. The best way is for all the walnut growers of a district to organize an association and have the sorting, grading, bleaching and other work done at a central packing house where it can be done much cheaper than at home.

There are often walnut trees in seedling orchards which produce nuts having thin, or perforated shells. This is more noticeable in some years than others but the cause has not been fully determined. Such shells are seldom found in the standard grafted varieties.—J. B. N.

Turkeys Have Chicken Pox

My turkeys' heads are covered with warty appearing lumps that will cover the whole head even onto their bills and eyelids till they cannot see to eat. Otherwise they do not seem sick and are as hearty as usual. I have some that stay around the premises and roost near the pigstye, and I thought it might be caused from unsanitary surroundings, but I have a flock of lovely ones that have never been near the others but live off in the corn and alfalfa field that are taking the same disease. The large and small are affected alike. I first noticed it on a year old gobbler. Will you please tell me the cause and cure, as I fear it will spread to them all. The gobbler was easily cured although very bad when I discovered him. I painted his head with iodine twice and the lumps dried up. Also gave him a dose of salts and isolated him from the others. But the smaller ones do not seem to respond to that treatment.—Subscriber, Madera.

Your turkeys have chicken pox, which seems to be quite prevalent this fall. It cannot be cured by external applications, though it is a good plan to rub the sores with carbolated vaseline. Neither can it be cured by internal remedies, for it has to run its course, but it can be relieved and the period shortened somewhat. Two remedies are in use for chicken pox, calcium sulphide and flour of sulphur. The calcium sulphide comes in tablets and cannot always be had in

proper strength. When it is fresh and strong, the dose is one grain daily for each bird. This is best given in the wet mash. Flour of sulphur is mixed in the dry mash for chickens, being made about five per cent of the mash. As your turkeys probably do not have a dry mash you can mix it into a moist mash of bran and sour milk. Dr. Sanborn prefers flour of sulphur because of the difficulty of getting calcium sulphide in sufficient strength. Give the dose once daily till there is improvement.

As chicken pox is very infectious the premises must be thoroughly cleaned after the epidemic has passed. If a single germ remains the young birds will have it again next year. At the University of California they have found a serum for inoculating fowls against chicken pox. It is probably too late for this to do you any good, but you might write them about it.—J. A .K.

Poultry House for 150 Hens

I am writing you in regard to a hen house to take care of about 150 White Leghorn laying hens. I am inclosing a cut of a type of house in use in the east and central states but I was wondering if it was necessary to build so large a house here. The dimensions of house in cut are 40x14 feet and it is supposed to house 100 Leghorns. —Subscriber, Campo.

The house in the cut referred to, which is of what is known as the Monitor type, is not as much used in California as the more simple gable roof with a long slope on one side and a short one on the other. Some put the short slope of the gable at the rear, and some put it in front. When it is in front and is prolonged two feet or so to make overhanging eaves, it gives such excellent protection from sun and rain that nothing more is needed. The front is entirely open except for wire and the feeding troughs and nests, which usually fill the lower three feet. Most commercial poultrymen house their birds in flocks of 150 or more. In a long house meant for say 600 birds, this would mean four sections each holding 150, and the sections are as nearly square as possible. For your flock of 150 birds a house 20x24 would be ample, since it allows over three feet per bird. The roosts and droppings board will occupy the rear half of the house, from about 2½ feet above the floor, but the entire floor is left open for the use of the fowls for scratching and exercising. An article on California Poultry Houses, with illustrations, will appear in the Cultivator soon and will answer your questions more in detai than is possible here.—J. A. K.

Bean Rust

Would you please tell us why the Pink beans rusted so badly this year? Does the White bean rust as bad as the Pink? Does the Blackeye bean sell as readily in the market as the Pink, and how does the price compare?—Sulphuret.

Rust is a fungous disease that is carried over from year to year and climatic conditions this year have been very favorable to its development. The method of control would be to begin spraying with Bordeaux mixture or lime-sulphur solution when the plants are six to eight inches high and continue spraying at intervals of two weeks until three or four applications have been put on. Rust is liable to attack any of the beans but the Pinks seem to be more susceptible than the White or Blackeye.

Locally the Pink beans sell a little more readily than Blackeye but for export trade the Blackeye is more in demand. In price they are nearly the same.—D. F. R.

Everybody is at Southern California Fair This Week

Riverside is the hostess. The wireless informs us that the show is good; the crowds are better; and the spirit of everybody is the best. More next week.

La Crosse Happy Farmer TRACTOR

FOR only $1075 you can have the greatest tractor ever built. It is the Happy Farmer.

Because of the thousands of Happy Farmer Tractors we are building and selling, we are able to buy the best materials in great quantities and at bottom prices. Every part of the Happy Farmer is made in our own plant by the most up-to-date labor-saving machinery.

The low price of $1075 is the direct result of the size and system of the great company which makes the Happy Farmer Tractor.

Simplicity of Design

The Happy Farmer has the simple, wide tread and perfectly balanced design, which does away with unnecessary weight and keeps down fuel cost.

The Happy Farmer is the one man tractor. Every working part can be reached without stooping. Thousands of satisfied Happy Farmer owners testify that it is the perfect kerosene burning tractor for every size farm. It is the tractor which is self-guiding in the furrow and which turns short in its own tracks in a space of less than nine feet.

The Happy Farmer is rated at 12-24 horsepower and is the tractor which can be made to act like horses and throw more power on either side when needed.

Happy Farmer Tractor Implements

Happy Farmer Tractor Implements lead the field with the Happy Farmer Tractor. The Happy Farmer Grain Drill is the one with the patented automatic power lift and power pressure. Happy Farmer Disk Harrows have special strength and durability for tractor work. Happy Farmer Moldboard Plows are operated by the simple pulling of a cord from the driver's seat on the tractor.

See the Happy Farmer Yourself

Dealers are taking orders for the Happy Farmer Tractor now. We cannot guarantee to supply the demand unless orders are placed at once. There is a Happy Farmer distributor near you who holds Happy Farmer demonstrations from time to time. See the Happy Farmer at work and let it prove its leadership. Write us today for the name of nearest distributor who will let you know when the next demonstration is to be.

THE McDonald Pitless Scale eliminates all guessing. It stops the leaks and is a constant source of profit and satisfaction. No progressive farmer can afford to be without a reliable scale.

The McDonald is the original pitless scale. It is easy to erect and easy to move. We guarantee it to retain its accuracy for 10 years to U. S. Standard weights. However, it is so substantially and finely constructed that it will retain its accuracy from 20 to 25 years with practically no repairs. There are thousands of McDonald Pitless Scales in daily use by railroads, manufacturers, mill operators, farmers, stockmen, in fact, in every line of business in which a wagon scale is necessary—the best evidence of their superiority.

Ask your Moline Dealer about the McDonald Pitless Scale or write us for full information.

California Cultivator

Costs $1 per Year

Rooster or Capon, Which?

Written for California Cultivator By Jean A. Koethen

IN FEEDING high priced grain to capons you must remember that a capon will make two pounds of meat on the same or less feed than it takes to make one pound on a hen. That is, you can grow a ten pound capon on the same feed that it would take to produce a five pound hen or pullet of the same breed, in any of the American or English varieties. At the same time you can expect to get at least twice as much per pound for the capons as the average yearly price of hens." So says George Beuoy, the Kansas "Capon King." Doubtless what he says of prices is true in Kansas, but is it true in California?

Being in some doubt as to the answer to this question, I called up a leading poultry commission house in Los Angeles. "Capons?" he replied, "why, the capon industry in California cannot be called an industry at all. There is no demand to speak of. People here are not educated up to paying the price a capon must bring in order to pay for the long time he is fed. In the Middle West, where they have cheap feed, they can do it; here feed costs too much. Very few capons are used in Los Angeles. Some of the high class hotels and clubs use them and some Pasadena folks, but people here won't pay what they will pay in San Francisco and Eastern cities. We haven't got the right kind of sports, that's all.

Then he went on to tell me that the few dozen capons he handled last February sold for about 48 cents a pound dressed, while roasters sold for 33 cents, but the capons had been fed since spring of the previous year—almost a whole year—while the roasters, which were hatched probably in September, had been fed only five months. Was the extra 15 cents a pound worth seven months of feeding? This man says no, and I think all of us who have tried to raise market poultry on high priced feed will agree with him.

In the opinion of this commission man no market poultry pays as well as the good, substantial hen of one of the heavy breeds, that has paid for her raising with eggs. When she goes to market at the end of her first or her second, or it may be even her third season's laying, she brings from 25 to 35 cents a pound alive, and age makes no difference. What she brings as a market fowl ought to be clear profit, and if she weighs from six to eight pounds, as many of these hens will, the profit is a comfortable one. For some reason the Los Angeles public is partial to hens. They are not educated up to capons or even to a nice soft rooster, but they dote on a good plump hen.

There are reasons for caponizing, however, over and above the question of profit, and it is to some of these I wish to call attention.

In the first place, caponizing keeps a rooster from becoming tough as he grows older. Cockerels up to about six months of age, or until their spurs develop, are classed as soft roasters and bring a good price. As soon as their spurs are developed they begin to take on a tough and stringy quality, and a drop in price follows. If cockerels can be advantageously marketed before this time, well and good. If they are hatched late in the spring, however, they reach frying size in summer or early fall when fryers are cheap. If these late hatched cockerels can be kept soft and tender until January or February, and the additional feed does not eat up the additional profit, there may be an advantage in keeping them for market. Certainly it would be better to caponize surplus cockerels for home use than to sell at a loss what one could not use as fryers and roasters.

In the second place, capons are said to make the best of mothers. On a ranch where there are plenty of broody hens more mothers may not be needed, but when chicks are hatched artificially a capon mother, able to cover 25 or 30 chicks, would be very useful. The capon is said to be more watchful than a hen mother and more ready to defend his brood from hawks and crows, although "on account of his greater size, dignified and commanding bearing, tame, docile and affectionate disposition, and quick perception, he seldom ruffles a feather or is called upon to put up a defense."

(Continued next week.)

STORRS EGG LAYING CONTEST

Storrs, Connecticut, September 26, 1918. Report for the forty-seventh week ending September 25, 1918.

In the forty-seventh week of the egg laying contest at Storrs pen 73, White Leghorns entered by A. P. Robinson, Calverton, New York, tied with the "Oregons" for first honors, each pen having laid 50 eggs.

Bird 195 owned by Obed G. Knight of Bridgeton, Rhode Island, is still laying at her usual rate, having laid six eggs this week. She is now two eggs ahead of the best hen's yearly production of last year, which was 277 eggs. This bird has 35 days in which she has to lay 21 eggs to reach the 300 mark.

Though England has killed off much of its poultry and rationed what remains, the sportmanship of her people is shown in the fact that Miss N. H. Bell, of Ightham, Kent, England, has applied for admission of a pen of Leghorns in the contest that starts November 1.

The three best pens in each of the principal varieties are as follows:

Barred Plymouth Rocks

Richard Allen, 1854; Jules F. Francias, 1803; Tom J. Adamson, 1803.

White Wyandottes

Obed G. Knight, 1987; Brayman Farm, 1740; Mrs. R. W. Stevens, 1711.

Rhode Island Reds

Richard Allen, 1831; Pinecrest Orchards, 1686; Pequot Poultry Farm, 1542.

White Leghorns

Hollywood Farm, 1940; Braeside Poultry Farm, 1912; J. O. LeFevre, 1888.

Miscellaneous

Oregon Agricutural College (Oregons), 2142; H. P. Cloyes, (Buff Wyandottes), 1686; Cook & Porter, (Buff Wyandottes), 1655.

People who can't stand prosperity won't have to stand it long.—Albany Journal.

Eggs all through the MOULT!
SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).
For Hogs A-1 Hog Feed 10% dry buttermilk) will save from $6 to $12 on fattening each hog.

FOLKS TO MAKE FAIRS

IT TAKES folks to make a fair. We talk of going to see pumpkins and squashes; hogs, sheep, horses and cattle; needlework and jellies; but at the same time, figured down to its last analysis, at least half of us go to see and be in the crowd and get the personal touch. Nor is this spirit other than commendable. Of course we always decry the getting together of great masses of people to see some spectacular event. Still, if the real object is to study agricultural problems or to learn how to do more effective work in any constructive line, let us continue to get together.

And speaking of folks, the possibility of getting in touch with the experts who come to judge of quality, and to hear their estimates of what constitutes quality, and to see the articles which are entering into competition gives swifter education than can be secured in any other way.

Such opportunities were never so plentiful as they have been this year. At the state fair it was many times remarked that the educational opportunities offered by the judges' expressions of their opinions and reasons for decisions were of inestimable value. District and county fairs have also offered similar opportunities.

Now comes the Liberty Fair, and there will be a great gathering of people. They will get in touch with some of the brightest experts judging the various classes.

For instance: One line of work by the committee on agriculture for this fair—which will be held in Los Angeles, October 12-26. This is a milk scoring contest. The premiums are only nominal, but it is understood there will be many entries in these classes.

For judges Prof. C. L. Roadhouse of the University of California and Dr. C. F. Hoyt of the dairy division of the United States department of agriculture, located at Salt Lake City, will come to Los Angeles, and their services will be available to every dairyman. They will be aided by the laboratories of the board of health of Los Angeles, and milk which is not strictly up to standard will soon be in a class by itself, for there will be some remarkable fine exhibits of milk from the dairies of Southern California, which supply to Los Angeles the purest milk which any city of its size has.

This exhibit will be in the northwest corner of the foods building, which is the permanent exposition building at Exposition Park.

The greater part of the exhibits which have been handled by the committee on agriculture will be, however, located in the agriculture and horticulture building. This is an attractive temporary building located just west of the permanent exposition building. In it will be feature exhibits of various counties and communities. These will be made up of both agricultural and horticultural products, but there is going to be far stronger competition for the $1575 in prizes than was anticipated.

There are being exhibited the "corn" of Egypt, in other words, various types of sorghums, wheat in variety, all other kinds of grain; beans, "57 varieties"; vegetables dried, vegetables canned; textiles; drug plants, but this is not the place for the premium list. There has been much hard work to secure representative exhibits.

But the largest exhibit, and the one which will attract most attention, which has come under the management of this committee, is that of farm power and farm implements. Acres will be covered by this exhibit, and in the present day of labor shortage, not only interest, but necessity, compels attention to these aids to farm work. Better than the exhibits of machinery will be the opportunity given for getting in personal touch with some of the best informed mechanics and power experts.

Liberty Fair, Los Angeles, October 12-26, will aid in greater production of better foods.

Changing the kind of wheat grown should be done only for the purpose of getting a proved better variety. It is often desirable to do this, provided it is proved beyond question that the new variety is better for that locality. So-called "new" varieties, extravagantly advertised at fancy prices, should be disregarded completely.

Jevne's Products
Famous in the East

Jevne's "35„ Coffee
Famous in the West

All her gifts Nature showered on California.

Her products grown in rich black soil, bathed in warming Westerly wind, kissed by the golden sun are the pride of this section.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

Milk From Diseased Udders Detrimental to Health

Milk from the udders of cows suffering from mastitis (commonly called caked bag, garget, etc.) should not be used for human food as some very troublesome diseases may arise from doing so, especially in children. Milk from udders or portions of udders so affected nearly always contain harmful bacteria which multiply with great rapidity when the milk is drawn and these organisms may be responsible for nausea, vomiting and even diarrhea in the consumer. Epidemics of septic sore throat in many instances have been traced to the milk supply having been contaminated by one or more cows in a herd which were suffering from mastitis. The pus present in milk from a mastitis udder may impart to the milk an unpleasant taste and the milk may curdle and putrefy within a few hours after being drawn. If ony one quarter of an udder is affected and a small top milking pail is used the milk from the healthy portions may be used. The diseased portion should then be milked into a separate vessel and boiled before being disposed of.—Wm. H. Feldman, Colorado Agricultural College.

Difficult Churning Not Due to Feed

Difficulty in churning is often experienced when only one cow is milked, and that one a stripper. It never occurs when using cream from fresh cows. The cream churns hard because it contains more curd than the fresh cow's milk, and the fat is harder. The trouble has no connection with failure to supply salt or with the character of the feed given the animal, says C. H. Eckles of the University of Missouri college of agriculture.

The first thing to do is to make certain the cream is not too thin and that the temperature is right. Having these conditions right does not always remedy the trouble. In bad cases there is no practical remedy, especially when the milk all comes from one cow. A cow that is producing milk giving rise to this trouble had better be dried up as soon as she has been in milk ten months or more. Adding cream from a fresh cow will generally cause the cream from both to churn if not too thin and the temperature is right.

CHILDREN FIRST

Railway dining cars are now doing some valuable advertising for dairymen. On every table may be found slips calling atention to the food values of milk and butter. For example, from one recently picked up on a Southern Pacific diner:

"Milk is one of the most important food sources the human race posesses. For the proper nourishment of the child, it is absolutely indispensable and its use should be kept up in the diet as long as possible. Not only does it contain all the essential food elements in the most available form for ready digestion, but the recent scientific discoveries show it to be especially rich in certain peculiar properties that alone render growth possible. This essential quality makes it also of special value in the sick room. In hospitals it has also been shown that the wounded recover more rapidly when they have milk.

"For the purpose of stimulating growth, and especially in children, butter fat and other constituents of milk have no substitutes. Therefore, every parent owes to himself and to his family the duty of providing re-

quisite amounts of milk, butter, cheese and other dairy products. During this last winter, when much agitation was had in some of the larger cities over the price of milk, which was advanced from two to three cents per quart by reason of the rapid rise in the cost of feed and labor, many families among the poor were found giving their children tea and coffee instead of milk. Such methods of feeding failed to nourish the child properly.

"The widest possible publicity should be carried on through public channels to bring these essential facts to the attention of all mothers.

"In spite of the shortage of milk in Germany, that country has at all hazards maintained the milk ration of the children and in the hospitals, even though to do so has meant that the adult population has had to forego largely its use. In a 'safety first' health campaign it must be remembered that it should be 'children first'.—United States Food Administration."

DON'T LET MILK SPOIL

In this time of need for food every effort should be made to prevent milk from spoiling. Cows should be kept clean and should be milked in clean surroundings into a small-top covered pail. All utensils which come into contact with the milk should be thoroughly sterilized with steam for at least five minutes, and milk should be cooled promptly at 50 degrees Fahrenheit or less and maintained at that temperature. Whenever these conditions are met, little milk will be wasted. In this time of terrible destruction of human life it is particularly necessary that milk be produced under such conditions as to insure a safe food for babies. This must be done by a decreasing number of men trained to do it. A great task and a great opportunity for dairymen are involved.

BETTER BREEDING HELPS

In dairying large production and profit go hand in hand. Breeding furnishes the most economical way to obtain large producing cows. The pure bred bull, with generations of high producing ancestors back of him, must be used for breeding, and only the best heifers from the best cows should be chosen to be the dams of the next generation.

Bargains in Holsteins

FACT NO. 1—A. W. Morris & Sons Corporation, Woodland, Cal., have developed a herd of registered Holsteins that by sheer merit both in production records and show ring records has become known throughout the whole world as one of the greatest herds of the breed, and in some respects as the greatest herd of dairy cattle of any breed ever owned and developed by one firm on one farm.

FACT NO. 2—Of the five herd bulls in service in the Morris herd, every one of them has sired a world's record daughter or has for a dam a cow that made one or more world's records. No other herd in the world, using five herd bulls, can equal this.

FACT NO. 3—In this sale A. W. Morris & Sons Corporation will sell many of the tremendous producers that have helped to make their fame world wide, and these great females are in calf to one or the other of the five master herd bulls.

FACT NO. 4 — The Morrises are retaining in their herd the daughters of these splendid cows, and they will be developed to their fullest capacity. Remember then that the calves these cows are carrying are brothers and sisters to the heifers upon which the Morris company are centering their whole breeding effort and skill.

FACT NO. 5—Every animal in this sale is positively guaranteed to be a breeder. We who have had an opportunity to observe the Morris methods at close range, know what a Morris guarantee means, and know well their firmly rooted policy of giving those who buy from them an absolutely square deal, even to the benefit of a doubt.

FACT NO. 6—In spite of the fact that world famous cows, daughters of world famous sires and dams, bred to the greatest combination of herd bulls on earth, will be sold in this sale, the sellers expect only modest prices to prevail. They instruct us to be perfectly frank in our announcements of this sale, emphasizing the fact that some of the most noted cows are along in years, that some have lost quarters, and that no animal in this sale will be tuberculin tested, but that regardless of what you bid on any animal in this sale, every single one will be sold to the highest bidder absolutely without reserve or limit.

GREAT WAR LOANS

The following are the greatest war loans made by various belligerent nations:

British victory loan early in 1917, five per cent. Total subscriptions, $5,096,245,320.

United States Second Liberty Loan, four per cent. Total subscriptions, $4,616,000,000.

Eighth German war loan, 4½ per cent and five per cent. Total subscriptions, $3,600,000,000.

French war loan of 1915, five per cent. Total subscriptions, $2,261,864,409.

Austrian seventh war loan, five per cent. Total subscriptions, $1,150,000,000.

Italian fourth war loan, five per

cent. Total subscriptions, $1,000,00,000.

Hungary seventh war loan, six per cent. Total subscriptions, $600,000,000.

Canadian victory loan, November, 1917, 5½ per cent. Total subscriptions, $418,000,000.

PLATFORM OF THE LEAGUE TO ENFORCE PEACE

We declare that it is the supreme task of the civilized world to crush the insolent attempt of German autocracy to substitute a military dictatorship for self government and the right of independent thought. The world must be made safe for democracy by the defeat of German militarism. We want no peace without victory, and we demand victory so complete and conclusive that military ambition will be forever silenced and a peace secured that will make an end of war. The world must be kept safe by the coperation of the major force of mankind, and that force should be organized by a league of nations to keep the peace of the world. And we favor the entrance of the United States, after the war, into such a league of nations as may be adequate to safeguard the peace that must be won by the joint military forces of the Allied nations.

"SPY AND PAID LIAR"

Here is a personal message to you straight from the front. It is reprinted from "The Stars and Stripes," the paper that is written and printed by members of the American Expeditionary Force in France—the men in the trenches—with the approval of General Pershing:

"Beware of the man who, no matter what his uniform, no matter what his nationality, comes to you with tales of Germany's invincibility, prophesies that 'the war will end in a draw,' and so forth. If he is saying such things

on his own account, he is a German propagandist, a spy, a paid liar, and should be reported and punished as such. If he is repeating them secondhand, he is nothing but an ass, a dupe of some real propagandist, and he should be reported and punished just the same."

UNITED STATES SUGAR OUTLOOK

Need for additional sugar conservation in the United States is reflected by estimates of our domestic beet sugar crop this year. After securing and averaging estimates from the three most trustworthy sources available the food administration finds a probable decrease in domestic beet sugar production of 5.2 per cent compared with last year. This represents about 38,174 tons of sugar less than in 1917.

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW

SAN FRANCISCO

NOV. 2-10, 1918

Largest Exclusive Livestock Show ever held on the Pacific Coast. $38,000 in Premiums.

THE HORSE SHOW ALONE WILL BE WORTH THE TRIP. Daily Exhibitions by the highest class of horses ever seen on the Pacific Coast.

Grand Champion Herd

—OF—

Hampshires

I have for sale on my ranch in Boquet Canyon, some excellent bred sows and open gilts, and also some weanling pigs. The bred sows and gilts are mated to Director, Jr., Grand Champion boar at Sacramento, Cal., 1918, Malays Controller, first prize Junior Yearling Boar, 1918. The pigs are sired by Director, the sire of my Grand Champion boar, Director, Jr., who is only a March pig, an extraordinary occurrence. This young boar has been pronounced by those who have seen him to be one of exceptionally fine quality and his breeding is surpassed by none. You could not do better than to get a sow or gilt bred to him.

Visitors are always welcome at my ranch where the best stock is for sale at all times.

Be sure to see my exhibit at the Liberty Fair.

Come and See us at the Liberty Fair

Fresno District Fair

Written for California Cultivator by R. P. Royce

IT WAS hardly to be expected that the twelfth annual Fresno District Fair would register any substantial increase either in point of exhibits or attendance over last year. California is in the war and Fresno County is too. Naturally war conditions had their effect on the show, but in spite of the war, shortage of labor and the early rains the annual exhibit of the Fresno district proved to be just about "the biggest little fair" held in California this year.

Rains during the first two days militated against the attendance. Considerable fruit was on the trays and more or less alfalfa had to be taken care of. Clearing skies the latter part of the week brought out the crowds, and on Friday the grounds were jammed with visitors.

The agricultural and fruit exhibits were very attractive and quite complete. The county farm bureau and the farm centers of Kerman, Selma, Reedley and Clovis were largely responsible for the showing made in field and orchard products.

A particularly good exhibit of tractors was made up by the following companies: Lauson, Best, Holt, Samson, Yuba, Bean, Fageol, Avery, Fitch, Case, Moline, Monarch, International, L. A. Auto Tractor, Staude, Emerson, Bear Cat, Fordson and Beeman.

The general display of tractors, trucks, automobiles and farm machinery would have been highly creditable for a fair of much larger proportions.

Harness racing was practically eliminated, a fact that held very little encouragement to those who in the past have protested that "people went to see the races instead of pigs and pumpkins." There is a wide movement throughout the country towards eliminating racing at county fairs, but it is the writer's opinion that most fair managers could begin the elimination with a different feature. Just why good clean racing should be discouraged and side shows and carnivals permitted is rather hard to understand. Surely the usual string of fakirs, "curiosities," monstrosities and bally-hoos can be dispensed with to better advantage than racing. Again, it would seem that the general culture of the community is not greatly improved by placing a ban on races and yet permitting the usual rodeo features necessitating the "busting" of a lot of old horses, showing plainly their service under the saddle. Perhaps the other features will some day be eliminated. Let us hope so. A motto adopted by a little county fair in the Middle West should have wider application: "A Fair for Farmers—not Fakirs."

The entries in the live stock division held up remarkably well. The show of horses and mules was hardly creditable, but the hog and dairy cattle divisions staged excellent shows. The sheep department was also quite well filled—nearly 100 head being on exhibit.

Only one herd of beef cattle was in the stalls.

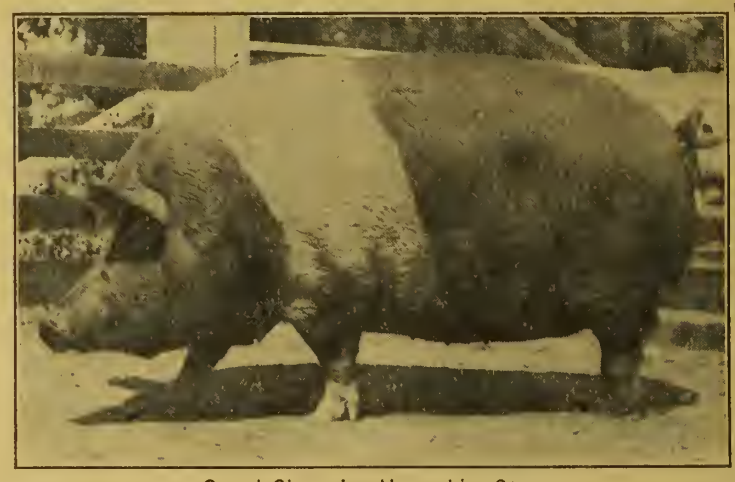
HOLSTEIN SHOW

Holsteins from the herds of Higdon, Vogel, Phillips and Helm came before E. W. Major for rating. The Higdon entries got away with most of the higher placings, but the Vogel two-year-old bull, Crown Prince Segis 25th, landed first place over Higdon's King Korndyke Pontiac 20th, that was second in class at Sacramento with the Fresno winner in fourth. The decision was close but the judge preferred the stronger top, neater tail head and better handling qualities of the Vogel bull to the splendid fronted Korndyke Pontiac 20th, who was carrying a bit more meat and a thicker hide.

Phillips had the only entry in the aged bull class.

The two senior yearlings did not make a particularly strong show.

The senior bull calf class was headed by Higdon's Model Bonnie Fobes De Kol. This very atractive youngster is so nicely fronted, so full of quality and possesses such excellent handling qualities that he was later made junior and grand champion.



Grand Champion Hampshire Sow

Elmira, who was queen at the state fair and will be one of the Conejo bunch at the California Liberty Fair.

The junior bull calves were topped with Higdon's state fair winner.

Higdon's aged cow, Model Bonnie Echo, had everything her own way right through to the championship. The Phillips cow looked a bit too old.

Higdon took first place in the two-year-old class over two entries of Vogel's. Some might criticise the winner for being a trifle meaty but her good middle and nicely balanced udder rather offset that objection. The second cow was perhaps stronger in her top, but she was hardly large enough and lacked udder development.

In the junior yearling class Vogel's entry stood between Higdon's two.

15,000 to 30,000 Pounds of Milk

Seventy-seven cows have been admitted to the Holstein-Friesian Advanced Register that have produced 7,000 to 15,000 quarts of milk in periods of ten months to a year. The capacity of the Holstein cow for milk is a matter of extraordinary interest.

If interested in

HOLSTEIN CATTLE

Send for our booklets—they contain much valuable information.

HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA, Box 120 Brattleboro, Vt.

The winner, who was afterwards made junior champion, is by the same bull that sired the grand champion bull and is quite like him—showing a lot of quality and breed type.

The senior and junior heifer calves were quite nice but not outstanding.

The Higdon entries made a clean sweep in the group classes. Phillips was second in the aged herd, second on produce of dam and third on get of sire. Vogel stood second with his calf herd.

The awards:

Aged Bull—1, Segis Pontiac Mead, Phillips.

Bull, two-year-old and under three—1, Crown Prince Segis 24th, Vogel. 2, King Korndyke Pontiac 20th, Higdon.

Bull, senior yearling—1, Fidelia Prince Newtonia. Vogel, 2, F. M. Helm.

Senior bull calf—1 and 2, Model Bonnie Fobes De Kol Spofford Pontiac, Higdon. 3, Count Pietertje Ormsby Burke, Phillips.

Junior bull calf—1, Higdon. 2, Vogel. 3, Phillips.

Aged cow—1, Model Bonnie Echo, Higdon. 2 and 3, Phillips.

Cows, two-year-old and under three—1, Owen Pontiac Burke, Higdon. 2 and 3, Margaret Aurelia Burke, Kathleen La Verne, Vogel.

Junior yearling heifer—1 and 3, Fay Tritomia Hengerveld Walker, Trout Brook Pontiac Walker, Higdon. 2, Westlawn Cream Mechthilde, Vogel.

Senior heifer calf—1 and 3, Miss Bracelet Fobes Korndyke, Pearl Pet Walker, Higdon. 2, Leola Lifretta, Vogel.

Junior heifer calf—1 and 3, Miss Tulare Champion, Miss Segis Alcartra Prilly, Higdon. 2, Easter Bonnet, Vogel.

Senior champion bull—Segis Pontiac Mead, Phillips.

Junior champion bull—Model Bonnie Fobes De Kol, Higdon.

Grand champion bull—Model Bonnie Fobes De Kol, Higdon.

Senior champion cow—Model Bonnie Echo, Higdon.

Junior champion—Fay Tritomia Hengerveld Walker, Higdon.

Grand champion cow or heifer—Model Bonnie Echo, Higdon.

Aged herd—1, Higdon. 2, Phillips.

Calf herd—1, Higdon. 2, Vogel.

Produce of dam—1, Produce of Jewell Queen, Higdon. 2, Phillips.

Get of sire—1 and 2, Get of Mutual Fobes Longfield De Kol, Get of Prince Riverside Walker, Higdon. 3, Phillips.

JERSEY SHOW

J. E. Thorp of Lockeford and Guy H. Miller of Modesto staged the Jersey show and divided honors fairly equally.

Bulls

The aged bull class was easily won by Miller on Altama's Interest, the Sacramento champion. However he did not have easy going all the way, as the two-year-old, Jolly's Senator Raleigh, gave him a real tussle for the senior championship. This bull is coming on and might be "bad medicine" next year.

Thorp had the only entry in the senior yearling class and Miller showed the only junior yearling. Miller won both the calf classes.

The Females

The three aged cows kept their state ratings, Salome of Mossdale winning, with Goldie of Venadera standing ahead of Valet's Golden Biddy. Miller showed a very good two-year-old, Angela of Venadera. The senior yearling class was hardly up to the average, both the Thorpe entries being quite a little undersized. Lucille of Venadera, owned by Miller, won and was later made junior champion. Miller was first and second on junior yearlings. Thorp was first on senior and junior heifer calves.

Thorp had the winning aged herd. In the group was one entry not shown in the open class. Miller's good young stuff won the young herd and calf herd. Thorp won first on the produce of Violet of Sunnybrook and first on the get of King's Valet.

The Thorp herd also won the "Dairy Special"—a very unusual class. This class called for one bull three years old or over; one bull under three years; four cows over three and four under three.

The awards:

Aged bull—1, Altama's Interest, Miller. 2, Imp. of L, Thorpe.

Northern California Livestock Notes

Written for California Cultivator By W. S. Guilford

SWINE BREEDERS ORGANIZE

AT A meeting held at Orland September 28, the Glenn County unit of the California Swine Breeders' Association was organized. This is the first county unit to be formed in the state.

The Glenn County unit will work with the Glenn County farm bureau in every way for the good of the industry—and the president and chairman of the board of directors is a member of the board of directors of the farm bureau organization.

The first thing to be done by the Glenn County unit is to secure a large membership for the association.

Officers of the Glenn County unit are as follows: Wm. Durbrow, Willows, president; D. A. Shelloe, Glenn, vice president; Mrs. E. A. Hardy, Anchorage Berkshire Farm, Orland, secretary-treasurer. Executive committee: Wm. Wyler, Glenn; Geo. Ellis, Willows; Jas. Mills, Hamilton City; S. J. Yates, Orland; C. N. Slocum, Willows; W. W. Foster, Butte City; and H. E. Watson, Orland.

A BIG AGRICULTURAL EXHIBIT

Horticultural Commissioner Hugh Wren believes in taking time by the forelock. He is preparing now for the agricultural and horticultural exhibit at the Glenn County fair at Orland.

During fair week he had a blank form on which all who are growing crops that should be exhibited could sign. As horticultural commissioner, he will give every assistance possible in the growing, spraying and treatment of these crops during the year, so that they may be the best that can be grown.

He is interesting growers of dried fruit and nuts to prepare their exhibits now—from the best of the 1918 crop for 1919—because the fair is held too early to allow these exhibits to be put up in the best form from the 1919 crops.

While the 1918 fruit and grain show at Orland was splendid the 1919 exhibit will be one worth going many miles to see.

FAIR JUDGING PROGRAMS

About two weeks before the Minnesota State Fair this year, the judging program of the swine department was mailed to every hog breeder in the state. Then the judging of the various breeds and classes started promptly as advertised—and there was a large attendance of interested people.

This is a plan that can well be followed by all fair managements.

FALL FEED

As a result of the early September rains and the warm, showery weather that has followed there is green feed everywhere and great rejoicing among stock men.

Sheep and cattle should go into the winter in fine condition and good calf and lamb crops result.

Making Hogs Pay

The following advice is given in an article by Dr. R. H. Williams, Animal husbandman of the University of Arizona:

The hog business has had serious set-backs during the past year on account of the market price of hogs not having gone up in proportion to the cost of producing them. In spite of the present difficulties, it is believed that hogs may be raised to advantage by farmers. To do this these animals must be maintained in relatively small numbers on farms where there is considerable waste, such as skim milk, spoiled fruits and vegetables, grain fields to glean, and unmarketable grains. Hogs should pay a handsome profit if handled in this way. Some points of vital importance for hog raisers in Arizona may be mentioned as follows:

1. Do not over-stock, but keep a few hogs, perhaps one brood sow on every farm.
2. Feed the animals on foods which would otherwise be wasted or marketed with difficulty.
3. Give the animals green alfalfa pasturage, and also concentrated foods.
4. Feed young pigs well until they are ready for market.
5. The best time to market is usually when the pig weighs about 160 pounds.
6. Provide shade and fresh drinking water.
7. Do not exert hogs during warm weather.
8. Use self-feeders for finishing market hogs.
9. Prevent hog cholera by vaccination if this disease is in the district.
10. Do not feed lice, but kill them by means of using the dipping vat or rubbing crude oil over the body.
11. Aim to improve the quality of your hogs by keeping only the best individuals.

More Sheep

Some time ago some one in describing the condition of the sheep industry in this country made the very elucidating statement that if all the wool grown in the United States last year were made into pure-wool cloth, and the cloth were cut and divided equally among the men and women of this country, there would be about 44 inches of such cloth to each person, and if the present decline in wool production continues for a few years longer there won't be enough to make a respectable breechcloth per capita. Better get some sheep.

In 1850 the average number of sheep

All Wool and a Yard Wide

per farm in the United States was 15, but in 1910, there was an average of a little over eight sheep to the farm. The government told us not long ago that our wool production has declined since 1910, the total production of last year being nearly 36,000,000 pounds less than seven years ago. The war is increasing the consumption of wool It requires the wool from a flock of 200 sheep to clothe and euip ten soldiers for the European battlefield. As the soldiers must have the wool, some of the rest of us stay-at-homes will have to be content with cotton clothing, and it makes us tremble to think what would be our condition if cotton production were not maintained. We might have to go back to the styles worn in the Garden of Eden, and clothe ourselves in fig leaves and blushes.

Seriously, there is an urgent need for an increase of sheep on our American farms. Every farmer should have a small flock. — Indiana Farmers' Guide.

MAKING ALFALFA SILAGE

Continued from Page 361

own shortage of feeding stuffs is such that if they are to keep alive their dairy herds, they must have a larger supply of wheat milled.

Already the milk supply in the Allied countries has been limited practically to the supply of children and other vitally necessary national uses, and any failure on our part to supply them with necessary feed stuffs for their dairy herd means that we shall cut into the actual safety of the children amongst the Allies. On the other hand, both our own population and the Allies are dependent upon our production of animal products, and we do not in any way wish to stifle this production. What we must secure is the utmost conservation in feed and the total elimination of waste by the careful feeding of animals and the use of all the roughage available.

Dairy Production is in Danger

One of the difficult problems is the distribution of wheat mill feeds, and this is made more difficult by the fact that the food administration, in an endeavor to protect the farmer, is maintaining an artificially low price on these feeds. One consequence is that a great deal of mill feeds are now going unnecessarily into work animals or beef production. Every farmer will recognize that the wheat mill feeds are vitally necessary for the dairy cattle, to some extent for the poultry, and for young pigs. Owing to the absorption of mill feeds at local points near the mill, considerable sections of the dairy industry are practically without mill feeds and our dairy production is thereby in danger.

A Pledge of Honor

With view to correcting this, so far as possible, the food administration desires to appeal for the asistance of the farmers of the country in the use and distribution of wheat mill feeds, in addition to general conservation of feeding stuffs. In this view, we are asking every buyer of wheat mill feeds, outside of the acute drouth area, to sign a pledge of honor not to use the wheat mill feeds for any purpose except the essential use in dairy, young pig and poultry production, and not to purchase or hold at any one time more than 60 days' supply. Unless we can secure this careful and specialized use of mill feeds, our dairy production in the congested eastern areas of the United States is bound to fall and to jeopardize the food supply of our people in that section. Otherwise it will be necessary to release the price restrictions on mill feeds and allow them to take their natural course.

With a view to securing this cooperation from the farmers all over the country in the interests of their industry as a whole, we are instructing the mills and all dealers in feeds to secure from the buyer of wheat mill feeds the following pledge:

"In order to assist the food administration in the distribution of wheat mill feeds, I hereby undertake on honor not to use wheat mill feeds for any other purpose than the feeding of dairy cattle, poultry, young pigs, or young calves, or the preparation of a weekly bran mash for work animals.

"I will not feed any more wheat mill feeds than is customarily fed to such animals, and I further agree not to have at any one time more than a 60-day supply of wheat feeds on hand."

The Jersey

Dollars in profit go with Jerseys. They actually "milk money." They feed less. They look real value. Jerseys are a gilt-edge investment for the one-cow home or the hundred-cow dairy farm. SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards six times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) and for Dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand Refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

Produce of dam—1, produce of Violet of Sunnybrook, Thorpe.

Get of sire—1, get of King's Valet, Thorpe. 2, get of Altama's Interest.

AYRSHIRE SHOW

E. B. McFarland, San Mateo, was the only exhibitor of Ayrshires. This herd always adds strength to any show and the splendid breed promotion work being done by Mr. McFarland is beginning to bear fruit. The California dairyman can not fail to be impressed with the splendid qualities of this Scotch breed and the future will surely see many Ayrshire herds in this state.

SHORTHORN SHOW

As noted above only one herd of beef cattle was on exhibit. This was the Maxwell & Miller herd from Steamboat Springs, Colorado, that has come West for the coast shows. The cattle were on the road six days and showed the effects of travel, but by the opening of the Los Angeles show they should be in much better form. The herd is headed by the roan two-year-old, Princely Stamp, a grandson of Sultan Stamp. He is a bull of considerable scale but needs width and depth to overcome his appearance of being a bit upstanding. He is quite attractive in front, with a bull's head and a lot of character.

Two junior yearlings—a roan by Earl of Avondale and a white son of Gainford Archer 2d, stood in the order named. The winner having a stronger top and better heart.

The roan senior calf is about as attractive as any of the bulls. The calf by Earl of Avondale and out of a Queen of Beauty dam could have been placed above the two-year-old for the championship and not looked out of place.

Among the females the thick roan two-year-old, Cloverleaf Lovely 2d, by Maxwalton Sultan that was made senior champion, and the very attractive white senior heifer calf, Flora of Anoka, by Lavender Sultan, are rather outstanding. However, the calf was easily grand champion. She is a sweet thing, very even in her lines, and particularly nice about the tail head.

Swine awards next week.

AVOCADO DAY AT LIBERTY FAIR

Saturday, October 19, will be Avovado Day at the California Liberty Fair. The California Avocado Association will hold its seventh semi-annual meeting on that day in the auditorium on the second floor of the State Exposition building at the fair grounds, Exposition Park, Los Angeles.

An interesting and popular program is being arranged. The annual address of the president will be made at this meeting. There will be a paper by Wilson Popenoe, covering his recent investigations of avocados in Mexico. Among other speakers will be Juan Murrieta, recently elected an honorary member of our association; J. M. Elliott, vice-president of our association; E. M. Chace of the U. S. department of agriculture; Dr. J. Eliot Coit, Los Angeles County farm adviser.

1918 GUARANTY SALE

The 1918 Guaranty Sale of registered Holsteins promises to far surpass anything heretofore attempted in the way of Holstein sales in the West. It will be held on Thursday, December 5, at Sacramento on the state fair grounds. The sale was approved by California Holstein-Friesian Association, and President Fred W. Kiesel appointed James W. McAlister, Jr., Chino, Frank L. Morris, Woodland, H. V. Bridgford, Knightsen, and C. L. Hughes, Sacramento, as the four members of the committee of selection. The committee started its work about the 20th of October and has secured some of the highest record cows and daughters of the highest record cows ever made available for public sale in the West. It will be remembered that last year the 1917 Guaranty Sale consisted of 72 head that averaged $957 per head. When it is stated that the committee this year started out to pry loose from leading breeders a herd of cattle that would be likely to surpass last year's average, some idea may be had of the extraordinary requirements made for entry in this sale. The sale will be managed by California Breeders Sales and Pedigree Company, who made such a signal success of last year's sale.

CALIFORNIA CREAMERY OPERATORS' CONVENTION

California Creamery Operators' Association will hold its annual in Visalia, Tulare County next week, October 17-19. There will be a butter scoring contest under supervision of the association. Addresses on "Cow Testing Associations" by E. H. Webster; El Centro; "Cooperative Bull Associations" by Prof. F. H. True, University Farm; and "Shall California Have a Proprietary Feed Control Law" by Geo. R. McLeod. The last large questions" by Prof. G. H. True, University Woll, University Farm. Other addresses are: "Business Phases of Dairy Manufacturing" by Dr. C. L. Roadhouse, University Farm; "Work of United States Bureau of Markets" by L. M. Davis; and "Standardization of Creamery Butter" by S. L. Denning, University Farm. Other addresses by C. F. Doane, S. H. Greene, J. P. Murphy, W. R. Roussel and N. Knudsen.

MODEL S-25

SAMSON SIEVE-GRIP TRACTORS

GMC TRACTORS GMC TRACTORS

Farmers have abandoned slow, laborious methods of days gone by. Horse power and hand tools have given way to the tractor and its accompanying implements. For this reason, the demand for increased food production can be met in spite of shortage of labor and horses. As the tractor will be the most potent instrument to accomplish this happy result, how important that you select one best fitted to meet your needs, strong, simple and durable, developed and perfected through many years of actual field service.

THE GMC SAMSON SIEVE-GRIP TRACTOR meets every requirement. It does the work of ten horses, better, faster and cheaper, and is adapted for countless tasks, stationary and otherwise, for many of which horses are not suitable. It has been a demonstrated success for many years.

Its sieve-grip wheels do not pack the soil. They assist cultivation. Air entering its carburetor and crank case vent is washed and freed from dirt and grit, assuring long life to all working parts. Its lubricated roller pinions reduce friction to a minimum and deliver maximum power to the drawbar. Its automatic control secures ease and reliability of action.

For continuous satisfactory performance, buy a GMC SAMSON SIEVE-GRIP TRACTOR. Ask the man who owns one or send for our booklet, Better Farming.

THE BOY NEXT DOOR

By Will M. Cressy

My life's been pretty happy; I've had a lot of joys;
We've only had one sorrow (we never had no boys).
But I've got a little daughter, and I know she has a store
Of love, and trust, and longing for that boy next door.

And when that fateful day arrived, when we knew we'd got to fight,
I forgot the way I'd voted—for our President was right.
I couldn't go to battle; I was old, and stiff, and sore.
But the first one that enlisted was that very boy next door.

And, by Jove, I'm right behind him, with every cent I've got,
To buy him food and shelter, powder, guns and shot;
And, if God will just watch over him and bring him back once more,
I expect I'll be a daddy to that very boy next door.

Now, there's a lot of us old fellers, too old to go and fight,
With no sons to represent us and battle for the right;
But we can give our money, as we never did before,
And love, and hope, and courage—to the boy next door.

HILLSBORO'S BIT

(Continued from last week.)

The season passed, and the crops grew. It wasn't a wonderful season cold and wet and backward; but somehow the crop on that western slope beat all the rest. Parson Wilbur said 'twas blessed, and I guess it may have been. I suppose every able-bodied man in Hillsboro put in some time there, and the women would have if we'd let 'em. There's mighty little in peace or war you can keep the women out of nowadays. But we chased 'em back to their knitting and carried on, as the saying is, by ourselves.

For my part, I don't know that there was much charity in what I did. Chopping weeds is mighty outletting for the feelings, sometimes. When little Doc went away he left his family in the house he'd built right opposite mine, and Allen's wife and baby came to stay with 'em. As far as money went, the girls made out very well on what the boys could send, for little Doc was getting more than he ever had in Hillsboro—not that he'd gone for that—and Allen had got a lieutenant's commission in the engineers; but both families missed having a man at the head mighty bad, and it sort of came to me to fill the lack as well as I could.

I started in cheerful and thoughtless, for I'd brought up one small family, without sparing unduly the rod or the spank, and with a fair amount of credit, I think. But 'twas soon borne in on me I'd been a trifle brash about undertaking any more. There's something about a grandbaby that softens my harsh old hand out of all sense, and it didn't take little Phil Seagraves long to find it out, either—the leetle blue-eyed scamp! You ought to have seen him laugh the other day after he'd fired the shop key into the pond, and I had to climb in through the window! If little Al or Tommy'd done that—Yet, somehow, it's always "next time" that I'm going to spank that youngster. And little Millie's just like him, as far as a two-year- old can be. Little Allen Orramel's still in his cradle, thank goodness, and I do hope his dad will get back before he gets out.

Sometimes I used to go out to the Red Cross cornfield in the early morning before time to open the shop, and it frequently amazed me, the people I'd find there. Old Tom Finden, the town drunkard, the nearest-to-worthless character we've got—hadn't done a stroke of work in years except to keep himself in whiskey and hard cider—used often to come down in the early light; but he'd always shoulder his hoe and hobble off if anyone came near or tried to speak to him. I know, because, thinking that the old chap couldn't have had a meal of decent woman's cooking for years, I tried several times to ask him over to breakfast. But I never made out. So sometimes, if I saw old Tom there, I'd send a youngster to tell ma to send a good snack to Finden's shanty, and when I judged it had arrived I'd sort of edge the old man off. But I've wondered since whether he really liked it. It might have seemed like some one was trying to pay or bribe him; and I reckon there aren't many, even like old man Finden, but like to do a free and decent thing, now and then for a cause that's bigger than they are.

I guess even the old tight-wad, Squire Dickerman, could see that we were getting out more than we put in, harvest or no harvest. It was mighty little to do, while the boys were gettin gready to give their lives; but thinking we were doing something sort of saved our self-respect, and that everyone was helping to do it together added to our respect for one another. Somehow our backs never got so tired working in the Red Cross cornfield, and there was a whole lot less tendency to cuss if something broke than if we'd been doing our own work.

I remember now how one day Brad Gregory was cultivating corn while Tiph Jackson was hilling up potatoes on the opposite side as far away as he could get, for they hadn't spoke since Tiph shot some of Brad's hens for scratching up his strawberries ten years ago. Brad, perhaps, was thinking about his boy Joe, who was crossing the water about that time, for all of a sudden he ran smash into a rock and busted the cultivator out of all use. Tiph kept on hoeing, but now and then he'd glance over where Brad was picking up the pieces. His boy hadn't gone over, but there was no telling when he would. And Tiph knew that Brad had a big field of corn of his own that was spoiling for cultivation. He kept hoeing slower and slower, and by and by, when Brad had the pieces picked up and had started for home, Tiph came stamping over.

"Brad," says he "take my cultivator out of my tool shed and use it till you get yourn fixed."

And that wasn't the strangest part of the matter. Brad took it!

September came, and it was cold and wet. Potatoes had done well and were almost ready to dig. Beans were fine, and hard in the pod, though late planted. Corn was still in the milk, and prospects looked mighty dubious, for two or three more weeks were needed to make anything of it. And

the month wasn't many days old when the frost came. We knew it at sunset. The wind had been high after a cold rain, but it dropped with the sun and the sky cleared. In the morning that fine field of corn, and thousands more like it, wouldn't be worth 30 cents.

Quite a shivering bunch of us collected to mourn over its passing and debate whether we hadn't better cut as much as we could and lay it down for ensilage. There didn't seem to be much else to do.

Then Brad Gregory spoke up. "When my boy Joe was goin' across, one of them pesky U-boats showed up some miles off, and the captain of the transport slung a lot of sooty stuff into the fire boxes and sent up a big cloud of smoke that covered all the ship and acres and acres besides, so's't the pesky U-boats couldn't find it."

"What's that to do with us?" says I.

"Smoke's hot, as well's thick and all the time moving, aint it?" says he. "Now if we strung a smudge along all the west side of this cornfield, what wind there is and the slope of the ground'll carry the smoke and the warm air up across this corn, and who knows but what we might save some of it?"

"It's worth tryin'," says Tiph Jackson. "And all this west slash from the lumber lot alongside'll smudge fine."

So we telephoned all over town for help, and things moved considerable lively for a while. Everyone dragged brush in the falling darkness; even old man Finden turned out and fetched quite a few limbs. Before the mercury crossed the line, we got fire started all along the field. We begun to have some hope.

But the thermometer fell fast, awful fast. It surely was the rippingest frost for the time of year I ever did see. It was plain the upper edge of the field, at least, was going to get nipped.

"We c'n save that yet," says old man Finden. 'Twas the first word he'd spoken that evening.

"How?" says I.

"Git Washy Perkyn's power sprayer, and spray the air along the edge with hot water."

Some of the folks didn't believe that would work. The hot water would scald the corn as it fell, they said, and then it would cool off and freeze on the leaves before the machine could run to the other end of the field and back.

"I believe it's worth tryin'," says Tiph Jackson; and Brad Gregory and most of the rest of us thought so, too.

So we hustled off and got that power sprayer. It was locked in a shed, and Washy's caretaker was away, but we picked the lock with a sledge hammer and rolled the thing out. It was a powerful old elephant. Washy got it a year or two back when the bugs got into those big old elms he's so powerful proud of. The tank is mounted on a big auto truck, and the engine runs the sprayer. It squirts like a young fire engine and cost the price of a good farm. We ran it down to the field, where the boys had already heated water in big kettles, and started. First thing she stuck in the soft, wet earth of the bean patch like we might have known she would. Then all hands had to take hold and push her on to a sort of railway we made of the stacked planks of the lumber lot.

I guess even Kaiser Bill—drat him!—would have laughed if he'd seen us that night, lugging brush by lantern light and heating water and carrying planks and squirtin that old popping, fiery dragon, but I don't remember then noticing how funny it was. For one thing, someone had to stand in the cornfield at first and judge whether the water was coming down too hot. And of course I was some one. But my jacket was pretty wet, anyhow. I reckon the united steaming sweat of Hillsboro that night raised the local temperature at least a degree or two and maybe was what saved the day, or night rather.

Anyhow, when morning dawned there was no frost on that corn, though every stalk outside for a hundred miles each way was bleached white and ruined. Not another hint of frost came for three full weeks—weeks of fine corn weather, too; and then we were ready for it.

The proceeds of that field fitted out a fine big ambulance for "over there," and some besides. We old men can't fight the Kaiser like Allen and Tom and the rest of the boys, or even fight death for the fighters as little Doc'll do, but we like to think that where the need is the wagon we worked and paid for will do our bit for us, as far as a thing of wood and steel can do. And perhaps there'll be in it—machinery's mighty human sometimes—a spark from the soul of each of us who couldn't go, who wait back here in the old home hills for the word that may bring to us the battle and the bitterness, the last word of some of those who must give their all and, giving it, give our all.—Youth's Companion.

GRAPE SYRUP

Written for California Cultivator
By Mrs. Linda W. McNeil

I have been experimenting with grape syrup. Having seen the many suggestions of a possible new source of sweetening, the next thing was to try it. So, with Baby June trudging behind me I went to the vineyard for the "makings" of the new syrup.

For the first batch I gathered a variety: Muscat, Tokay and Cornichon. This proved very satisfactory, the result being a clear, amber syrup much sweeter than any of the syrups of commerce and a delicious accompaniment to hot cakes for breakfast. As a further experiment it was tried in coffee, where it proved not unpleasant, although very different from sugar. For one who is fond of lemon in either coffee or tea, it would surely be agreeable. Tried it in cocoa with the same result; a strange but pleasant flavor was imparted to the beverage.

The next experiment was with cookies. This was the way they were made: One egg, two-thirds cup grape syrup, level teaspoon ginger, one-half teaspoon cinnamon, scant teaspoon soda, one tablespoon fat; one-half cup white corn flour and sufficient white flour to make a batter which would drop from a spoon, a little salt. Drop from spoon on to lightly greased pans and bake till brown in a moderate oven. The "Goodman" said: "Best cookies I've eaten in ten years." Baby June said, "Goody, goody," and reached for more.

Next time I made them a half cup or more of raisins was added with good results.

Next batch of syrup was made entirely of Muscats and was also very good, perhaps better than the mixed grapes.

Next experiment was the making of syrup from Phillips' Cling peaches. They make a lighter colored syrup of not so much body, but very good to eat. Have not tried it in cooking as yet. When the syrup is nearly thick enough and before it stops boiling, I added to it granulated sugar about one-half a cup to a pint of the syrup, which helped to give it body. If you grow grapes try it for yourself and see how good it is.

LET'S WIN IT!

Let's win it—the fight for the freedom of earth!
Its ghastly, its grim; no matter for mirth.
We may have been loath, have been slow to begin it,
But now we are in, let's win it! Let's win it!

Let's put aside boasting of what we can do,
And strain every sinew to see the thing through!
Let us waste not an hour, let us waste not a minute,
But since we are in it, let's win it! Let's win it!

Let's win it! Away with all selfish desires!
Let us think of our children, remember our sires!
Up, up with the Flag, every star that is in it!
The fight is our own, so let's win it! LET'S WIN IT!

—Life.

Silent pro-German appetites are as hostile to the Allied cause as disloyal utterances.

A Weatherproof Coat

In every Raynster there is a Raynster Label. That label assures you something more than just a raincoat. It is the sign of the best in weatherproof clothing of all kinds. It is the proof of full value for money received.

Buy a Raynster today and be sure the label is in it. Raynsters are good insurance of health and clothing for every member of your family.

There are Raynsters in all styles of weatherproof clothing. The heavy rubber surfaced kind for outdoor work; cloth coats suitable for dress or work, these are good overcoats as well as good raincoats; heavy ulsters that are warm and shower-proof, splendid for driving in cold or rainy weather. Raynsters are made for every member of the family and are priced according to materials and workmanship necessary to produce each particular kind—the label guarantees value for price—always look for it. Don't buy just any old raincoat when your dealer can get you a Raynster.

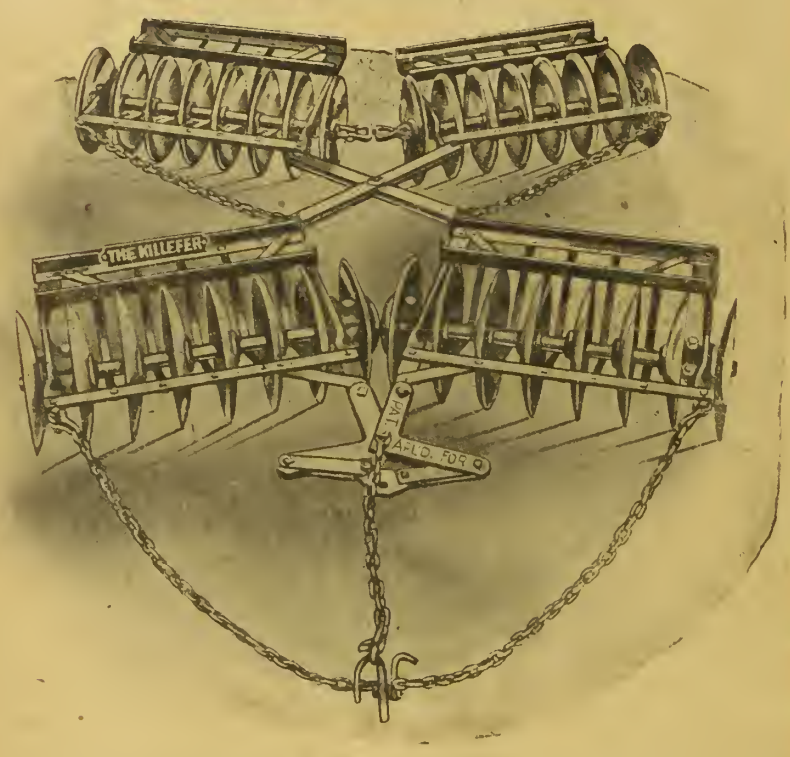
The Killefer Automatic Double-Disc HARROW

Killefer Efficiency — Killefer Quality



Working Position

Without doubt this is the most important development made in the manufacture of farm tools to date. This is the only Automatic Disc Harrow on the market. It was designed and built in our own shops completely. We are therefore the originators and have it fully covered by patents.

In the development of this, our latest triumph in Disc Harrows, we have not only maintained the greatest strength and durability as originally designed but have added additional valuable features, namely your

Automatic Shifting Device

controlled by the operator from the seat of the Tractor and a greater flexibility so desirable in a tractor disc harrow, but not found in other makes.

This Harrow is built in all sizes from 5 to 12 feet inclusive.
Orders should be placed now to insure delivery.

HAY

Under date of October 4, Scott, Magner & Miller says:
Receipts past week, 764 tons. One might state that there has been no market during the week and receipts of dry hay have been decidedly small. This wet hay has been sold according to the amount of damage shown. There has been some inquiry the latter part of the week for hay "in order" and no doubt a few arrivals of this kind would sell in excess of our quotations. But until such time as the damaged hay ceases to arrive and the dry hay commences to be drawn from the warehouses it will be very difficult to give a range of prices.
In the country districts grass was never known to be in finer shape than at present. The ranges resemble springtime. Stock men are all happy as they can see feed ahead for their stock. So the rain although it did a large amount of damage, to some has been of great benefit.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.

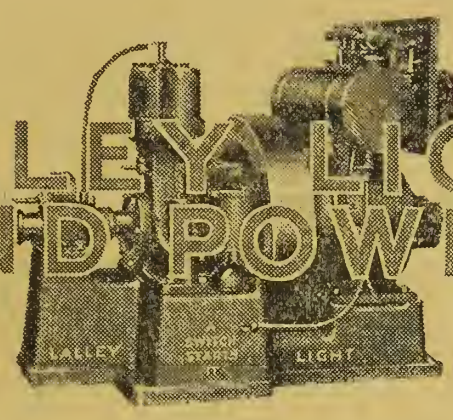
LALLEY LIGHT AND POWER



Pays for Itself by the Work It Does

Owners who make full use of its power possibilities, regard Lalley-Light as a paying investment.

It actually does pay its way because it saves much farm labor by furnishing power to do the work.

It is on duty, and ready for work—morning, noon and night — 365 days in the year. By government statistics, it is the one farm labor-saving device that is useful through the entire year.

Lalley-Light power churns butter and separates cream. It pumps water all over the house and to the barn. It runs a washing machine and a vacuum cleaner.

Its sure, safe light saves time in the barn mornings and evenings—in addition to wiping out the oil-lantern danger entirely.

Lalley-Light is a real farm helper in these ways no less than through the comforts and conveniences it brings.

It is easy to see that it soon begins to pay for itself; and finally returns a real dollars-and-cents profit.

The farm labor situation promises to be more acute next year than it was in the busy season just passed.

Lalley-Light's aid is well-nigh as important as the tractor's aid

See the nearest Lalley-Light merchant. He can show you, in figures, how Lalley-Light will pay for itself in a short time.

Write us, if you do not know his name, and we will send it, with Lalley-Light literature.

LALLEY-LIGHT

THE ELECTRIC LIGHT AND POWER FOR EVERY FARM

Unarmed Arms of the Service

Men from the battle front who have been holding the line for months and years complain of the monotony of war. The soldier's life in the trenches soon ceases to be a novelty and becomes a tedious routine.

The morale of the army is of supreme importance and the greatest military authorities of the world are enthusiastic in their praise of the organizations which make it their business to keep the soldier in good spirits.

This work, like that of the Signal Corps, has been more highly developed in this war than ever before. Huts for amusement, comfort and recuperation of the fighting men are in the trenches as well as behind the lines. The unarmed workers go about their duties under shell fire as coolly and as self-forgetfully as the telephone men of the Signal Corps who are frequently their neighbors, and who keep intact, often under a hail of bullets, the indispensable lines of communication.

It is for us who remain at home to support these unarmed heroes to the utmost, with our gifts, our labor, and our unbreakable morale.

We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

Quercus lobata or, if preferred, valley oak, California white oak, weeping oak, or, as called by the early Spanish-Californians, roble, occurs in California from Los Angeles County north, more particularly in the great central valley. It is one of our most beautiful native trees. The largest one in the state is in Round Valley. It is 150 feet in height and nearly 25 feet in trunk circumference four feet above the ground. The cover this week gives an idea of the majesty and wonderful beauty of the valley oak.

LIBERTY FAIR

The Spanish influenza has reached the coast. It has created havoc in all kinds of plans made by men. The results of the disease are not so serious as was feared, this probably largely because of the strong hand taken by health authorities of nation, state and municipality. Quarantines have been established; public meetings are taboo; fairs and all kinds of public events postponed.

The city of Los Angeles took action on the very eve of the opening of the Liberty Fair. Men and women had planned and worked for the past year in preparation for the first agricultural fair to be held in Los Angeles for nearly a score of years. Most of the exhibits were at least in part installed, and carloads of live stock were on tbeir way, some from distances of over 2000 miles. The exhibit of the government was ready for installation, as were many large shows and spectacular attractions.

But the boys in the cantonments and, in fact, national efficiency in every activity must be protected, and it was a moment almost tragic in the council chamber of the city of Los Angeles, filled to capacity, when the order was made that no pubic gatherings should be permitted. Los Angeles people are true sports, and after it was determined that the government exhibit and the live stock, some of which had been brought for 2000 miles, would wait a later date, it was determined to still hold a fair. It will be a great fair.

STRENGTENING LINES

The Cultivator's fight for more live stock and greater food production has resulted in adding to its force one of the best qualified live stock men of the West, Ralpb P. Royce, a graduate of the University of Missouri, for three years live stock field man with the Missouri Farmer and for the past two years assistant professor in the animal husbandry division of the University of California, who has taken work on the Cultivator force.

Mr. Royce has no promises, other than to do his best, but we know from commendations which come from our best live stock people that California live stock interests in general, especially the Cultivator, will be benefited by this strengthening of our lines.

POINTS FROM THE MESSAGE

"It must be clearly understood that the process of evacuation and the conditions of an armistice are matters which must be left to the judgment and advice of the military advisers, and no arrangement can be accepted which does not provide absolutely satisfactory safeguards and guarantees of the maintenance of the present military supremacy of the armies of the United States and the Allies.

"Neither the government of the United States nor the governments with which the government of the United States is associated as belligerents, will consider an armistice so long as the armed forces of Germany continue the illegal and inhumane practices which they still persist in. At the very time that the German government approaches with proposals of peace its submarines are engaged in sinking passenger ships at sea, and not tbe ships alone, but the very boats in which their passengers and crews seek to make their way to safety; and in their present enforced withdrawal from Flanders and France the German armies are pursuing a course of wanton destruction which has always been regarded as in direct violation of the rules and practices of civilized warfare. Cities and villages are being stripped of all they contain, often of their very inhabitants. We cannot be expected to agree to a cessation of arms while acts of inhumanity, spoliation and desolation are being continued which we justly look upon with horror and with burning bearts.

"It is necessary also, in order that there may be no possibility of misunderstanding, that the President should very solemnly call the attention of the government of Germany to the language and intent of one of the terms of the peace which tbe German government has now accepted. It is as follows: 'The destruction of every arbitrary power anywhere that can separately, secretly and of its single choice disturb the peace of tbe world; or if it cannot be presently destroyed, at least its reduction to virtual impotency.'

"The power which has hitherto controlled the German nation is of the sort here described. It is within the choice of the German nation to alter it. The President's words just quoted naturally constitute a condition precedent to peace, if peace is to come by the action of the German people themselves."

AN EXPENSIVE TRIP

The most expensive trip in all the world's history is being made today by one Uncle Sam and a few of his friends. It is a trip which is costing billions of money and the lives of millions of the earth's finest. Every day of delay increases these awful costs. Every shortage of supplies or of funds increases that delay. The American people have been appealed to, and the request, rather the command, is made that each shall do his share. And it is hoped that at least one-fourth, or 25,000,000, will heed. The time set for the final answer is midnight of next Saturday. The six billions has as yet, the middle of the week, been met by subscriptions totaling less than half of that amount.

The need is great; it is imperative that this command shall be obeyed. He who can afford one Liberty Bond and buys it is more of a patriot than he who can afford to buy 100 and buys 99. It is presumed that the next few weeks of this world war will be the bitterest of all. The Huns are desperate and it appears from incidents of the past week they will stop at no barbarity.

Everyone who has bought all he possibly can should buy still more. The greater the over-subscription, the more powerful the effect. So let us buy to support our government and to end the war more quickly, and as to our security, bear in mind that a Liberty Bond is as strong as all the banks and all the farms, all the mines, all the factories, all the people and all the power of the strongest nation on earth.

This Week's War Notes

American casualty lists often run above a thousand per day.

A quarter of a million refugees are leaving eastern Belgium for Holland.

The Bolshevik government at Moscow has agreed to release British officials who have been imprisoned.

Rumors by way of London indicate that the kaiser, Prince Max and the crown prince are ready to quit their jobs.

Regardless of peace notes Secretary to the President Tumulty announces: "The government will continue to send 250,000 men with their supplies every month, and tbere will be no relaxation of any kind."

Tbe Allies are still advancing in Serbia and practically control the line of communication between Berlin and Constantinople. During the past week Nish and other important points have been captured by forces of English, Serbs, Italians and Greeks.

The Italians are again in action, having won several advantages on the northeastern Italian front. They have occupied Durazzo in Albania and are pressing north along the Adriatic. They are also giving material aid to French and English troops in Serbia.

The submarine campaign has been pressed more ruthlessly than for many months. Secretary Daniels appeals for greatest speed in finishing of destroyers and sub chasers. Sir Eric Geddes of England says that the menace is greater today than it ever was that is, in the effort on the part of the Germans. There must be still more strenuous campaign against these vipers of the sea.

One of the most tragic events of the entire war was that of the sinking of the transport Otranto in collision with the steamer Kashmir. Nearly 400 American boys went to the bottom in the terrible storm which prevailed. Highest praise is given to the captain and men of the British destroyer Mounsey, which dared almost certain destruction in its effort to save men from the sinking vessel.

Berlin is in chaos as the people realize that the kaiser's "peace" program has been rejected because it was practically a camouflaged war movement. Socialists are bolder than ever. and demands are made, according to fairly well authenticated reports, that the government shall become one in which the common people shall be given justice. On the other hand, the militarists intend to make the war more revengeful and brutal than ever. During the past week two vessels, the Ticonderoga and the Leinster, were sunk, and in both cases men, women and children in rowboats were fired upon by the submarines, even survivors clinging to overturned boats and rafts were ruthlessly killed. The number of lives lost on the Leinster alone was 480.

Notwithstanding continued storms on the western front are making thin mud in Flanders the Belgians under direct command of King Albert, and the English are driving ahead and threatening Ostend and Bruges and other near coast points held by the Germans. South of Lille terrific bombardment and continual advance is reported and the wedge is driven deeper into the German lines every day. At the present rate of advance Eastern France will practically be cleared of enemy troops within a few days. On Tuesday alone British and French troops captured 10,000 prisoners and more than 100 large guns. At the extreme southern end of the line, especially near Metz, the Americans have been busy strengthening positions but have made no general advance. North of Rheims, however, the Americans have been aiding the French in forcing wedge into German lines.

"The German government has accepted the terms laid down by President Wilson," was the declaration of Solf, German state secretary of the foreign office. However, "the German government suggests" that a mixed commission be appointed for making necessary arrangements for evacuation. President Wilson did not think it advisable to negotiate regarding any commission and replied to the German note in a very short time, leaving evacuation, armistice, etc., entirely to the judgment of military advisers and further stating that neither the United States nor any of its allies will consider an armistice "so long as the armed forces of Germany continue the illegal and inhuman practice which they still persist in." The President not only accuses them of being murderers but common thieves in the stripping of cities and villages of all tbey contain, often of their very inhabitants. The President further demanded "the destruction of every arbitrary power that can separately, secretly and of its single choice disturb the peace of the world." The Austrian and Turkish appeals have not yet been answered.

Southern California Fair at Riverside

By R. P. Royce

IF THE management of any district or county fair aspires to the reputation of having the best fair in the state it will be necessary to stage a better show than the Southern California Fair held at Riverside October 8-12.

The fair just closed was a record breaker in several ways. The gate receipts held up with those of last year and the livestock exhibit registered an overflow. Plans had been made to take care of increased entries in the live stock department, but with the closing of the entries it was found necessary to provide additional space.

Aside from the usual string of side shows, there was a distinct educational atmosphere noted throughout the various departments. Exhibits from the different farm centers, a boys' judging contest, a pig feeding contest, the exhibit from the cow testing association and lectures on questions of interest to farmers and their wives, all served to lift this fair out of the "pumpkin" class.

A feature not noted at other fairs was the Patriotic Tent. This tent was given over to the exhibits and activities of twenty-three war organizations.

This year spectators were provided with a comfortable place from which to watch the judging of the live stock classes. The fair management has erected a covered judging arena with several rows of seats. The arena is divided into two rings in order that two kinds of stock may be judged. The rings are a bit small, but are a vast improvement over the usual accommodations.

Agricultural and horticultural exhibits filled a large tent. Displays from the farm centers at Glen Avon, Hemet, Fruitvale, Little Lake, Nuevo, Palo Verde Valley, Perris Valley, Elsinore, Chino and Grand Terrace competed for prizes.

Larger exhibits of tractors and farm implements have been noted at other district fairs, but the Riverside exhibit was quite creditable.

The success of the fair is no doubt due to the efficient secretary, R. L. Taber, and to the capable department superintendents.

THE LIVE STOCK SHOW

The outstanding feature of the fair was the splendid exhibits of live stock. Every department except the sheep showed substantial gains both in numbers and quality. Nearly 250 hogs were in the pens.

Herds of Holsteins, Jerseys, Guernseys and Ayrshires made a well balanced exhibit of dairy cattle. Three exhibitors of Shorthorns competed. The horse department was particularly strong for a district fair. The show of milk goats was said to have been the best ever held on the coast. The fair management is to be congratulated on the live stock show.

Much interest was manifested by visitors and from the questions asked the judges and the exhibitors, the ranchers and fruit men of Southern California are giving serious thought to the part live stock can take in their operations. The time will soon come, if it is not already at hand, when the matter of soil fertility will become a problem, the solution of which will rest to a very large extent on a system of farming wherein live stock is maintained.

F. H. Scribner of Los Angeles judged the horses, cattle and sheep. Walter Gatton of Los Angeles judged all the hogs. L. A. Bridinger of Santa Rosa passed on the goats.

The Shorthorns

The Maxwell-Miller cattle from Colorado were furnished competition in most of the classes by the F. P. Hall herd from Perris, California. The Eastern entries had little trouble in winning their classes, as the Hall cattle were not fitted. This herd showed a number of well bred young things that were handicapped through lack of fat.

Judge Scribner made several changes in the ratings given the Colorado cattle at Fresno. The senior bull calf, Beauty's Dale, was made champion over the two-year-old Princely Stamp and looked quite well with the purple. The placing of the Maxwell-Miller senior yearling heifers was another surprise. The judge preferred the thicker roan, Clear Spring Susan, to the stronger top and sweeter head of the white, O. J.'s White Gloster. The winning heifer was later made champion over the good two-year-old and also the very attractive senior calf, Flora of Anoka. This calf was champion female at Fresno and was picked to repeat at Riverside.

Exhibitors were: Maxwell-Miller Cattle Co., Steamboat Springs, Colorado; F. P. Hall, Perris; Frank E. Collier, Wildomar.

Awards: Bull, two years old and under three—Princely Stamp, Maxwell-Miller. Bull, junior yearling—1 and 2, Susan's Earl and Gainford Butterfly, Maxwell-Miller; 3, Avon, Hall. Senior bull calf—1, Beauty's Dale, Maxwell-Miller. Junior bull calf— 1, Maxwell-Miller; 2 and 3, Hall. Champion bull—Beauty's Dale, Maxwell-Miller. Aged cow— 1, Eliza Broadhooks 2nd, Maxwell-Miller; 2 and 3, Proud Blossom and Adelaide's Pride, Hall. Cow, two years old and under three—Cloverleaf Lovely 2nd, Maxwell-Miller. Senior yearling heifer— 1 and 2, Clearspring Susan and O. J.'s White Gloster, Maxwell-Miller. Junior yearling heifer— 1 and 2, Hillshade Beauty and Mina Marigold, Maxwell-Miller; 3, Ara-Bella's Gem, Hall. Senior heifer calf—1, Flora Anoka, Maxwell-Miller. Junior heifer calf— 1, Collier; 2, Hall. Champion cow or heifer— Clearspring Susan, Maxwell-Miller. Aged herd— 1, Maxwell-Miller. Young herd— 1, Maxwell-Miller; 2, Hall. Get of sire— 1, get of Royal Archer Sultan, Hall. Produce of dam— 1, produce of Overbrook Susan 2nd, Maxwell-Miller.

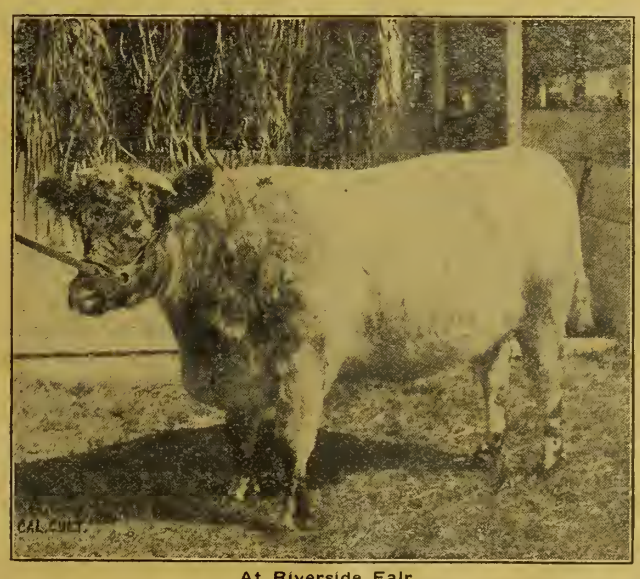
The Holsteins

The Holstein classes were comfortably filled with entries from five local herds. The McAlister & Son entries were the heaviest winners. The senior calf, King Alcartra Prilly Nadine, was champion bull, and the aged cow Miss Korndyke Mercedes was champion female. Stalder Bros. furnished rather strong competition in most of the younger classes. The entries from the George Junior Republic attracted considerable attention. This institution is laying the foundation for one of the good herds of the South.

Grand Champion Stallion
Exhibited at Riverside Fair by F. L. Hall, Perris.

Exhibitors: McAlister & Son, Chino; Stalder Bros., Riverside; E. K. Stalder, Nuevo; George Junior Republic, Chino; Grandview Dairy, Corona.

Aged bull— 1, King Winnie, McAlister & Son; 2, King Clyde Korndyke, Grandview Dairy. Bull, two years old and under three— 1, Director Spofford Klondike Lad 5th, George Junior Republic. Bull, senior yearling— 1, Prince Lill Walker, E. R. Stalder. Bull, junior yearling— 1, Rosamaine's Pontiac Netherland, Stalder Bros. Senior bull calf— 1 and 2, King Alcartra Prilly Nadine and Korndyke Segis Neva, McAlister & Son; 3, Rosamaine's Spofford, Stalder Bros. Junior bull calf— 1, 2 and 3, King Sadie Vale Oakland, St. Rachel Segis, St. Vera Segis, McAlister & Son. Grand champion bull— King Alcartra Prilly Nadine, McAlister & Son. Aged cows— 1 and 2, Miss Korndyke Mercedes, Allenvail Clothilde Walker, McAlister & Son. Cows, two years old and under three— 1 and 2, Miss Pontiac Model De Kol and Lady Woodcroft Pietje, McAlister & Son. Senior yearling heifer— 1, Blanche Segis Walker, Stalder Bros.; 2, Snowflake Juliana of Rock, George Junior Republic; 3, Hartog Creamelle De Kol 2nd, McAlister & Son. Junior yearling heifer — 1, Abbekerk Pontiac, Stalder Bros.; 2 and 3, Lady Newtonia Sadie Vale and Korndyke Sadie Vale Crane, McAllster & Son. Senior heifer calf— 1, Duchess Korndyke Sadie Vale, McAlister & Son; 2, Ida DeKol Lyons, George Junior Republic; 3, Rosamaine's Pontiac Gold Drop, Stalder Bros. Junior heifer calves— 1 and 3, St. Changeling Wildwood and St. Canary Segis, McAlister & Son; 2, Rosamaine's Segis Ormsby, Stalder Bros. Grand champion cow— Miss Korndyke Mercedes, McAlister & Son. Aged herd— 1, McAlister & Son. Young herd— 1, Stalder Bros.; 2, McAlister & Son. Calf herd— 1, McAlister & Son; 2, Stalder Bros. Get of sire— 1, McAlister & Son; 2, Stalder Bros. Produce of dam— 1, McAlister & Son; 2, Stalder Bros.



At Riverside Fair
Clear Spring Susan, champion Shorthorn cow exhibited by Maxwell-Miller Cattle Company, Colorado.

Jerseys

The herds of Wherrell, Thorp and Miller had previously met at Sacramento under the same judge, so naturally most of the state fair ratings were not changed. The herd of Geo. W. Thomas sprang several surprises in the young classes and made an excellent showing.

Miller's aged bull, Altama Interest, was again placed ahead of Thorp's Imp of L. Thomas showed a good two-year-old bull into second place.

Five senior bull calves made one of the strongest classes of the show. The Wherrell state fair junior champion, Golden Legacy's Champion, met a real competitor in Knight of Golden Glen, shown by Thomas. The judge took considerable time to make up his mind and in the end liked the front and style of the Wherrell calf. The third calf was recently brought out from the East.

The class for aged cows brought out five real tops. The first two held the same rating given them at all the fall shows. Valet's Golden Biddy was placed below Beauty of Walnut Park, a cow of more constitution but showing quite lame from a spavin.

The junior heifer calves were headed by Mary of Fuimus Farms, who was junior and reserve grand champion at Sacramento.

Miller's Altama Interest was champion bull and Thorp's aged cow was champion female.

Exhibitors were: J. E. Wherrell, Riverside; J. B. and J. E. Thorp, Lockeford; Guy H. Miller, Modesto; Geo. W. Thomas, Arlington; C. Sturzenegger, Claremont.

Awards: Aged bulls— 1, Altama Interest, Miller; 2, Imp of L., Thorp; 3, Merry Maiden's Conquest, Sturzenegger. Bull, two years old and under three— 1, Jolly Senator Raleigh, Thorp; 2, Walnut Park Noble, Thomas. Bull, one year old and under two— 1, Jap's Perfection Owl, Miller; 2, Lilly's King of L., Thorp. Senior bull calf— 1, Golden Legacy's Champion, Wherrell; 2, Knight of Golden Glen, Thomas; 3, Priscilla's Oxford Prince, Wherrell. Junior bull calf— 1, Miller; 2, Thorp; 3, Thomas. Champion bull— Altama Interest, Miller. Aged cows— 1, Salome of Mossdale, Thorp; 2,Goldie of Venadera, Miller; 3, Beauty of Walnut Park , Wherrell. Cow, two years old and under three— 1, Angela of Venadera, Miller; 2, Nomie of Mossdale, Thorp. Cow, one year old and under two—1, Lucille of Venadera, Miller; 2 and 3, Bess of Mossdale and Lass of Mossdale, Thorp. Senior heifer calf— 1, Kate of Fuimus Farm, Wherrell; 2, Raleigh's Lady Grace, Thomas; 3, Fair Salome of Mossdale, Thorp. Junior heifer calf— 1, Mary of Fuimus Farm, Wherrell; 2, Thomas; 3, Thorp. Champion cow— Salome of Mossdale, Thorp. Aged herd— 1, Miller; 2, Thorp. Young herd— 1, Miller; 2, Thorp. Calf herd— 1, Wherrell; 2, Thomas; 3, Thorp. Get of sire— 1, get of You'll Do Oxford Lad, Wherrell; 2, Miller. Produce of dam — 1, Thorp; 2, Thomas.

Guernseys

The show of Guernseys was not as well balanced as it should have been. The Hollow Hill Farm entered a full herd, and lost only the bull championship, the aged bull class and the senior bull calf.

Exhibitors were: Hollow-Hill Farm, Colton; Grandview Dairy, Riverside.

Continued on Page 398

Agricultural News Notes of the Pacific Coast

Northern California

Olive pickling has begun in the factories at Oroville.

Mendocino's wheat yield is 100 per cent above last year's.

Yolo County is asking for the appointment of a home economics director.

The Antelope district of Placer County has shipped six carloads of almonds.

A campaign for greater production of honey is to be carried on by the farm bureau of Butte County.

International Livestock Show at San Francisco, November 2-10. Thirty thousand dollars in premiums for pure bred stock.

Napa County reports that 25 per cent of her prunes have been rotting owing to the damp weather that followed the rains.

Another unit of the state colony at Durham is about to be opened for settlement according to announcement made by Dr. Mead.

Steps are being taken to more thoroughly organize the live stock interests of members of the El Dorado County farm bureau.

There are 6,430 acres planted to prunes in Butte County. Almond orchards show the next largest acreage, 5,765; olives come third with 5,080 acres.

The Sacramento Union is authority for the statement that warehouse facilities are available for only 25 per cent of the rice crop of the Sacramento Valley.

There was a very large exhibit of pigeons at the Pacific Coast Land and Industrial show held in Oakland last week. Nine hundred and eleven birds were shown.

Local farm bureau meetings will be held in Placer County at Long Valley, October 19; Gold Hill, 21; Colfax, 23; Mount Vernon, 26; Roseville, 28. All meetings at 8 p. m.

Albert Lindley, chief of the department of emergency crop production of the state council of defense, says that this year will see an increase of 100,000 acres in wheat plantings in this state.

Sheep and goat breeders of El Dorado County have formed an organization. The farm bureau of that county is working toward the forming of a pool of all wool and mohair stocks for sale to the government.

Dr. Elwood Mead says that the state land colony at Durham is proving a complete success and urges the necessity of the national government providing some similar means of placing returned soldiers on the soil.

A. L. Wisker, pear grower of Nevada County, is studying problems of pear blight eradication at the Oregon experiment station. The ravages of pear blight in Nevada County orchards were severe last summer.

Secretary Beard of the Sacramento Valley Development Association states that he is assured the federal government will appropriate $400,000 toward the construction of the Feather River highway—after the war, of course.

Sonoma County's fair announced for October 11 and 12 was indefinitely postponed. The damage caused by the heavy rains to grapes, prunes and other fruit crops throughout the county is given as the main reason for the postponement.

Central California

Much alfalfa hay was damaged by rains in Mono County.

Seven farmers of the Pajaro Valley are now constructing silos.

Fig growers of Dinuba expect to secure record prices for this season's crop.

The Tejon Ranch of Kern County is planning to put in 30,000 acres of wheat.

Bakersfield dairymen put up milk prices two cents per quart on October 1.

Many raisin growers have saved much of their rain damaged crop by sulphuring.

San Benito County stockmen are happy over green pasturage already showing up.

Sheep are rapidly being taken from summer ranges of Mono County to valley pasture.

Hogs sold at the recent farm bureau auction at Wasco, Kern County, brought $14,139.

Forty thousand cases of Porterville canned tomatoes have been taken for army requirements.

Apples are now going into storage from the Newtown Pippin crop of the Watsonville district.

Stockmen of San Benito County have guaranteed to raise one half the county's Liberty Loan quota.

The Oakdale irrigation district has filed upon 150,000 acre feet of water in the Stanislaus River watershed.

Porterville is now packing pomegranates. The output is estimated at 30 cars, with a net value to the growers of $30,000.

Horticultural Commissioner Rutherford of Stanislaus County is planning a squirrel poisoning campaign for November 1 and 2.

The early October rains caused severe damage to raisin growers of Madera. Much of the crop was saved by hastily erected dryers.

The Tulare Livestock Association is discussing plans for the auction sales pavilion at Tulare. The association plans to have the building ready in time for the November 21 sale.

Grain farmers of Madera County met at the county seat September 28 to form an association. The purpose of the organization is to "encourage better results in grading, packing and marketing."

There will be local farm bureau meetings in Santa Cruz County at Bonny Doon, October 11; Aptos, 18; Soquel, 23; Happy Valley, 25; Santa Cruz, 28. These are all night meetings, beginning at 8:00.

To meet the emergency created by the rains the Valley Fruit Growers Association has established a labor clearing house in Fresno, and all who can possibly help are urged to go out in the raisin vineyards to help in turning. Many stores were closed in Selma, Kingsburg and other raisin centers that storekeepers might assist in the work.

Directors of the newly formed California Farm Bureau Marketing Association, San Joaquin Valley division, including Fresno, Tulare, Kings, Kern and Madera Counties, meeting in Visalia, have named D. H. Bitner, at present manager for the Kern County farm bureau marketing association, general manager and superintendent, to assume his duties at once with Visalia as the central place of business.

Southern California

Yucaipa will hold its apple show November 6-9.

Walnut crop of the Hemet Valley is estimated at 120 tons.

Southern California's walnut crop is estimated at $6,000,000.

Rain damage in the north has sent up the prices on local onions.

Ventura County's bean fields show a largely increased yield over last year.

Orange County's fair, just closed at Huntington Beach, was very successful.

The Hemet Orange Growers Association has declared a dividend of six per cent on stock.

The drop of milo from $72 to $60 per ton is causing much concern to Imperial Valley ranchers.

Farm courses were given for the last Friday and Saturday in September at Orange, Orange County.

Immense flocks of ducks have come into all the southern part of the state. The season opened on the 16th.

There was a big poultry and rabbit exhibit at the Southern California Fair held at Riverside last week.

The Newport Mesa in Orange County is reported to be developing into an excellent apple raising section.

The October meeting of the Glendora farm center was made a trip to the Riverside citrus experiment station.

A short course in beekeeping will be conducted by the state university at San Diego, November 25-30; Riverside, December 16-21.

Egyptian cotton growers of Imperial Valley have formed an organization to provide for the ginning and marketing of the Pima cotton crop.

The farm labor employment association of Imperial County is urging all farmers who will have need of help to file at once orders for Texas laborers.

Honey shippers are finding firm market among confectioners and bakers who are unable to secure enough sugar to meet the demands of their trade.

The Hueneme canning factory is appealing to the food administration for help in finding workers to handle the large amount of tomatoes on hand and ready for canning.

Local farm bureau meetings will be held in Imperial Valley at Meloland, October 10; Calipatria, 12; South Fern, 14; East Side, 16; La Verne, 17; Magnolia, 19.

An agricultural short course of two days was given at Brawley, October 1 and 2 when subjects dealing with practical war economics as applied to agriculture were discussed by experts.

Twelve units of 100 women each have been sent into Imperial Valley to assist cotton growers in handling their crops. The women were sent under the supervision of the Half Century Association of Los Angeles. The organizing of men's units is under way.

Local farm bureau meetings to be held in Los Angeles at Covina, Oct. 19; Lamanda Park, 21; Monrovia, Little Rock, 22; Lancaster, 23; Newhall, Owensmouth, 24; Inglewood, Pomona, 25; Burbank, 28; San Fernando, November 1; Glendora, Downey, Clearwater, November 4.

The Coast and General

Texas is short on turkeys, poultry and eggs this year.

Recent rains in Florida have much benefited truck crops.

The experiment station at Tempe, Arizona, is marketing some fine dates.

The market on potatoes at Stockton has been improving in the last few days.

Considerable worm damage is reported to apples of Wenatchee and Yakima districts of Washington.

The total bean crop for the United States this year is estimated at 5,000,000 bushels in excess of the 1917 crop.

Idaho's registered bull law went into effect September 7. None but registered bulls are now allowed on public range.

The authorities have ruled that farm labor in order to secure exemption must show that it is in the skilled class.

The Yakima Fruit Growers Union of Washington has just added 70 names to its membership, making a total of 320.

Sixty-three cents is now being paid for butter fat at Bellingham, Washington. This marks the fourth advanced price in three weeks.

During August 138 special fruit trains, with 5640 cars, were operated through from California to the Missouri River and Chicago.

By federal order Florida grapefruit put on the market must show one per cent of acid to seven total solids. Color is not considered a part of the test for interstate shipment.

Italy has requisitioned agricultural machines of all kinds and materials necessary for their working. This is effective for the period of the war and for the entire agrarian year following peace.

The government has been forced to take over a large proportion of the storage supply of butter and this fact has been taken advantage of by unprinicpled speculators in many sections to force exorbitant prices.

Under the budget of the Hood River Apple Growers Association, just adopted by the directors, a maximum charge of six cents per box for apples and 10 cents for pears may be made for handling the fruit the coming year.

The city council of Reykjavik, Iceland, has now begun the baking of bread in a special bakery in connection with the local gas works, where modern machinery has been installed in a special building to utilize the waste heat.

The Apple Growers Association at Hood River has completed the pack of Bartlett pears, all of which have been shipped to Eastern markets. The yield was only 24 cars, 50 per cent of the estimates of growers. Other varieties are being packed and shipped and the association will soon begin on the apple crop.

Does this mean what it seems to mean? The following extract from the Washington Farmer sounds like the millennium: "Grays Harbor County is in the enviable position of having enough funds in its coffers so there will be no levy this year for current expenses. This is the first time in the history of the county that there has been sufficient cash on hand to omit the tax levy."

Gum and Scaly Bark on Citrus Trees

TIME was when we were all guessing as to the cause of citrus diseases, in fact, we presume the time never will come when we are not guessing as to some of them.

In regard to gum disease and scaly bark there has been much better understanding since Prof. Howard S. Fawcett gave a fund of information in Bulletin 362 of the experiment station of the California college of agriculture. This bulletin is to be had for the asking by writing to the college at Berkeley. This bulletin, "Citrus Diseases of Florida and Cuba Compared with Those of California," gives one an excellent idea of these troubles. We, therefore, give summary of two of the diseases which still prove somewhat confusing to a few. The summary was prepared by Prof. R. S. Vaile, formerly of the citrus experiment station at Riverside, now engaged in relief work in Armenia.

Gummosis of Lemon Trees

The disease known as gummosis or lemon gum disease is characterized by the dying of areas of bark, accompanied by exudation of thickened sap or gum usually somewhere on the trunk from just below the surface of the soil to the forks of the branches. Study of lemon gumming as it occurs in groves shows at least two forms; one in which the dead bark remains firm and is killed to the wood as fast as the area enlarges; the other in which the bark is at first soft, later hardening with sometimes a development of gray fungus on the surface during damp weather. Inoculations have shown the former to be caused by the brown rot fungus, Phythiacistis citrophthera Sm. Sm. and the latter by the gray fungus, Botrytis cinerea. Both of these are common causes of decay in packing houses. Of the two forms of gummosis, the brown rot is by far the more common and it also affects orange trees, though less commonly than lemons.

The brown rot fungus lives in the soil, especially in heavy soils. Its development is favored by excessive moisture. Infection of lemon bark is favored by the bud union being kept buried or damp. Sweet stock is far more susceptible than sour.

The methods of prevention that have been worked out by the most observing growers are based on the producing of conditions unfavorable to the development of these organisms. The following practices have been shown to be of great importance in this connection.

1. All soil should be kept from above the bud union. In fact, the earth may well be permanently removed down to and exposing the crown roots.

2. The ground under the drip of the tree should be kept constantly mellow and not allowed to pack.

3. The soil around the tree trunk should never be excessively wet. Standing water under the trees is particularly to be avoided.

4. In all new plantings, sour orange stock should be used rather than other stocks, especially on heavy soils.

5. High budded trees should be planted and they should be planted at least as high as they were in the nursery.

The treatment for cases where infection has already taken place may be briefly outlined as follows:

Remove the bark that is already dead to a point where the dark brown discoloration ceases. An area may be yellowed beyond the actual infection through the presence of stagnant sap, but such area does not carry the contagion and therefore need not be removed. However, more failures are due to not cutting far enough or deep enough, than to over severe treatment. In case of the gray fungus form it is sometimes only necessary to remove the outer layer of bark, leaving the cambium intact.

Special curved tools may be made that are particularly adapted to gummosis work. Such tools are not on the market at present so far as we know.

After removal of the diseased tissue the cut or scraped surface should be painted with a good disinfectant which will remain as a covering for some time. Bordeaux paste seems best adapted for this purpose. It is a strong fungicide, is not harmful to the tree and when confined to the trunks only, does not seem to produce complications with fumigation as is the case when the entire tree is sprayed.

Gumming may continue for some time after treatment. In fact, Bordeaux seems at times to stimulate this. Such gumming need cause no alarm unless bark continues to die back along the edges. The gum itself is free from infectious material. If dying continues, treatment should immediately be extended.

In severe cases where considerable areas of bark have been removed, the tree should be pruned back heavily to permit more natural and rapid recovery. In such cases it is advisable also to cover the large scars with asphalt dissolved in benzine or with shellac after gumming has ceased.

Formula for Bordeaux Paste

Dissolve one pound bluestone (copper sulphate) in three quarts of water in a wooden or earthen vessel. This can best be done by hanging it in a sack at the surface of the water.

Slack two pounds unslaked lime in about three quarts of water.

Stir together when cool, making a light blue mixture the consistency of whitewash. If the mixture turns to some other color before being applied, it is an indication that something is wrong. Mix up fresh each day or two, as the mixed paste tends to deteriorate. It may be applied with a large brush like whitewash.

This may be used on healthy bark as an additional preventive.

Scaly Bark of Oranges

Scaly bark is in the main limited in its effects to orange trees. The cause of the trouble has not been definitely determined, therefore it is impossible to give absolute control methods. The experience of growers and the results obtained in the experiments of Prof. H. S. Fawcett are, however, conclusive enough to be at least suggestive.

Any improvement of conditions increasing the vigor of the tree will aid materially in its recovery as well as in its ability to resist the disease. Very often the pruning out of one or more limbs will almost completely free a tree from the disease. In such case any badly affected branch, even if it be a main leader, may well be sacrificed.

In what may, for convenience, be called the first stages of scaly bark the outer bark is broken into scales and is pushed up and off over areas varying in diameter from an inch to a foot or more. New tissue forms underneath but this often contains small dry gum pockets in some way connected with the disease.

These small scaling areas enlarge slowly, often existing several years before an area of importance is found. Finally a considerable portion of the circumference of a limb or trunk becomes affected. Only then does the appearance of the foliage become an index to the trouble and in many cases recovery is already very doubtful. This may be called the second stage of the disease. Every orange orchard should be constantly watched so that no cases might reach such a point.

If the disease has gone to the third stage, or so far that the wood underneath is beginning to die, there is probably no practical remedy except to remove the limb affected. In case the main trunk has reached this state it is probably best to remove the diseased tree and reset a healthy one in its place. There is no evidence that the reset will be especially liable to the disease.

The same type of treatment that has proven so efficient against lemon gummosis is apparently quite largely so against the earlier stages of scaly bark. Cut out or scrape off the diseased portions of the bark. Care must be taken to remove all of the diseased tissue. In many instances this will necessitate digging out small pockets through the bark and into the wood tissue. In other cases a light surface scraping will answer. A sharp, strong instrument made for the purpose will be found an advantage.

After removal of the diseased tissue, the cut or scraped surface should be painted with a good disinfectant which will remain as a covering for some time. Bordeaux paste seems best adapted for this purpose. It is a strong fungicide, is not harmful to the tree and when confined to the trunks only, does not seem to produce complications with fumigation as is the case when the entire tree is sprayed.

Gumming may continue for some time after treatment. In fact, Bordeaux seems at times to stimulate this. Such gumming need cause no alarm unless bark continues to die back along the edges. The gum itself is free from infectious material. If dying continues, treatment should immediately be extended.

In severe cases where considerable areas of bark have been removed, the trees should be pruned back heavily to permit more natural and rapid recovery. In such cases it is advisable also to cover the large scars with asphalt dissolved in benzine or with shellac, after gumming has ceased.

California's Forests

By Charles H. Shinn

A NEW book about our national forests gives food for rejoicing thoughts in these days of trial and of spiritual growth. It is by Mr. Swain, who is in the forest service of Queensland, Australia, and who has spent a year or more in close study of American forestry. To sum it up he says that we know how; that the fellowship, the loyalty and the knowledge of our foresters are wonderful. Everywhere he found "mutual trust and cooperation and esteem." Lastly he recommends a reorganization of the Australian forest service on principles based upon the American methods.

In these war times there is hardly anything more thrilling than the way in which forest publications show the atmosphere of courage. From Canada, South Africa, India and all the English-speaking countries, especially from old Scotland, comes with tremendous force the united systematic resolve to get more out of forest resources, to have forests which are much better and much nearer to the everyday life of the people. Foresters with fewer men and fewer dollars are somehow doing more work for the world and are rising nobly to the situation. England, Scotland, France, Canada, America and the rest of the world have been taught by war the necessity of forests to civilization—of home forests, of having timber, fuel, wood pulp and all that the forests yield within reach.

If this new recognition of forest value continues to develop after the war, the game producing and esthetic sides of forests will be subordinated to practical considerations. That is what the Scottish "Journal of Agriculture" is saying this minute.

The lesson of these things for us of California is that "after the war" men and women will come to us from all places of similar climate and conditions to study our forests—men and women because the world which is already in progress of creation will have no end of educated women as leaders. Forestry, like landscape gardening, like scientific agriculture, like everything else one can mention, needs women just as much as men—and has a good many now.

One of the most immediate problems before the forests of California (and many other places) has to do with the now-wasted fuel supplies, the cost of obtaining which is held by experts to be prohibitory. Since some general discussions of this problem have appeared in the newspapers, a little more seems wise.

These are the facts at present as regards most of the Sierras: Local fuel users have been for years approaching more difficult country, and much of the lower foothill areas are now cut over; to get out the maximum fuel supplies from further back and higher up involves in many cases, new road construction, gulching, hauling to central depots and then re-hauling to the valleys. This appears to make the present cost, under the shortage of men and transportation, too great for immediate consideration. Nevertheless, much more fuel can be had even now from the near mountains wherever old roads render "gulching" and two handlings of the load unnecessary.

The possible long continued coal shortage with even higher cost to consumers for coal makes the fullest possible use of fuel supplies in our mountains an economic necessity. Lumbermen, forest engineers and practical men who know mountain conditions are therefore certain to tackle this whole problem until it is solved.

But the fulcrum on which the lever must turn is just this—we must make all of our California forests more accessible. Fuel is only one item, and not the most important one. Timber supplies come first; material for paper making is a big item. When the war is over and our boys come back, a great many of them will find places and the happiest sort of work in the mountains of California. Returned soldiers of the right turn of mind, the right qualifications, will be mighty useful in this work.

Give Summer Cover Crop a Chance, or Still More Regarding June Drop

Written for California Cultivator By Robert W. Hodgson

THE June drop problem continually bobs up. The writer had intended saying no more on this subject this season but he cannot forego a few comments on some of the more recent June drop discussions heard in various parts of the state. There is little doubt but that Central California citrus growers are convinced that the June drop constitutes practically the limiting factor to successful Washington Navel orange production. This is evidenced by the tremendous interest shown in discussions of the June drop problem.

In the first place, the writer wishes to correct a few ideas which are prevalent. The conclusions as set forth by Dr. J. Eliot Coit and the writer in bulletin 290 on "The June Drop of the Washington Navel Orange," represent a candid and careful interpretation of data collected in an investigation of this problem extending over a period of two years. While they may not be entirely correct, still they do not constitute a hastily formed "theory" such as the main portion of a number of articles recently appearing on the subject.

June drop is usually due to adverse weather conditions. This is exactly what the Central California citrus grower has felt all the time but the explanation given is so simple he hesitates to believe it when the investigator confirms his ideas. Evidently he is looking for some very complicated, abstruse, technical explanation involving the use of some spray or chemical agent as a remedy before he will be satisfied. The simple fact is that when more water evaporates from Washington Navel orange leaves than they can get from the conducting system of the tree, they turn to the young fruits which constitute a new source of supply. The fruit loses water but is again filled up at night. When the magnitude of this fluctuation in water content reaches a certain point, a chemical process called hydrolysis is started in a certain zone of cells known as the abscission layer, and within a few days the fruit falls off. The same thing precisely holds for certain other plants. This condition has actually been proven in carefully conducted experiments which were published as a paper in the Agricultural Science Series of the University of California last year.

Occasionally there comes a year when a common everpresent fungus finds conditions favorable for its growth in the navel end of the young fruits. It does so, and causes many to fall, those remaining becoming the heart rot oranges found in the packing house. It is so simple it is unbelievable.

The writer has been interested in a recent article on this subject bringing forth a number of objections. He proposes to discuss them somewhat. It should be emphasized that nobody knows better than the writer that the solution of the June drop problem will not be easy. The nature of the cause makes a simple cure or remedy almost impossible. Nevertheless it is felt that promising results have been obtained along several different lines and work along these lines should be continued. Simply admitting the serious nature of the problem will never accomplish anything. The history of progress always has been action.

First, as to the effect of the summer cover crop. Much has been made of the point that we can hope to raise the average humidity in a citrus orchard but little through the use of a summer cover crop. As Jensen has shown, the normal difference in average humidity from year to year may be greater than any possible effect we may hope to get by using a cover crop. This is all very true. But it is not the average humidity which is the important thing. It is not so important that the average humidity has been raised as it is that when extremely hot or dry spells occur the cover crop acts as a buffer and modi-

Wonderful Summer Growth

Buckwheat and vetch. This tremendous growth was successfully turned under with a tractor and double disk. In addition, the horse plow with heavy chain attached will force under the heaviest growth.

fies them sufficiently to enable the young fruits to hold their own. This is the reason why a straw mulch gives much the same results. It, of course, does not raise the average humidity at all but it does help during a heat wave.

Water Very Important

It is of course to be understood by every citrus grower that a summer cover crop uses water, and in considerable amounts. When a grower has to buy all the extra water he can corner just to keep his trees going, everyone realizes that he would be foolish to grow a summer cover crop. And yet it is just such growers who are prone to criticize the summer cover crop, which reminds the writer of the fable of the dog in the manger. Give the summer cover crop a fair chance at least.

Where a man cannot get sufficient water for both cover crop and trees it would be the writer's suggestion that he look into the matter of mulching, and if that cannot be done he should resort to the judicious use of fertilizers to keep his trees in as vigorous and thrifty condition as possible. And this does not mean the addition of potash or sulphur but the liberal use of barnyard manure, dried blood, tankage, or sulphate of ammonia. It has recently become popular to blame everything on the Kaiser but to blame him for the June drop since he won't let us have any more potash seems like just a little bit too much. Who would have ever guessed the depths to his perfidious machinations!

Turning Under Summer Cover Crop

An objection voiced has been that a summer cover crop is hard to turn under and get well incorporated into the soil, the inference being that the summer cover crop must be allowed to mature. This is exactly what should not be done. After the summer cover crop has done its work it should be turned under while still lush and green. This means that it should ordinarily be turned under early in July. The writer has personally had under observation a number of orchards having summer cover crops this season and he has seen no particular difficulty in getting the crop under. It seems to be a question of suitable tools and sufficient power. One man turned under a cover crop of buckwheat and vetch running close to 20 tons green matter per acre quite satisfactorily with a tractor and double disc.

Another criticism is that cutting the feeding roots by the turning under of the crop must cause injury to the trees. No doubt it does somewhat but to nothing like the extent which the turning under of the winter cover crop does. At the period when the winter cover crop is turned under the trees are either about to bloom or in bloom and setting fruit. During the critical period very little shock is sufficient to cause some of the fruits to fall. But after that period is passed, when the summer cover crop should be turned under, under no conditions will the fruits drop. It requires a number of pounds pull to separate them from the trees. All growers realize that allowing the trees to suffer for water later in the season is much less dangerous than at the period of setting fruit.

Many growers prefer to plow a cover crop under. The writer prefers to disc it under, going over the orchard a number of times to get the material well incorporated into the soil. This is particularly desirable for the summer cover crop, plowing being more desirable for the winter crop to get it down deep where the feeding roots are located.

The objection has been raised that a summer cover crop prevents cultivation. We all know that in our hot dry climate the farmer is in quite a dilemma with respect to this practice. If he does not cultivate he loses his water; if he does he loses his humus. If a man has enough water for the cover crop it is not difficult to see that by the use of such a crop he gains in two ways, both by adding humus and by preventing the loss of that already present.

Essentials in Handling Summer Cover Crop for June Drop

1. You must have sufficient water to grow it, which means water in addition to that required by the trees.
2. It must be planted early in order to cover the ground within several weeks after the blooming period. An ordinary bean crop will not do this satisfactorily as it is planted too late.
3. It must thoroughly cover the ground during as much of the critical period as possible.
4. When its work is done it should be incorporated into the soil while still green and succulent.

Do not condemn the summer cover crop nutil you have given it a fair trial.

THATS' WHAT!

"Who's Who" is of little importance in the Red Cross compared with "What's Done."

WOOD BURNING FUEL SHORTAGE

The coal shortage for next winter, estimated by the fuel administration at about 14,000,000 tons, makes it necessary that wood should be used to save both coal and transportation. Country districts and small villages are in position to greatly help coal conservation by burning wood.

On the average a cord of wood is about equal to seven-tenths of a ton of coal. Most of the oaks and hickories as well as western yew, honey locust, blue gum, sweet birch, and a number of others are the equivalent of nine-tenths of a ton of coal.

Unless you can broaden your shoulders when needs be, you are no burden bearer.

"I Bought That Truck with Dynamite"

"I need it too, I can tell you. I'm getting more fruit this year than my horses could ever move to market.

"Why do I say I bought it with dynamite? Because if it hadn't been for Hercules Dynamite I never would have had the money to buy it. I wouldn't have needed it anyway because I wouldn't have had the fruit to haul I have now.

HERCULES DYNAMITE

is responsible for my bumper crops. To begin with I plant the trees in blasted holes instead of spade-dug holes. As a result my trees bear a year earlier than they ordinarily would. They give finer fruit and more of it year after year. The death rate is unusually low too. You never saw such healthy orchards.

"Then I help keep them healthy with Hercules Dynamite by cultivating the soil down around the ends of the roots so they grow better. I tell you it pays at all points. That motor truck proves it."

You ought to use dynamite yourself. There is a book, "Progressive Cultivation," that tells all about it. The reading of it will mean money in your pocket. It is sent free on request. Mail the coupon below, *today*.

K-W High Tension Magnetos are Protected Against Powder-Fine Dust-Oil and Water

IN many localities tractor manufacturers find it necessary to equip their tractors with "periscope" air intakes which reach up above the cloud of fine dust. But the Magneto must be mounted on the engine and give satisfactory service under these same conditions. This is one feature that has made the K-W Magnetos the standard on tractor work.

These tractor manufacturers don't worry about dust getting into a K-W Magneto. They know its working parts are protected against even the finest Alkaline dust, and oil and water can't reach its internal parts and give trouble.

The protection of all working parts is only *one* feature of K-W Magnetos. K-W users get quick and easy starting without troublesome batteries or coils; more power out of the same fuel, and continuous, reliable, no-trouble ignition.

If you are not using K-W Ignition now, write us and let us show you how a K-W Magneto will cut your fuel bills and free you from ignition troubles, regardless of the weather or working conditions.

Insist that your new tractor be K-W equipped. Forty tractor manufacturers pay more for K-W Magnetos because of K-W superiority. Write for list of K-W equipped tractors.

Sulphur and Crop Yield

Written for California Cultivator By F. H. Mason

THOUGH the earliest agricultural researches were directed mainly toward the improvement of soils, these soon gave way to the more fascinating work of improvement of plants by selection and cross pollenization, and their protection from enemy pests by sprays, powders, and gases, and the introduction of enemy parasites. How high a degree of perfection many plants have reached under such treatment is perhaps most noticeable in some of our garden plants, many of which have been so improved that at first glance it is difficult to see a resemblance to the parent plant. Equally successful, if less noticeable, work has been done to vegetable, field and orchard plants, with the view to improving the quality and increasing the quality of the crops.

Now the tendency seems to be to get back once again to the root of things and give more attention to the improvement of the soil. Probably the greatest work in this direction is open to the bacteriologist. It has long been known that a group of minute organisms in the soil have the power of fixing atmospheric nitrogen, another group of converting insoluble sulphur into soluble sulphates, another of changing vegetable matter into humus, and so on with other substances. Few or no attempts have been made to improve these organisms with a view to obtaining greater effort from them. Brewers and vintners have so improved fermentation yeast that the result now obtained from it is hardly comparable with that obtained from the earlier material, and there seems to be no reason why soil bacteria should not be improved in the same way. Some years ago, the Azotobacter, the principal nitrogen fixing bacterium, ran so rampant and produced such quantities of sodium nitrate in orchards in the alkaline soil of a part of Colorado that they did considerable damage. In fact, a number of 30 year old trees were killed by the excess of nitrate formed, and an elaborte research at the Colorado state experimental station proved it to be due to the work of the Azotobacter. The alkali, moisture, and decaying vegetable matter in the soil were found to be just suited to the propagation of this microorganism. There is reason to believe, then, that, by careful study of this problem, the nation, so far as agricultural pursuits are concerned, could be made independent of the Chili saltpeter beds and of artificial nitrogen fixation.

Much of the improvement to the physical properties of soils has been of a haphazard nature. The farmer has been in the habit of digging in something here because the soil is too soggy, and something else there because it is too light and will not retain moisture, and he does it because his father and grandfather did it before him. That he has met with some measure of success there can be no gainsaying, but how much greater that success would have been had he worked along more scientific lines.

We must look at soil as an aggregation of mineral particles of varying size, shape, and composition, that forms a medium by which food in solution is conveyed to the roots of plants. The laws that govern the diffusion of salts in solution as the latter pass between the interstices of this mineral aggregation are little understood. The conditions are such that a number of well defined laws are pulling against each other, so to speak, and forming new laws, laws that must be studied to get the best results. The size and nature of the mineral particles undoubtedly influence not only the rates of diffusion of the minerals in solution passing through the interstices between them but also the amount of water a soil is capable of retaining. Then, too, in a loosely arranged aggregation of mineral particles there is a greater opportunity for aeration and a less resistance to the spread of plant root system than in a compactly arranged one. Thus, it will be seen there is much opportunity for careful investigation. There is a great need, too, for a nomenclature of the various soil conditions that can be readily understood. Our present terms, such as they are, have too broad an interpretation. It is impossible to define a soil condition by their use, therefore much misunderstanding arises.

It is, however, on the chemical nature of soils that agriculturalists seem to have been bending their energies in recent days. Some truly significant facts have been brought to light that give every prospect of a wonderfully beneficient influence on crop yield. Most important among these is the influence of sulphur on soils.

Until recently sulphur was supposed to be present in only very minute quantities in plant life. Compared to nitrogen, phosphoric acid, and potash the quantity of sulphur was considered negligible. This supposition was due, however, to faulty methods of analyses. The agricultural chemist had been in the habit of determining what he called the "inorganic constituents of plants" by incinerating the plant and from the analysis of the ash calculating the amount of the so-called "inorganic constituents." From the light of recent researches it is now known that sometimes as much as 90 per cent of the sulphur content of the plant was lost during the incineration, so the result obtained gave no idea of the sulphur content. By improved methods of analysis it has been discovered that many plants contain more sulphur than phosphoric acid, nitrogen, or potash. Thus, for instance, at the South Oregon experimental station a ton of dried alfalfa was found to contain seven pounds of sulphur and five pounds of phosphoric acid, while a like amount of rape contained the phenomenal amount of 20 pounds of sulphur. The sulphur seems to exist mainly in combination with carbon, and for this reason until recently escaped the notice of the agricultural chemist. Since it has been established beyond all doubt that next to carbon, oxygen, and hydrogen sulphur is one of the main, if not the main, constituent of plant life, the addition of sulphur in various forms to soils is being investigated at a number of agricultural experimental stations in America and Europe.

The investigations have produced some truly wonderful results. The addition of from three to four hundred pounds of elemental sulphur per acre prior to sowing has caused some remarkable crop increases. Practically every crop experimented with has shown an increase under the influence of sulphur: some small, others phenomenal. The increase too varied considerably at the different stations. This, of course, was to be expected, as

the nature of the soil varied. The following are a few of the results obtained on a field scale near Salt Lake. Sugar beets gave the poorest increase, that of 3.7 per cent, and turnips came next with 10.4 per cent. Barley showed an increase of 52.3 per cent, oats 57.3 per cent, wheat 127.8 per cent, maize 182.6 per cent, alfalfa 36.8 per cent, Canadian field peas 383.3, potatoes 63 per cent, and Hubbard squash 187.9 per cent. In making these tests, a plot of land was selected that has as nearly as it was possible to find the same character of soil throughout. Half of this was sown with four hundred pounds of sulphur per acre, and the whole was then plowed. The various crops were sown in the sulphurized and unsulphurized soil at the same time, each at its proper season, and were treated as nearly as possible alike as regards cultivation and irrigation. The harvesting on the sulphurized and unsulphurized portions was done on the same day, and the crops were weighed, giving results as stated. The soil on which the experiment was conducted was alkaline.

Work done by Dr. C. B. Lipman, of the University of California, and Dr. F. C. Reimer, of the United States South Oregon station, confirms the experiments made at Salt Lake and proves beyond all doubt that the addition of sulphur to soils increases the yield of all crops, and in many instances phenomenally. The most remarkable result recorded is that by Dr. Reimer, who found that by harrowing in 300 pounds of elemental sulphur per acre the yield of alfalfa was increased over 500 per cent. It is a noticeable fact that the addition of sulphur to soils seems to increase the yield of the plants of the pulse family more than any other, and suggests that it may increase their well known nitrogen fixing properties. The best results have been obtained in moist soils well charged with humus. In fact, to get the full benefit from the addition of sulphur, moisture and humus seem essential.

Up to now the experiments with sulphur have been conducted mainly on alkaline soils. To what extent sulphur will improve neutral and acid soils is problematical. It may—probably will—be necessary to add lime as such as basic phosphate or in other form, with the sulphur, but, considering the established fact that sulphur is an essential of plant life, there is little doubt but that its application under suitable conditions will materially increase crop yields on all soils.

Another important point is the property sulphur has been found to possess of releasing and rendering available for plant assimilation potash that is already in the soil, but in a form not, or only slowly, available to plant life. There is a considerable amount of such potash locked up in the soils of a large part of the continent of North America, and if this potash can be released and rendered available to plant life it will go far toward making us independent of the German supply.

EARLY RAINS AND PEAR BLIGHT

By G. H. Hecke, State Commissioner of Horticulture

The unprecedented early rains, if followed by warm weather, will start new growth of all deciduous fruit trees. In the case of pears there is a serious danger with respect to the development of pear blight, which must not be overlooked. Already pears have been seen that have begun to throw out new leaves at the terminals. Not only will new foliage be developed but blooming may also take place. While it is probable that insect visitants of the blossoms will be less in the fall than in the spring there is nevertheless considerable danger of pear blight development and spread as the trees take a new lease on life. Conditions will thus be ideal for the development of the pear blight organism from infections already in the trees.

There is a tendency on the part of some pear growers to neglect the removal of blighted branches late in the season, as ordinarily the disease develops little after the spring months, and hold-over cases may be removed in the winter when the press of work is not so acute as during the summer season. Every pear grower should be on his guard and in the event that blight should become active at this time of abnormal tree development no pains should be spared in an effort to control it. As the most important thing in connection with pear blight control work in the orchard is the disinfection of wounds and tools used in cutting the blight from the trees, the information that has just come to us from the noted pear expert of Oregon, F. C. Reimer, should be given publicity at this time. Reimer experimented with a number of different disinfectants, using corrosive sublimate, creosole, Bordeaux paste, lime sulphur, black leaf 40 and cyanide of mercury. Corrosive sublimate, which is commonly used, was not found to be thoroughly effective, and the only material which could be depended upon absolutely was cyanide of mercury. It was used at the strength of one gram of pure cyanide of mercury to 500 grams of water. We quote the following from an article just received from Reimer: "It is quite remarkable that with all the other treatments every wound developed blight, while where the cyanide of mercury was used not the slightest indication of disease could be found." There has been a feeling in the minds of a number of people who have been studying pear blight that the commonly used corrosive sublimate was not giving results. That there were good grounds for this feeling is indicated by Reimer's experiment.

NURSERYMEN'S ANNUAL MEETING

"The Transactions and Proceedings of the California Association of Nurserymen's Seventh Annual Meeting, San Jose, October, 1917," is the title of the annual report of the association now mailed to members. Secretary Kruckeberg announces that the sending out of these proceedings was delayed until this time in order to create interest in the coming convention which will be held at Riverside at the time of the State Fruit Growers and other conventions, November 11-16. The report contains the president's and many other addresses made at the convention in full, and many other events held at that convention. Nurserymen are anticipating a still greater event at the Riverside meeting.

YUCAIPA'S APPLE SHOW A RED CROSS BENEFIT

Secretary Redding writes the Cultivator: "This year we are holding the Southern California Apple Show as a Red Cross benefit, and judging by the entries to date it will far surpass any apple show ever held in the south."

The apples of Yucaipa Valley have made an enviable name for themselves, as have the owners of Yucaipa Valley orchards. Their Southern California Apple Show is worth going miles to see. The dates are: November 6, 7 8, 9.

Styleplus make both sides of your dollar count

Good resolutions for every man to make in these war times are:

"I will buy only the clothes that I *need*.

"I will pay the price that brings genuine quality—*and not one cent more*."

Every dollar you spend should count. Count for you and country.

You will be stylish and thrifty *both* if you buy Styleplus Clothes.

You get reliable quality and style at a nationally known price—*a sensible, medium price*.

By making only a few standard grades in big volume we reduce costs and produce clothing values justly famous with well dressed and economical men.

Correct style. Careful tailoring. Finished workmanship. Faithful wear. Known price.

The best place to buy clothes is at a store, where you can see the different styles, make your selection and get a good fit.

You buy with both eyes open at the Styleplus Store!

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AB) for Styleplus booklet and name of local dealer.

Full Power From Every Drop of Kerosene—No Waste

WATERLOO BOY

Original Kerosene Tractor

Waterloo Boy tractors are unfailingly successful in operating on inexpensive kerosene. The short superheated Waterloo Boy manifold distills kerosene into fuel of great volatile force—carries every particle of gas in the cylinders without loss of explosive power through condensation.

That's why the *Waterloo Boy* three-plow, one-man tractor plows 8 to 12 acres per day on less than 2 gallons fuel per acre. Every drop of fuel is turned into practical, tangible power for use in field work or on belt jobs.

Mechanical Excellence Backs Up Power Ability

We purposely built this tractor strong for the strain you are likely to put upon it, and stand behind it with a positive quality guarantee.

Dust proof gear construction, perfect automatic lubrication, complete and easy accessibility of gears and bearings, easy control, make it trouble proof in inexperienced hands.

There are other reasons why thousands of farmers are satisfied with their *Waterloo Boys.* Many of these users' testimony is presented in our catalog—accompanied by actual photographs of the *Waterloo Boy* in action. Write for it.

Farmer's Field Day

Written for California Cultivator By M. E. Bemis

ALTHOUGH Maricopa County in Arizona is greater in area than the state of Massachusetts farmers from all parts of it came to the Field Day, Farmer's Meeting held October 5 at the experiment station farm near Mesa. Several times before I have told Cultivator readers of the progress that is being made on this farm. The fame of the "Salt River Valley Farm," as this branch of the state experiment station is called, has been gradually spreading, and therefore it was not surprising that the number of farmers and farmer's wives that came at the invitation of the farm bureau of the county was far in excess of the number assembled at any previous meeting of this kind.

The tractor demonstration was the magnet that drew many. Eight different makes of tractors were tried out, mostly with plows, though harrows were used enough to prove the pulling power of the various types of tractors. This was the best tractor show ever held in the state. The crowds that followed these tractors was ample evidence of the interest that this new farm power has aroused among the farmers of the Salt River Valley.

Plowing stunts in both stubble and alfalfa were pulled off, and the way these sturdy little iron horses pulled away, indifferent as to whether the ground was packed or in alfalfa, was a revelation to many. The tractors were turned loose, so to speak, in a field of alfalfa that would have cut at the time, one-half to three-fourths of a ton of hay. Frequent remarks, such as: "That's a shame to plow under that alfalfa" or "That is like turning under money" were heard. The tractors didn't mind the heavy roots a bit, and the crowd seemed to be pretty well satisfied to be out of the dust that enveloped tractors and observers in the stubble field demonstration.

Demonstrations of this kind, while they may not settle the question of the superiority of any tractor, or type of tractor, give opportunity for farmers to ask questions, compare notes, and discuss the merits or demerits of each one, and while a tractor demonstration seems to an onlooker a bit chaotic, as the dust and the noise subsides so also are the minds of these who have come to be shown, clarified and opinions formed.

Not all, it is true, agree on the same machine, but not all have the same conditions, and therefore are best suited with machines that would not suit some one else at all.

The Growing Crops

Not the least interesting are the crops now growing on the farm. Some time ago I told Cultivator readers about the crops on this farm in the spring. I hope to have data on the yields of grain a little later. I understand that the wheat on this farm averaged 45 bushels to the acre. The cotton is developing nicely and some valuable data should be obtained when picking is over, which will be a valuable guide in the matter of distance apart to plant, time of planting, cultivation, etc.

Considerable work is being done with summer legumes, principally cow peas and Soy beans. Practically all known varieties of Soy beans have been tried, some of these show thrifty vines, but the poor stand of so many varieties is not encouraging. The general experience of practically all who have tried Soy beans is that they are difficult to germinate. I understand that some few farmers in the valley have inoculated with a special bacteria and when soil conditions have been just right, very favorable results have been obtained.

Until more data regarding culture methods are had, farmers will do well to go slow in planting Soy beans. Velvet beans are in the same class, and plantings proved so poor that they were plowed up.

Cow peas are decidedly more promising. Some 15 varieties are being grown, a number of these are showing up nicely at the present time and would seem to be a desirable crop where a summer legume is needed. There are some places a legume is highly desirable. It has been found that orchards where a summer crop is grown do better than with clean cultivation. The soil is a number of degrees cooler, and the humus is increased instead of being burned out.

Some orange growers have for a number of years used cow peas with good results. The effort of the experiment station is to find a summer legume that can follow grain and make a profitable forage crop or if turned under will add to the fertility and regular rotation. Where alfalfa is grown as the basis crop, there is of course little need for a summer crop. With the increased acreage of cotton, a shorter rotation in which alfalfa does not appear makes the value of a summer legume greater.

A number of varieties of cow peas are showing up nicely. The Groit seems to a casual observer to have the lead. An interesting experiment is being carried on with several varieties, the seed of which was inoculated with a special culture. These are grown alongside the same varieties, planted at the same time with the same seed, but without the inocula-

Interest in Farm Power

The intense interest in farm implements and best methods of using them was shown at the Farmer's Field Day.

tion. Superintendent Woods says, that "while results are only indicative now, it would seem that the inoculated seed is producing a heavier growth."

Tepary beans are also being grown, but it is doubtful if these will ever be considered a satisfactory crop for irrigated sections. As a dry farm crop, probably, they have some value.

Experimental plots of different vavieties of corn are also being grown, some eight or ten kinds, under similar conditions. As usual, the Mexican June is very evidently in the lead. There are several plantings of this variety, that is with seed from different sources. One is the Hammonds select which came direct from Mexico and is very promising. Superintendent Woods made some field selections last year, and has them planted in ear to the row tests. It is very interesting to note that these plantings from two ears to the stalk are producing almost invariably two ear stalks, and ears from one ear to the stalk are producing one ear stalks. This shows the value of field selections. Special attention also was given to selecting ears as low on the stalks as possible and the high ear is one—and about the only objection to the Mexican June corn. It is pleasing to note that the majority of ears from these specially selected plants are growing lower than the average ears found in average fields.

The importance of corn for silage makes it imperative that we have a variety that is adapted to this climate and that will produce well.

With a little care in selection, and possibly some corn breeding work, we will soon have the Mexican June corn where it will equal in production the corn of the Eastern states.

The farm work of the station is all that could be expected, and is of great value to those farming under similar conditions and this includes 90 per cent of all agricultural land in Arizona, and to a large extent the Imperial Valley of California.

It is to be hoped that the animal industry feature will be developed within the next few years to the same extent that the crop production has been developed. Dairying is one of the great industries, but there are some factors such as feeding problems and advantages of soiling that if more data were obtained it would be of material help to dairymen. We have very little data on steer feeding or hog raising that is particularly applicable to Southern Arizona conditions. We need carefully conducted feeding tests that will utilize the splendid crops that Superintendent Woods is growing. Last, but not least, we need some poultry feeding experiments. It is to be hoped that the coming legislature will see the need and make the necessary appropriation for such work.

FARM "ADVISERS"

WHEN the farm bureau movement first started the Cultivator took occasion to criticize the use the word "adviser" in referring to the executive officer of the organization. The taking of advice should be easy to all of us and is to many; to others it proves most offensive. As much as that fact may be decried, as much as we may say that no man who is big enough will refuse to take good advice with appreciation for the fact that it is given, it still remains true that this is generally the case.

Recognizing this weakness of human nature, most of the Eastern states have dropped the use of "adviser" and are using instead "agent", "county farm agent" or "county agricultural agent", maintaining that this official is in fact more of an agent to bring together the inquirer and the expert qualified to answer him.

Usually of course, the county agent is truly qualified to answer the questions direct and becomes in truth a real adviser, but if there is objection to the term, some other word which will not be objectionable to the farmer may well be chosen.

The Cultivator is a thorough believer in the farm bureau movement, is a thorough believer in any movement which tends to bring better understanding of the wonderfully complex questions which confront every farmer. Few callings have so many hard problems to solve, and colleges of agriculture and state experiment stations which have for their object the advancing of agricultural interests. County commissions or county farm advisers and if we may, the farm paper, should all be encouraged to extend help to every farmer, for every one needs all the competent help he can get.

Along this line came two letters in the same mail. The first we quote appreciates the opportunity offered by the farm adviser and the farm bureaus and asks: "Would you please let me know the name of and where I can get in touch with the Orange County farm adviser; and what charge does he make, if any, for his services?"

As to charge there is none, other than every farmer should become a member of the farm bureau which costs $1.00 per year.

The other letter is from a county 500 miles from Orange and takes an entirely different view of the value of the advice. We doubt not there is some misunderstanding here due to the lack of appreciation of human nature rather than to lack of appreciation of any word which will help in the production of greater and better crops. The correspondent writes:

"I cannot help but consider the whole idea of the farm adviser an insult to the energy and business sense of American agriculture, and the state market director and his office would be simply rubbing it in, if it amounted to anything more than a cheap joke—on everybody but the salary payers.

I produced about 45 tons of peaches from 396 trees—14 years old—no fertilizer, about a third of them not even plowed last year; blackberries yielded $1820 per acre net; barley sowed too late, 22 sacks per acre; a tenth of an acre of potatoes (dry land) look in the cellar like plenty for four persons until next May or June; Blackeye beans on barley ground are yielding 13 100-pound sacks to acre—but about one-fourth subirrigated and have made too much vine and not half a crop of beans; four acres alfalfa, can't tell exactly, some fed green, about 32 tons; a new variety of sorghum, canes sweet—about like Indian corn—a little over four tons of shelled corn to the acre; plenty of vegetables although we only came to this state in January.

Many small farmers, doubtless, have done much better but is there any reason why an impudent incompetent should come around here telling me what my land will raise and what I should plant, and when and how to cultivate and water and my good wife, my helper, when and how to milk our cow?

Some of my own family and many friends are serving Uncle Sam. I want to raise every pound of food I can as I seem to be too old and crippled to do anything else. The Cultivator and others of its kind from other parts of this country furnish all the advice I can digest and I don't like to be insulted in doing my work."

Regarding the point that the adviser enters on the farm, forcing his advice on the unwilling, we may say that this is contrary to the usual custom. One of the principles of the farm bureau is that its adviser or agent shall not give of his information until it is asked.

Are Farms Going to Pay This Year?

HELP IS GETTING SCARCE—THERE ARE NOT ENOUGH MEN OR WOMEN TO GO AROUND AND HUNDREDS OF ACRES WILL NOT BE WORKED THIS YEAR.
THE CLEVELAND TRACTOR WILL HELP OUT, DOING THE WORK OF THREE 3-HORSE TEAMS, WITH ONE MAN TAKING THE PLACE OF FOUR.
BUT THE BUILDING OF TRACTORS HAS BEEN REDUCED 25 PER CENT BY THE WAR INDUSTRIES BOARD.

Take Warning

Read the message from the Government in the opposite column. Read every word. Let it sink in.
It means just this—that there will be a shortage of tractors for the next twelve months at a time when the demand will exceed all previous records; when labor and horses are almost impossible to secure.
It means that the man who "puts off" will not secure a tractor.
It means that the man who will not heed the storm signals will be shipwrecked.
It means the line is to be drawn between those who think and those who don't.
Tomorrow never comes nor can you turn back to yesterday; you have but today to decide. This is a personal message for your personal good. It is to men, real men who can grasp the truth; men who, when they hear the truth, ACT.

F. H. STOW.

Here is What the Message Says Concerning Tractors:

After a very full and lengthy discussion of the needs of the Government in steel and pig iron, also the necessity of maintaining an adequate supply of farm operating equipment, including tractors, for food production, E. B. Parker, Priorities Commissioner, says that the very least they could ask this industry to contribute to help meet the government war program was a reduction of 25 per cent in the amount of pig iron and steel to be received from the suppliers for the coming year, from October 1, 1918, as compared with the quantities received during the previous year, October 1, 1917, to October 1, 1918. No amount of argument could change this decision and it therefore becomes the obligation of each manufacturer to adjust himself in the way that will serve his trade and the farmer best out of the materials allotted him as above.

FARM IMPLEMENTS COMMITTEE.
C. S. Brantingham, Chairman.

Are you going to sit by and see your land lying idle growing weeds when it could have been growing golden dollars? Call us on the telephone or write us right now and let us explain what

The Cleveland Tractor

WILL MEAN ON YOUR FARM—HOW IT WILL INCREASE YOUR INCOME MORE THAN DOUBLE THAT OF LAST YEAR.
DON'T WAIT—WE ARE ONLY GOING TO GET 75 PER CENT OF THE NUMBER BUILT LAST YEAR, WHICH AMOUNT WAS NOT ENOUGH TO GO AROUND.
EVERY ONE WHO PUTS OFF BUYING A TRACTOR IS GOING TO FEEL THE LOSS.

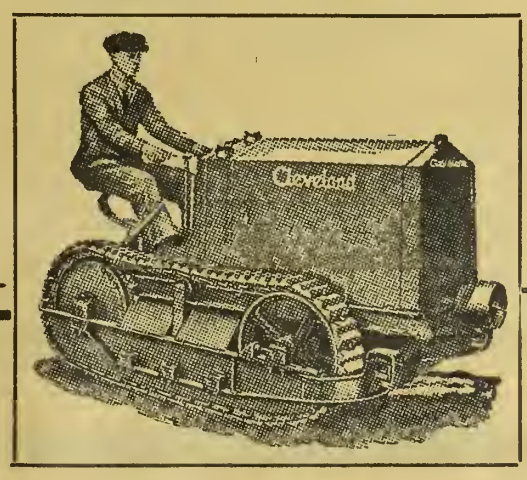
Don't forget the Gas Tractor short course at the Davis Farm.
It will pay all to attend. For owners and operators—three days, November 20-21-22. For beginners—November 11-19.



War Chest Campaign

MANY fathers and mothers in the country, knowing how strange their boy has felt in making his first visit to a large city, wonder what he does when he reaches France, where he cannot even speak the language. The organizations included in the United War Work Campaign have taken care of this feature along with many other very necessary activities in this country and overseas. It is to be expected that a boy would feel strange entering an entirely new life, whether it be in an American Army camp in this country or in France, but particularly abroad. The "huts" provided in these camps are the soldier's church and college, his gymnasium and his club. Classes in French, mathematics, history and business practice are held regularly, so that hundreds of thousands of boys who are ambitious and wish to come out of the war better than when they went into it, need not get behind in their studies and, indeed, may even acquire one or two additional languages.

The soldiers of America will not have to face the hardships which confronted the soldiers in the Civil War, North and South, and we ought to be mighty thankful for this. It means better men and cleaner lives. It ought to give the mothers a fine sense of security to know that their boys are not being wasted. There is a great satisfaction in this. We had some indication of the opposite kind of life in the Spansh-American War, and even during the days on the Mexican border, when General Pershing took his men into the Southern republic or distributed them along the frontier. We don't want any more of it. The way to prevent it, the way to bring these soldiers home right, is to provide the things they need for comfort, physical and spiritual, and for proper entertainment. These things make up the strength of the army; they supply the fighting temper, or rather they create what we know as the morale of the army. Without this morale, with the men dissatisfied, discontented, trouble is sure to ensue. No commander cares to be confronted with such a condition. The American public would not have understood this two years ago, as it understands it now. The American public has learned the lesson of giving, because through the tragic channels of the casualty list it has learned to understand its grave responsibility to the world at large. We have been self-centered. We have been content for generations to make money to grow more corn, to feed more cattle, to buy more land to grow more corn. We have seldom thought about the other fellow. But the war has changed this and now we know that America must win the Great War. Men win battles, but wealth wins wars. Therefore, the way to win battles is to make the men fit, and it is your duty and mine, and the duty of all of us to keep them fit.

More than 15,000 persons are engaged in America in agricultural pursuits of one kind or another. We have about six and one-half million farms. This means that a very large part of our armies is made up of farm boys and boys from very small towns. Let us take care of them. When the committee comes around to ask for our contribution for the United War Work Campaign, let us not try to get out of a very manifest duty by saying that we have just subscribed to the Liberty Loan. America has been in the war only a year and a half. We have not reached the outer lines of self-denial. As long as we continue to eat three good meals a day and wear reasonably good clothes; as long as we continue to have a safe shelter; as long as we are allowed to go about our ordinary daily round of duties without interference and with a large degree of certainty that we are going to sleep in security; just as long as these things continue we shall not know self-denial or sacrifice. Put these in contrast with the boy who gives his life, and you will not find much difficulty in contributing liberally to the United War Work Campaign.

LESS WORK AND MORE RESULTS

There is going to be no particular shutting off of the markets for fruits of all kinds on account of the war, and as for general crops, everyone knows what the nation and the world are demanding in the way of increased yields. It follows that every effort should be bent toward making each orchard and each field produce its maximum. Ordinary crops are not enough. Labor and other expense that must be put on any crop, good or poor, is worth too much money to permit it to bring back only medium results.

One way in which California farmers and fruit growers can increase their returns without increasing their work very much is to see that irrigation water does its duty more fully. One of the common ways in which it fails is slowness of penetration, owing to a clogged condition of the soil right below the plow-depth, particularly along the irrigation furrows or under the basins. The furrows or basins may hold water for days, while the ground 10 or 15 feet away may be little dampened.

Deep penetration of water, uniformly and evenly throughout all of the soil, is a vital thing, and on it depends the sure development of big crops to a large extent. The only way to secure it is to open up the lower soil with powder. Light charges only are required, for the top four feet is enough to have loosened. The blasting should be followed by the planting of a heavy-rooted cover crop of some annual plant, in order that the roots will go down into the loosened soil and be a source of organic matter when they die. They help greatly in this way to maintain the loosened condition.

The soil that is not loosened, under the reach of surface cultivation, becomes so compact and tight that it acts as a filter, permitting the water to pass through slowly only, and hindering very seriously the movement of water upward later on. In fact, a clogged soil may hold only half as much water between irrigation periods, in capillary form, and that it does hold is prevented from moving upward and in other directions as freely as it otherwise would. To wet such a soil to the extent that surface indications show is enough takes much more water than it should, while a good deal of this water is wasted by sinking too deep through the softer spots and by escaping through drainage channels.

The ground, however, must be very dry when it is blasted, otherwise pot holes will be formed, and a good deal of the very compacting that it is desired to break up will be caused. The test is to take a sample from a depth of a couple of feet. If it crumbles and powders in the hand under pressure, and runs through the fingers when the hand is opened, it is dry enough to blast. If it compacts and molds to the shape of the palm under the pressure, it still is too plastic, and blasting should be delayed for better conditions.

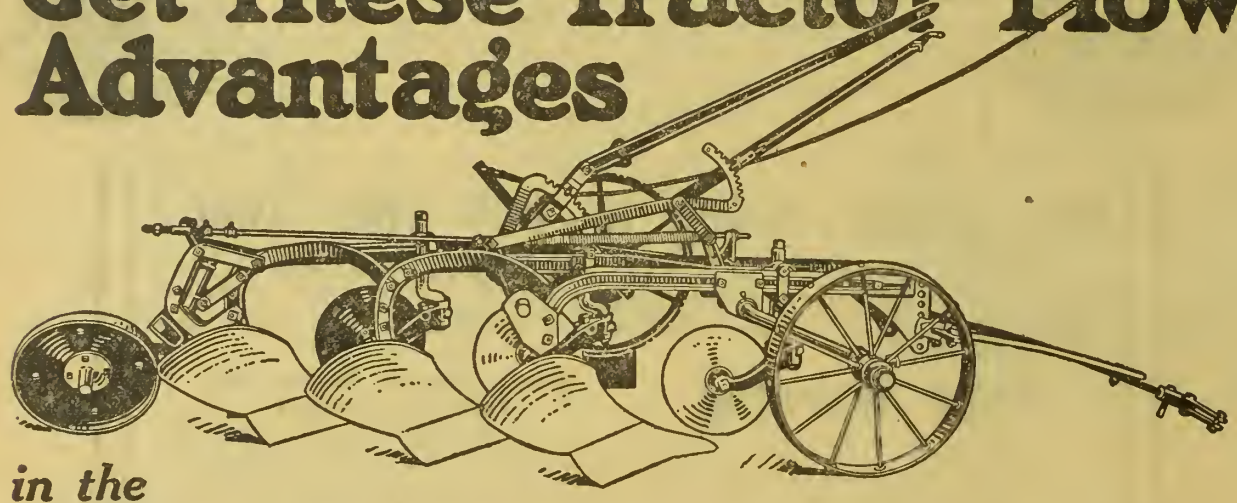
Get These Tractor Plow Advantages



in the

JOHN DEERE TRACTOR PLOW

Specially Adapted for Plowing in California

There is special satisfaction for you in using the John Deere No. 5 or No. 6 Tractor Plow because these plows are built to meet the particular plowing requirements of California.

They are unusually steady running. Controlled by the wheels at all times because the axles are rigidly fastened to the beams. Land wheel is set back, balancing the weight of the plow over all of the wheels and insuring even depth of plowing in uneven ground. The plows get down to position quickly and stay in the ground while plowing.

Exceptionally strong in every part. Beams warranted not to bend or break. Beam braces have extra long lap. Large bolts and lock washers hold all parts rigidly to place.

Simplest and most dependable power lift ever designed. No chains or sprockets. Powerful clutch engages positively, raising bottoms high and level.

Location of land wheel and front furrow wheel permits plowing close to trees or vines in throwing either to or from the row. Both levers out of the way of limbs while plow is at work.

Unusual clearance for unhindered work in trashy land or in deep plowing.

Quick Detachable Shares save time and labor without sacrificing strength or close fit. Loosen one nut to take a share off. Tighten the same nut and share is on tight.

Genuine John Deere bottoms wear, scour and pulverize to best advantage.

Hitch adjustable for any standard tractor. Two, three and four-bottoms sizes, 10, 12 or 14 inch cut per bottom.

You will find these plows especially dependable for better and longer service. Investigate them at your first opportunity. Your John Deere dealer will show them to you.

Send for Free Books Write today for our free booklet describing fully the John Deere Light Tractor Plows. It has a message on tractor plow value that you will find profitable to you. Ask also for our big free book *"Better Farm Implements and How to Use Them."* Its 156 pages describe a full line of labor saving implements—(tells how to adjust and operate many of them). It is full of practical information that will help you. Put it in your library. Use it as a reference book. It will be worth dollars to you.

To get these books, mention the implements in which you are interested and ask for package PT2 2.

John Deere Plow Company
San Francisco, Cal.

and crops is concerned, there is no reason for waiting when the soil is right. It may be that the blasting causes a little upsettage of feeding, for a few days, but it is slight. Small charges properly loaded may be used about any tree at any time without any noticeable harmful effect, and all field crops may have the ground under the plant blasted without trouble resulting. The important thing is to get the subsoiling done, so that the all-important water will reach every inch of the lower soil.

STEEL REDUCTION TO TRACTOR MANUFACTURERS

A war measure of very serious proportions was recently taken by the government when an order was issued that tractor manufacturers were to be cut down 25 per cent in their allotment of steel. Heretofore they had been granted special privileges in the matter of their material, as the government realized and does still realize that the tractor is an essential on the farm.

It is, of course, with considerable regret that the tractor manufacturers have to curtail their output, but not one of them would deny that the first thought for this government and for the people is the winning of the war and if it becomes necessary for them to make fewer tractors so that more steel can be put into Hun chasers, then there will be fewer tractors for the farmer to purchase and he will have to be satisfied.

But it is possible at this time to fortify one's self against any shortage by giving orders for tractors at an early date. When one has determined that he must have a tractor and has given the matter of purchase careful consideration and has determined upon the machine that he will buy, it is his privilege to place an order for that tractor, and he will thus be placing himself in line for the machine when one is available.

The tractor situation is very interesting at this time. For the past year manufacturers have been sold several months ahead and the question has been with the buyer "Can I get my tractor soon?" rather than with the manufacturer, "Can we sell our output?" With the reduction in the allotment of steel to the manufacturers the situation will become more acute than ever and it will be a question with the buyer "Will you please get me a tractor?"

It is advisable, therefore, to place your order early if you expect to be supplied with this much needed machine, for manufacturers and representatives must supply their early orders first and it is up to the buyer to get his order well to the front of the list. A wait of from three to six months may mean much loss. That can be obviated by being sure that the tractor will be on hand at the wanted time.

DON'T SELL WHEAT BELOW GOVERNMENT PRICE

Federal Food Administrator Herbert C. Hoover, through the California food administration, today cautioned farmers against selling their wheat at a price lower than that fixed by the government.

The slow movement of the grain and the temporary slack in the market, which has occasioned alarm on the part of some growers, was explained by Hoover in the following dispatch:

"The enlarged demands by General Pershing for military supplies resulting from his progress on the western front has necessitated temporary diversion of grain ships for this service. This has temporarily curtailed wheat movement from the seaboard and has filled seaboard and terminal elevators, thus checking movement.

"It has been reported that some farmers have become panicky and are selling wheat at less than the government price. There is no occasion for this. The wheat will all be moved and the full price secured by all farmers, if they will have a little patience."

DRAFT THE SLACKER ACRES

The University of California is making a campaign for drafting every idle acre capable of growing wheat or other foods. This work is being supplemented by organizations in various parts of the state, at least we note the chamber of commerce of San Diego County is sending out blanks to property owners who have lands not now under culture, urging the owners to list their lands with the chamber. The blank gives opportunity for listing name of owner; location; general character of the soil; is it fenced; if leased, for cash or share of crop, etc.

Through the division of agronomy, college of agriculture, Berkeley, about 175,000 acres of land have been listed as available for lease or purchase. The applicants for these lands should have sufficient capital to purchase tools, stock and seed; experience in farming is necessary.

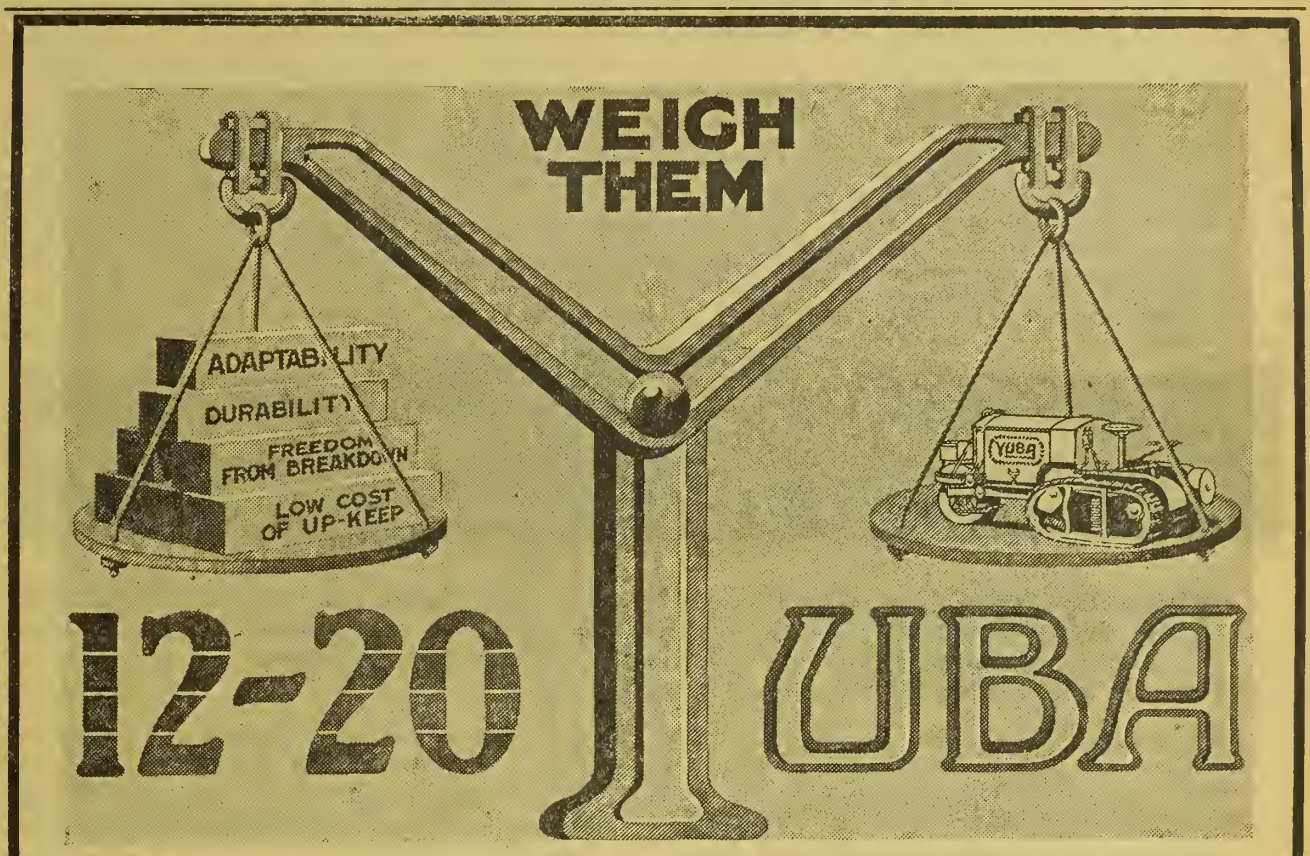
The tracts vary from five to 64,000 acres in extent, and include level, irrigated lands, suitable for alfalfa and similar crops, as well as rough, hilly ranges, suitable only for stock ranches. Most of the land is unimproved and adapted to dry farming of grain. A few ranches completely equipped with buildings, fences, stock, tools and with water for irrigation are listed.

FARMERS AUTHORIZED TO KILL WILD DUCKS

Wild ducks in the rice fields of Butte, Colusa, Glenn, Sutter, Yolo and Yuba Counties may be shot when necessary to protect crops, according to an official telegram from Washington to Carl Westerfield, executive officer of the fish and game commission of California. The ruling holds good until October 15. Only rice farmers, members of their immediate families and employes, however, may shoot the ducks, and they must shoot in open field.

Another restriction in the ruling keeps farmers from selling these ducks, and provides that they must either eat them or send them to charitable institutions or hospitals.

In the presence of a common enemy we sit at a common table with all people defenders.



THE Yuba Model 12-20 Tractor is equal to every requirement: adaptability, durability, freedom from breakdown, and the unusually low cost of upkeep.

Pile in the scale all important features which constitute a good tractor, or load-pulling machine—the balance is in favor of the Yuba 12-20 Ball-tread Tractors.

They plow; they harrow; they pull stumps; they pull planters, cultivators, bean cutters, rice binders, haul on roads—and almost float in mud.

They never "wear out."

The Yuba 12-20 Tractors have personality. They glide over the ground on frictionless, hardened steel balls.

On side-hill work, with their locked-on track, they are unique in effectiveness.

The Yuba 12-20 is compact, easily handled, and especially adapted to the cramped quarters in orchard or vineyard.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

No Bounty

Please inform me as to whether there is a bounty on coyotes in Los Angeles County.—Subscriber, Lancaster.

There is no bounty on coyote scalps in Los Angeles County.

Fertilizer Questions

Will you please tell me through the columns of your paper the best method of preserving chicken manure for use in an orange grove? I am sprinkling bone meal on dropping boards and cleaning daily. What form of container is best, and should droppings be kept dry? Does gypsum have a chemical or only a mechanical action in preserving the nitrogen contents of the manure? How is composting done?—Subscriber, Rialto.

There is no better way than to take the scrapings direct from the dropping board to the garden or orchard and work into the soil. If, however, one wishes to compost the mixing of this combination of droppings and bone meal with soil, leaves, garbage, weeds, or any vegetable refuse, thoroughly wetting, makes a magnificent potting soil or fertilizer for placing around plants. The compost must be kept moistened; also in case of very heavy rains leaching should be prevented. Where the droppings are kept in barrel or other container and are stored with sufficient bone meal there is no danger of moisture causing loss of ammonia. Gypsum is also a fine absorbent and it saves the ammonia or nitrogen. It also has a chemical action when applied in the soil and releases quantities of potash which may not be available without it. Composting may be done by simply piling layer of weeds and other refuse and then another layer of soil, chicken manure, or other substances, repeating with weeds, soil, and manure, and maintaining proper moisture conditions for some months.

Storing Root Crops

What is the best method of storing root crops, carrots, beets, etc., during the winter months in the absence of a cellar, cave, or "adobe"?—Subscriber, Hemet.

The method of storing root crops in California usually is to leave them in the ground and pull as needed. If already pulled up throw on the ground in the shade and that will probably answer. However, for those who wish to go to the trouble of storing the roots here is the method as followed "back East."

"Potatoes, cabbage and root crops can be stored cheaply and efficiently in outdoor pits or banks if no cellar is available. Select a well-drained spot for the pit; and a shady spot is preferable. Remove the surface soil to a depth of one foot from a circular area not more than seven feet in diameter. This will allow for a conical pile of vegetables four feet high containing about 15 bushels. If more are to be stored, make additional pits or extend the one into a long low bank.

Potatoes and cabbage may be placed in the pit in direct contact with the soil, but for other vegetables it is better to line the pit with three or four inches of straw. When the vegetables are placed, cover them at once with a layer of straw, leaves or cornstalks to a depth of six inches, which will be all the protection needed until cold weather. Then a layer of earth from six to ten inches deep should be placed over the whole pile, and the ridge rounded off to shed the rain. To provide ventilation, the inner straw layer is allowed to protrude a few inches at the peak of the ridge. This should be sheltered by an inverted trough."

Formula for Ant Poison

Would you please publish the formula for the poison used in citrus orchards for eradicating the small black ant?—Subscriber, Hynes.

Would refer subscriber to article by R. S. Woglum in issue of the California Cultivator of March 30, 1918. On page 394 he gives formula for the poison and drawings of tin cans and sacks attached to the trunks of orange trees. The formula recommended by Prof. Woglum is: Twelve pounds granulated sugar, seven pints water, one-quarter ounce tartaric acid (crystallized). Boil 30 minutes. Allow to cool. Add water equal to that evaporated. Three-quarters ounce sodium arsenite (chemically pure only), dissolved in one pint hot water. Cool. Add poison solution to syrup and stir well. Add to the poisoned syrup two pounds honey. Mix thoroughly.

Preserving Fence Posts

I have a number of eucalyptus posts I intend to set this winter. Do you know of any preservative treatment which will prevent them from rotting in the ground? — Subscriber, Olivewood.

There is nothing better than hot creosote. Eucalyptus posts after being thoroughly seasoned should be soaked in hot creosote or linseed oil. Otherwise their life in the ground is very short. Soak lower end up to six inches above surface of ground. Write United States Department of Agriculture, Washington, D. C., for Farmers Bulletin 387, "The Preservative Treatment of Farm Timbers."

Strawberry Plants Died

I set 100 strawberry plants this spring. They grew nicely for a time but began to die off one by one though I watered and gave good care. What do you think caused the trouble?—Subscriber, Upland.

Of course such limited information gives opportunity for only a guess. Their death may have been caused by strawberry flea-beetle, thrips or other insect. If subscriber will send leaves from plants still living it is possible they may show fungous trouble.

Iron for Fertility

A neighbor applies old scraps of iron, wires, horse shoes, etc. to his orange trees, saying the iron gives good color to the fruits. It seems to me he is ruining his orchard for the iron may take oxygen from the roots, destroying them. What do you think?—Subscriber, Upland.

There have been a number of experiments made under the eyes of trained observers as to the value of scraps of iron; but we believe there is no evidence of their being of benefit. We also believe there would be no harm whatever from their addition, for any soil which is sufficiently cultivated would have a full supply of oxygen. Experiments have also been made in the addition of iron in the form of sulphates. This likewise has shown no marked advantage and proves to be rather expensive.

Acorns for Turkeys

Are the common acorns good feed for turkeys? Can they be preserved and stored for winter use? How should they be fed, whole or ground? —Subscriber, Los Angeles.

As I have never fed acorns to turkeys nor talked with anyone who had, and am unable to find in Henry & Morrison's "Feeds and Feeding" or in any other book at my command any reference to the use of acorns as feed for any kind of poultry or stock, I cannot answer the question positively, but the fact that no such mention is made is reasonable ground for doubt. Henry & Morrison list acorns as concentrates along with beet pulp, cocoa

A Tractor Must Have Reserve Power Such As This Case 10-20

THOUSANDS of Case 10-20 Kerosene Tractors are in use all over the country — probably in your neighborhood. We are proud to state that one of their outstanding features is Reserve Power. Owners everywhere tell us that these tractors easily meet unusual conditions. They are ready for frequent and unexpected overloads.

The drawbar rating is 10 horsepower, which is equivalent to a 1650 pound pull while traveling 2¼ miles per hour. But this sturdy machine will exert a pull of 2600 pounds on the drawbar, when necessary.

This shows our conservative rating. The 10-20 is recommended for pulling three 14-inch plows, which it handles easily in sod or stubble. The Reserve Power is always at hand for more difficult jobs or for grades.

And the Reserve tends to prolong the life of the machine, for it is usually working at its normal capacity. Continuous, undue strain is thereby avoided.

This Case 10-20 will also handle other implements usually requiring 8 to 10 horses, such as two 7-foot binders, two 20-shoe grain drills, eight sections spike-tooth harrow, 8 to 10-foot double disc harrow and other implements of like requirements. For belt work, this tractor has proven equally efficient. It drives a Case 20-inch cylinder thresher with wind stacker, feeder and grain handler. Also silo fillers, hay presses, feed mills, etc.

For all 'round use this Case 10-20 demands your investigation. It has proved its worth. It is economical in operation, *burning kerosene successfully.* It is built of the finest materials. It is bound to give maximum value for your money.

Investigate the Case 10-20 and other sizes of Case Kerosene Tractors before you decide.

A complete description of the Case 10-20, with pictures and specifications, will be sent free upon request. Or visit a Case Dealer.

J. I. Case Threshing Machine Company, Inc. *Founded 1842*
1361 Erie Street, Racine, Wis., U. S. A. (800)

shells and bread, which does not give us very much light. The fact that the nutritive ration of kernel and shell ground together is 1:19.5 and that of the kernel alone 1:13.1 does give us a little, and the fact that there are only 47.1 pounds of digestible nutrients in 100 pounds a little more. I have heard that acorns are good feed for pigs, but Henry & Morrison do not mention it. I should not like to experiment with feeding them to turkeys unless I had very explicit advice on the subject from some one who had given them a thorough tryout. If any Cultivator reader has tried acorns for turkeys we should be glad to hear from him.—J. A. K.

Scale on Lantana

What is the insect on lantana herewith? I refer to the small insect like a white fly along the stems. What is the treatment? They have destroyed a large thrifty lantana bush and other nearby plants are seriously injured. —Subscriber, Los Angeles.

This question was referred to Prof. H. J. Quayle of the Riverside experiment station and he writes:

"This insect is a species of scale having the scientific name of Orthezia insignis, an insect that attacks a number of greenhouse and ornamental plants. The best means of control is to apply a spray, preferably a kerosene emulsion, if the plants will stand this spray. The difficulty of handling this or any other pest on ornamental shrubs is the danger of injury to the plants. Lantana will probably stand the emulsion of kerosene, and this may be repeated two or three times. Kerosene may be used in the proportion of one gallon to 15 of water with enough soap to make an emulsion."

Almond Hulls Poisoning Soil

What is in almond hulls which prevents growth of vegetation for a long time on land where they are scattered? Most growers burn them.—Subscriber, Vacaville.

This question is asked by M. Sharpe, a Vacaville fruit grower, and we pass it on to our subscribers hoping it may bring out the experience of others.

Pear Leaves Blackened

What is the name of the trouble that turns pear leaves black in the summer, but does not affect the wood and sometimes only half of the leaf?—Subscriber, Vacaville.

Presumably it is not pear blight, for that seldom stops with the leaves or even the tip ends of the twigs. Have other subscribers observed the same behavior of pear trees?

Cull Fruit for Poultry

To what extent can cull tomatoes, apples, or other such cull fruits be profitably fed to poultry; and what is the best method of feeding them?—Subscriber, Hemet.

Tomatoes and fruit may be fed either raw or cooked, as is most convenient, but great care must be taken not to overdo such feeding. There seems no question that heavy feeding of tomatoes checks laying. As to apples the doctors disagree, but it would seem a pity to waste them on chickens, for which they are of doubtful benefit, when the human need is so great. Neither tomatoes nor apples contain any real material for egg manufacture. They are at the best green feed and do not take the place of the grain and animal food necessary to egg production.—J. A. K.

Dry Buttermilk

Where can "dry buttermilk" for poultry feeding be obtained? — Subscriber, Hemet.

I think you must mean semi-solid buttermilk, which comes in barrels and can be had from any of the large supply houses at seven cents a pound. There is also a preparation of dried skim milk which is used for chicks. Sometimes this can be had at supply houses and sometimes not. The semi-solid buttermilk is a standard preparation shipped from the Middle West and largely used by poultrymen hereabouts.—J. A. K.

How Much Feed?

Can you tell me approximately the number of pounds of feed, (barley and milo) grain and mash. required to grow Rhode Island Red stock up to fryer size, three to three and a half pounds?—Subscriber, Live Oak.

According to figures tabulated by the Connecticut station, a Rhode Island Red requires three pounds of feed for the first pound of weight, 3.2 pounds for the second pound of weight, 6.5 pounds for the third pound of weight and ten pounds for the fourth pound of weight. Approximately, then, 18 pounds of feed would be needed to bring a chick to three and one-half pounds in weight.—J. A. K.

INFLUENZA PREVENTIVES

The United States public health service by Surgeon General Rupert Blue is giving information regarding epidemic influenza and precautionary measures, which may be taken. From the summary of the bulletin we quote the following sanitary suggestions:

Attention to cleanliness of the mouth, adequate ventilation, avoidance of exposure to cold, and isolation from those who may be carriers of virulent pneumococci and streptococci are measures advisable to prevent complications. Aspirin or similar remedies may be used to relieve headaches and general pains. Watch should be kept for complications, and cases should not be discharged too early.

Crowded offices, and particularly street cars, are potent factors in the spread of the disease. In Berlin the street car conductors showed an exceptionally high incidence. The avoidance of street cars and of crowds, where possible, is therefore to be urged during an epidemic, although the disease is too mild to make it advisable to stop all the activities of a city. To prevent the transportation of the influenzal virus to the well and possible causes of complications to the sick, masks for sick-room attendants are advisable. The organism is probably short lived outside the body, and attention should be directed toward keeping people apart rather than toward the disinfection of things, aside from the precautions of general cleanliness. The spread of streptococcus pneumonia in military camps, and the fear that with the advent of cool weather severe pulmonary complications will follow influenzal attacks more frequently than during the past summer, indicate the urgent need for the adoption of more stringent precautions to prevent such complications than have been customarily taken hitherto.

The most dangerous form of human contact in the presence of epidemic influenza is, in all probability, that with coughers and sneezers. Coughing and sneezing, except behind a handkerchief, is as great a sanitary offense as promiscuous spitting, and should be equally condemned.

GROW A GARDEN

The International Harvester Company of Chicago is appealing for greater production and, in fact, aiding materially in greater production, especially along home garden lines, by the publication of "Grow a Vegetable Garden," a 42 page book filled with illustrations of labor saving devices, with planting tables and general garden hints.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler

of the "Giant" Type

WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

YOU SHOULD
send for our LATEST catalog J-600 which is full of interesting information on LABOR SAVING DEVICES and machines for moving the earth.

Increase Your Alfalfa Tonnage—Plant Germain's Hairy Peruvian Alfalfa Seed.

Germain's HAIRY PERUVIAN

Why not plant the kind of alfalfa that will give you the maximum yield? It is the patriotic duty of every farmer during these critical times to make each acre produce to the extreme limit. Hay prices are destined to soar sky high, according to the best authorities.

Germain's Hairy Peruvian is the *heaviest producer* known. It grows vigorously in all climates—does well at 5000 feet or at sea level.

Our limited supply is rapidly being sold out. Your order should be placed at once.

Edward Richmond of Wilmington, Cal., says: "I cut Hairy Peruvian alfalfa five times in six months from planting. Reserve 200 pounds more for me."

To be on the safe side order only Germain's Hairy Peruvian—sold only in sealed and stenciled sacks.

Before planting, inoculate seed with FARMOGERM and get larger and better crops, which mature earlier than crops from untreated seeds.

When you write please mention this magazine.

About Sheep for Beginners

IN a bulletin of the Illinois state experiment station we note some hints for the beginner in the sheep industry. A few of these hints may have interest for California farmers who have occasionally waste ground which should be turned into mutton and wool.

The selection of the right kind and the proper number of sheep are large factors in the success of the beginner in flock husbandry. High prices for mutton and wool have brought about an unusual demand for breeding sheep. Many flocks are being established throughout the middle western and eastern parts of the United States and flock owners who have been keeping sheep for a number of years are disposed to retain all their good females. As a result, breeding ewes are so scarce that there is a good market for the undesirable kinds. But it is a mistake for anyone, especially for a beginner, to buy these inferior grades. Rather than to buy unthrifty ewes, improperly bred for producing lambs and wool on a profitable basis, it is better, as a rule, not to start with sheep at all.

Number of Ewes

The beginner can learn more about the types and habits of sheep from a small flock than he can from a large one. If he has a flock of 25 ewes, it is easily possible for him to take note of the capacity of each for producing lambs and wool. He develops a conception of the type of ewe that is prolific, motherly, and able to produce enough milk to grow her lambs rapidly. By observing certain individuals from day to day, he also becomes familiar with the habits of sheep and learns to know when they are slightly "off" in health. Often a little attention in the first stage of illness will restore a sheep to complete health, but if it is neglected until it no longer attempts to stay with the flock the task of treating it is much more difficult.

The beginner should buy enough sheep, however, to justify giving them adequate attention. Except in certain periods such as lambing time, 15 to 25 ewes require little, if any, more care than from two to ten head. A busy man with three or four sheep on his hands will find that they require more time than the returns will justify, and he will be tempted to neglect them. Even boys and girls above 12 years of age, enrolled in the lamb clubs, would better have from four to ten ewes rather than only two.

Owners of large farms who are experienced in handling classes of live stock other than sheep may find it advisable to start with a carload of ewes. By handling such a number on a large farm, the flock is more likely to receive proper attention, and in selling the lambs there is a distinct advantage in having enough to make a carload.

Where to Buy

The beginner desiring 25 ewes or less should select, if possible, from healthy well-bred flocks in his home community. He will know more about his ewes than he would were he to purchase them on the open market, and he avoids a heavy freight bill. But in many cases there are no desirable ewes for sale in the home community and the only recourse is to go to commission firms on the open market or to dealers operating outside of established markets. Before purchasing from any dealer, satisfactory information relative to his ability and integrity should be obtained.

Kind to Buy

There are two general classes of ewes, natives and westerns. The natives are produced in the farm flocks of the middle west and east; the westerns in the large flocks or bands kept on the ranges of the west. As a rule, the natives are larger and fatter than the westerns and hence cost more per head.

At the Fresno Fair

By R. P. Royce

(Continued from last week.)

SWINE SHOW

The swine show was the best balanced of any of the live stock exhibits. Nearly every class of Poland-Chinas and Durocs was well filled. Only two Berkshires were in the pens. Considerable interest was manifested in the judging and exhibitors stated that inquiry for breeding stock was keen throughout the week.

King Big Bone Leader, grand champion Poland-China boar at Sacramento, was shown again to the championship by his owners, Chas. Gatewood and Son, Fresno. H. I. Marsh, Modesto, had his remarkably good herd entered. This is one of the strongest herds that has been brought out in this state, and it is doubtful if any California herd has shown as many real big sows as the Marsh entries. His aged sow, Big Knox Girl, was made grand champion sow.

J. E. Thorp, Lockeford, had the grand champion Duroc sow. W. F. Fulgham & Son, Visalia, won the boar championship on a seven year-old-boar. Thorp showed the junior sow pig that won the state fair futurity but she only succeeded in getting third to two shown by H. Cummins, Visalia.

Professor J. I. Thompson, of the University of California, judged all the hog classes.

Poland-Chinas

Exhibitors: H. I. Marsh, Modesto, Chas. Gatewood & Son, Fresno; F. Gatewood, Fresno; A. Buckland & Son, Fresno.

The awards:

Aged boar—1, H. I. Marsh.

Boar, one year old and under two—1, Chas. Gatewood & Son.

Senior boar pig—1, H. I. Marsh. 2, F. Gatewood. 3, Chas. Gatewood & Son.

Junior boar pig—1 and 2, H. I. Marsh.

Aged sow—1 and 2, H. I. Marsh. 3, Chas. Gatewood & Son.

Sow, one year old and under two—1 and 2, H. I. Marsh.

Senior sow pig—1 and 2, H. I. Marsh. 3, Chas. Gatewood & Son.

Junior sow pig—1, H. I. Marsh. 2, A. Buckland & Son. 3, Chas. Gatewood & Son.

Sow and six pigs—1 and 2, A. Buckland & Son. 3, F. Gatewood.

Boar and three sows—1, H. I. Marsh. 2, Chas. Gatewood & Son.

Champion boar—Chas. Gatewood & Son.

Champion sow—H. I. Marsh.

Duroc-Jerseys

Exhibitors: J. E. Thorp, Lockeford; Henry Cummins, Visalia; W. F. Fulgham, Visalia; C. E. Ellis, Tulare; Allen Thompson, Tulare.

The awards:

Aged boar—W. F. Fulgham & Son.

Boar, one year old and under two—1, Allen Thompson. 2, J. E. Thorp.

Senior boar pig—1 and 2, Henry Cummins. 3, Allen Thompson.

Junior boar pig—1, J. E. Thorpe. 2, Henry Cummins. 3, Allen Thompson.

Aged sow—1, J. E. Thorpe.

Sow, one year old and under two—1 and 2, J. E. Thorpe. 3, Allen Thompson.

Senior sow pig—1, C. E. Ellis. 2, Allen Thompson. 3, C. E. Ellis.

Junior sow pig—1 and 2, Henry Cummins. 3, J. E. Thorpe.

Sow and six pigs—1, W. F. Fulgham & Son. 2, Allen Thompson.

Aged herd—1, J. E. Thorp. 2, Allen Thompson. 3, W. F. Fulgham & Son.

Young herd—1, Henry Cummins. 2, J. E. Thorpe. 3, C. E. Ellis.

Champion boar—W. F. Fulgham & Son.

Champion sow—J. E. Thorpe.

THE SHEEP

J. Bidegaray, Fresno, was the only exhibitor of sheep but he entered nearly 100 head of Rambouillet and Hampshires.

AN INTERESTING COMPARISON

J. W. Coppini, a dairyman at Ferndale, Humboldt County, whose three years' experience in cow testing has resulted so remarkably, sends tabulated statement from his cow testing records for the three years. From March, 1906, to March, 1907, his 20 cows averaged 8,108 pounds of milk and 327½ pounds butterfat. His milk that year tested four per cent. His cows were all common, no particular blood predominating. The cows were pastured the year round and fed in addition a liberal ration of roots in the fall and winter months.

Another test from January 1, 1909, to January 1, 1910, showed the average production per cow to be 7,447 pounds milk, testing 4.9 per cent; average butterfat production, 367½ pounds. Four of these cows were registered and ten grade Jerseys, seven common or mongrel cows.

Another test made in 1917-18 showed an average for 22 cows; milk, 8,997 pounds, averaging 5.7 per cent fat, with an average butterfat per cow of 510.09 pounds. The herd consisted of ten registered and 12 high-grade Jerseys. Pasturing was continued, though from March until roots were ready green grass and clover were cut and fed in the barn and the cows received a ration of concentrates twice daily commencing about six weeks before cow freshened.

There is nothing startling in these records made by Mr. Coppini's herd. It is not a large herd; it is not handled as a plaything by a man of wealth; but is merely a dairy conducted to make a living for the family of the owner. Careful testing at times under the supervision of the University of California has, however, shown Mr. Coppini wherein his herd was weak, and the unprofitable cows have been sent to the block and others of more desirable strain purchased or bred up.

PERCHERON SOCIETY ANNUAL

The next annual meeting of the stockholders of the Percheron Society of America will be held in Chicago December 2. The Percheron judging at the International Live Stock Exposition begins early the following morning.

The future of draft horse interests is especially bright. Shortage of men is compelling greater utilization of horse power. Six and eight horse teams will be as common within the next two years as four horse teams have been in the past. The use of more heavy horses will increase the daily work done by each man on our farms by 50 to 100 per cent. Eight and ten horse teams have been common for years on the Pacific Coast. Fifty acres plowing per week is the average per man. As horsemen and farmers, we must learn to use these larger units of horse power effectively, thereby increasing the demand for good Percheron horses.

Percheron breeders in America are gratified over the recent sale and shipment of 26 Percheron fillies and one stallion to Great Britain. These are already on the way overseas. They were purchased by Hon. Alexander Parker, who spent some time in America as a purchasing officer in the British Remount Service.

Additional shipments are sure to follow and our American Percheron breeders will undoubtedly exert themselves to build up a favorable export trade not only with Europe, but with Australia and New Zealand.

OUTPUT OF MILL FEEDS

To acquaint farmers with conditions prevailing in the mill feed industry the food administration outlines developments that may be useful as a guide when purchasing feeds. Most of the European countries have gathered their harvests and are now grinding wheat. The foreign demand for flour from the United States has slackened and has been replaced by a considerable demand for American wheat.

Shortage of animal feeds prevails among all the Western allies, who now prefer to purchase wheat rather than to buy flour and mill feed separately. Wheat can be loaded very rapidly aboard ship on the American seaboard by mechanical conveyors. This operation consumes much less time than loading the equivalent of wheat as flour and its by-products and saves space.

One result of this development is a temporarily light production of wheat mill feeds in the United States. It should be recognized, however, that even with normal production of such feeds, the demand was expected to exceed the supply since the schedule of fair prices establishd for feed at the suggestion of the agricultural advisory committee has made it very cheap, much cheaper in fact than it is worth compared with other feeds of equal nutritive value.

The reduced output of wheat mill feeds is accompanied fortunately by an unusually large production of certain coarse grain products. Food administration regulations provide for an extraction from barley of only 55 per cent flour, leaving nearly 45 per cent of the barley berry for feed which is remarkably rich and nourishing. Barley feed in itself is not a substitute for bran but needs to be mixed with other light material, such as oat feed, to give bulk. There is an ample supply of oat by-products at prices averaging less than the cost of bran.

As a result of the large wheat crop the "fifty-fifty" rule requiring the purchase of equal amounts of substitute cereals with wheat flour has been modified, and this is expected to increase the output of American flour mills and result in more mill feeds.

The food administration recognizes that the amount of brewers' grain is less than normal and distillers' grains have almost disappeared from the market. Corn by-products, though uncontrolled in price, are plentiful. The period for which these conditions are likely to prevail is undetermined, but the situation will be materially changed when foreign orders for flour from this country are again being filled.

Wheatless days in America make sleepless nights in Germany.

The Bargain Sale

90 Registered Holstein-Friesian Cows
15 Registered Holstein-Friesian Bulls

at Public Auction

for

A. W. Morris & Sons Corporation

Woodland, California **Tuesday, November 12, 1918**

It is easy to forecast the many wonderful bargains that buyers will find in this sale, for there will be sold some of the great cows that have contributed in no small way toward the world wide fame of the Morris herd as producers, and they are bred to the great quintet of Morris herd bulls, every one of which has sired a world's record daughter or has for a dam a cow that made one or more world's records. No other herd in the world has five herd bulls so qualified.

Just stop and think for a moment that many of these great cows are bound to sell far below their real value because of age, or in some cases lost quarters, and that they are yet vigorous breeding cows and tremendous producers of milk and butter, and then consider also that many of them are due to drop calves from a week to two months after sale to the service of wonderful sires whose get command top prices whenever offered.
It will be a golden opportunity to buy the highest priced blood in the west at ordinary prices. As a sample of what the sale will contain just look at a dozen of the individual cows listed in the squares below.

PET SALAMBO OF RIVERSIDE
Butter seven days 33.03
Milk 365 days 22,287.00
Butter 365 days 1,003.80

LEDA GERBEN ALCARTRA 2ND
Butter seven days 29.87
(As a senior four year old.)

Butter seven days 27.34
(As a senior three year old.)
Butter 365 days 678.60

MISS GELSCHE WALKER KORNDYKE
Butter seven days 23.16
(As a junior two, former state record.)

IMPERIAL BONITA
Butter 365 days 762.00
Milk, over 18,000.00

Keep In Mind These Facts:

EVERY ANIMAL IN THIS SALE is positively guaranteed to be a breeder.

NO ANIMAL IN THIS SALE is tuberculin tested.

TWENTY-FIVE FRESH COWS will be in this sale.

A VERY LARGE NUMBER OF HEAVY SPRINGERS in calf to King Mead of Riverside, Prince Gelsche Walker, Sir Aaggie De Kol Acme, and Segis Pontiac De Kol Burke will be sold, besides a few in calf to King Korndyke Pontiac 20th, the $6500 son of Miss Valley Mead De Kol Walker, and one cow bred to Segis Pontiac Abbekerk, the 35 pound bull that sold for $3200 last spring.

THIRTY YEARLY RECORD COWS with records up to over 24,000 pounds milk and over 1000 pounds butter will be sold.

THERE WILL BE 38 COWS with seven day records from 20 to 33 pounds butter, three of them above 30 pounds.

Catalog in preparation. Write for one.

We Have Been Telling You

that PRINCE RIVERSIDE WALKER is siring a mighty fine lot of calves in our herd, and prospective buyers who have come to look at his young sons have agreed with us for we have sold right down to calves all the time.

Now we have some expert opinion on the young sons and daughters of "Prince," in the form of awards at the recent California State Fair in the hot competition of the younger classes. Sons and daughters of PRINCE RIVERSIDE WALKER were placed as follows by Judge Scribner:

First Junior Bull Calf.
Fifth Junior Bull Calf.
Reserve Junior Champion Bull.
Second Senior Heifer Calf.
Fifth Senior Heifer Calf.
Reserve Junior Champion Heifer.
First Prize Breeders Young Herd contained some of his daughters.
Second Prize Calf Herd.
First Prize Produce of Dam, won by his twin sons.

Hadn't you better consider one of his young sons to head your herd, securing a rare combination of breeding and type?

Our Entire Herd is Tuberculin Tested

P. S.—Our junior herd sire, King Korndyke Pontiac 20th, was a second in class at the State Fair to the bull that was again made grand champion.

Duroc-Jersey Breeders Annual Meeting

Written for California Cultivator by R. P. Royce

THE annual meeting of the Southern California Duroc-Jersey Breeders' Association was held Thursday evening, October 10, at the Reynolds Hotel, Riverside.

A dinner was served, during the course of which plans were discussed for more effective breed promotion work. The association has accomplished much good and deserves no little credit for the popularity of the red hog in Southern California, but the members do not intend to rest on their oars. Plans for closer co-operation with the State Swine Breeders' Association and the Western Duroc-Jersey Breeders' Association were put under way. The meeting disclosed one of the reasons why this association is forging ahead—there is the finest spirit of cooperation among the members. Petty jealousies are not tolerated and every member is trying to help the breed.

A number of important matters will come before the swine men of the state this winter and it will require organized effort on the part of the breeders and feeders if their interests are protected. A pure feed bill will be introduced before the legislature this winter and unless the swine organizations are "on their toes" it will be smothered in a committee. The Southern Duroc Association will actively support this bill.

The following officers were elected for the current year:

President, Dr. Michael Creamer, Los Angeles; vice president, R. B. Peters, Devore; secretary-treasurer, R. K. Walker, Bonita, San Diego County; directors: H. S. White, Chino; H. H. Braly, Newbury Park; W. B. Hewitt, Van Nuys; Donald Grahm, Lancaster.

The next meeting will be a joint meeting with the Western Duroc-Jersey Breeders' Association during the Liberty Fair at Los Angeles .

Rodent Control

By A. H. Call

With the establishment of the rodent control division of the office of the state commissioner of horticulture, one of the most serious drawbacks to the ground squirrel eradication work in the 58 counties of California was removed. Formerly much opposition was encountered when the county horticultural commissioner, officially in charge of ground squirrel eradication, contemplated clean-ups in portions of his county which, due to brushy and hilly character of its topography, existed in uncultivated state in more remote portions. The hue and cry always was raised that nothing could be done as the state and government lands adjoining were badly infested. In most cases such statements were untrue, but to preclude this possibility the state board of control approved an emergency appropriation of $40,000 in the spring of 1918, for the purpose of establishing a rodent control central office, with the state commission of horticulture, to have direct charge of squirrel eradication on state lands, and to assist the county horticultural commissioners. This office has established five control districts with a trained man in charge of each. By a cooperative agreement with the United States biological survey, which has charge of squirrel eradication on government lands and national forests in California, it has been possible to clean up state and government lands in conjunction with the rodent control divisions field crews. In return the United States biological survey crews are cleaning up state lands wherever their crews are operating. In this manner approximately 125,000 acres have been relieved of the ground squirrel pest by these federal and state agencies during the past summer.

Autoroi of Undesirables

Here is evidence of some of the strenuous work performed in Ventura County. Five hundred and fifteen squirrels gathered after one poisoning. Poison was put out in the morning and the harvest was the result of an hour and a half's work in the afternoon in a 200 acre field.

Guernseys

Continued from Page 383

Awards: Bull, two years old or over—1, May King of Fernridge, Grandview Dairy; 2, Cora's Glen, Hollow-Hill Farm. Bull, senior yearling—1, Effie's King of Hollow-Hill Farm, Hollow-Hill Farm. Ayrshires

E. B. McFarland, San Mateo, was the only exhibitor of Ayrshires.

Duroc-Jerseys

The feature of the swine show was the large exhibit of Duroc-Jerseys, and the feature of the Duroc-Jersey exhibit was the splendid fitting and exceptional size of the young stuff. Several of the exhibitors were making their first show, but their entries would have been a credit to old showmen. The older classes were not always well filled, but several outstanding animals were driven out. The champion sow, Model Defender Lady, would not be out of place in any show. She is a sow of extreme size, yet has quality "to burn," and possesses that sweet feminine quality the breeder looks for in a real brood sow. The aged boar, Cherry Volunteer 2d, shown by Dr. Creamer, made a very satisfactory champion, though the junior pig of Thorp's gave him a run for the purple.

The junior pig classes were particularly interesting on account of the Futurity in which nearly all were entered. W. B. and E. W. Hewitt were first and second on boar pigs. Creamer won the sow pig division and also the litter. In the open classes, Thorp's boar and sow pigs were too much for the local entries.

Exhibitors were: W. M. Taylor, San Bernardino; Dr. Michael Creamer, Los Angeles and Owensmouth; Windsor Ranch & Peters, Lamson & Walker, Bonita, San Diego County; Pendergast Ranch, San Bernardino; Falfadale Farm Perris; Golden Model Stock Farm, Van Nuys; J. E. Thorp, Modesto; H. S. White, Chino; George Junior Republic, Chino.

Aged boars — 1, Creamer; 2, White; 3, Falfadale Farm. Boar, senior yearling— 1, Thorp. Boar, junior yearling— 1 and 2, Creamer. Senior boar pig— 1 and 3, Falfadale Farm; 2, George Junior Republic. Junior boar pig— 1, Thorp; 2 and 3, Hewitt. Senior and grand champion boar—Cherry Volunteer 2nd, Creamer. Junior champion boar—Thorp. Aged sow—1 and 2, Windsor Ranch & Peters, Lamson & Walker; 3, Thorp. Senior yearling sow—1, 2 and 3, Falfadale Farms. Junior yearling sow— 1, Windsor Ranch & Peters Lamson & Walker; 2 and 3, Thorp. Senior sow pig— 1 and 2, Falfadale Farm; 2, Windsor Ranch & Peters, Lamson & Walker. Junior sow pig— 1, Thorp; 2, Creamer; 3, White. Senior and grand champion sow— Model Defender Lady, Windsor Ranch & Peters, Lamson & Walker, Junior champion sow—Thorp. Aged herd— 1, Falfadale Farm. Young herd— 1, Thorp; 2, Falfadale Farm. Poland-Chinas

The Poland-China show was a trifle out of balance. By the time the Hartsook and the Marsh entries cashed in there was little left for the local herds. However, the losers can console themselves with the knowledge that they were shut off by some of the best hogs seen on the California circuit in a number of years. The Hartsook aged boar, I. B. A. Wonder, was easily champion boar. This boar is really remarkable in that in spite of him being five years old he sports his great size with the ease of a pig—and is a lot better on his feet than the majority of youngsters. The second prize aged boar shown by Christensen is very smooth and mellow, and attractive, when viewed from the side, but lacks somewhat in spring of rib and is none too strong on his pasterns.

The five aged sows, all owned by Hartsook, are a show in themselves. The writer does not recall having seen five as good sows shown by one owner. The Sacramento champion Big Knox Girl, added another championship to her long string.

Exhibitors were: Fred Hartsook, Lankershim; H. I. Marsh, Modesto; Poland-China Ranch, San Bernardino; I. F. Davis, Redlands; H. Christensen, Riverside.

Awards: Aged boar— 1, Hartsook; 2, Christensen. Boar, senior yearling— 1, Poland-China Ranch. Senior boar pig— 1 and 2, Marsh; 3 Hartsook. Junior boar pig— 1 and 2, Marsh; 3, Christensen. Senior and champion boar—I. B. A. Wonder, Hartsook. Junior champion boar Marsh. Aged sow— 1, 2 and 3, Hartsook. Sow, senior yearling, 1 and 2, Hartsook. Sow, junior yearling— 1, Marsh; 2, Davis. Senior sow pig— 1, 2 and 3, Hartsook. Junior sow pig— 1 and 2, Hartsook; 3, Christensen. Senior and grand champion sow, Big Knox Girl, Hartsook. Junior champion sow, Hartsook. Aged herd— 1, Hartsook. Young herd— 1, Marsh; 2, Hartsook; C, Christensen. Herd, under one year, bred by exhibitor— 1, Marsh; 2, Christensen. Get of sire— 1, Marsh; 2, Christensen; 3, Davis. Produce of dam — 1, Christensen; 2, Poland-China Ranch; 3, Marsh.

Berkshires

F. L. Hall, Perris, had everything his own way in the Berkshire classes, winning every first and all championships. The Fontana Ranch also competed.

Hampshires

The Llano Vista Ranch, Perris, had entries in all Hampshire classes and practically swept the platter clean, losing only the junior yearling boar class. This class was won by the Fairbanks Estate, Redlands.

Milk Goats

After completing the task of judging the goat show, the judge declared that he had never seen a finer collection of Toggenburg goats. He stated that while there had been a few goat shows held in this country, it was the first time such a feature had been offered by an agricultural fair. One hundred Toggenburgs, Saanens and Anglo-Nubians were on exhibit.

For the first time a class was provided for American Toggenburgs. A goat carrying 31-32 imported Toggenburg blood is eligible to the show in this class.

Sheep

John E. Marble, Redlands, exhibited Dorsets and Geo. W. Thomas, Arlington, exhibited a few Shropshires.

Boys' Pig Club Contest

During the past year the Farm Bureau of Riverside County has been active in organizing boys' and girls' pig clubs, and in order to encourage the clubs special classes were provided at the Southern California Fair. The awards were: 1, Charles Grahm, Owensmouth; 2, Harold Taylor, San Bernardino; 3, Albion Hendricks, Perris; 4, Howard Henrichs, Perris; 5, Rupert Hendricks, Perris; 6, Fred Cutter, Chino.

THE BEST LINIMENT
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
Caustic Balsam
IT HAS NO EQUAL

For the Human Body — It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Boils, Corns and Bunions. CAUSTIC BALSAM has no equal as a Liniment.

Complete
Dispersal Sale

Absolutely Nothing Reserved

We have 40 cows and heifers, heavy springers, or will be fresh at sale time, THESE ARE REAL PRODUCERS—THE NICE straight individual Kind. Eighteen daughters are from very choice dams and the 38 pound sire which we formerly owned. There are ten A. R. O. cows from 24 pound two year olds up to 28.170 pound cow. Eight choice heifers from A. R. O. dams. Daughters of King Model, King of the Pontiacs, and It. A son of King of the Pontiacs from 30.16 pound daughter of Tidy Abbekirk Prince, who has 84 A. R. O. daughters. King Pontiac Bettina No. 204947 is as nice an individual as you often see.

A son of King Korndyke Sadie Vale, whose two dams average 34.56 pounds in seven days and whose five dams in direct pedigree average 33.514 pounds, these bulls are under two years of age and ready for heavy service and very desirable. One son of Rag Apple Korndyke 8th, from an especially fine dam.

Remember he is half brother to the $53,200 bull. A bunch of young heifers and some good young bulls. In all about 85 head. Tuberculin tested by state authorized veternarian. With a 60 day retest privilege given.

If we can't please you we don't want your money. We want our cattle to be as valuable to you as your money is agreeable to us. Only one old cow, 26 pound, which has a 30.27, and a 24 pound two year old daughter, and two proven sons, the two year old yearling, and weanling, will be in this sale.

Remember the day and date

October 29, 1918

and govern yourself accordingly. Sale will be positive.

Brookdale Stock Farm, consisting of 200 acres well equipped and one of the best in Central Illinois, is for sale.

Also one set of Holstein-Friesian Herd books, complete with exception of Vol 7. There are 48 volumes and eight blue books.

Ranch Adjoins Town

California International

California International Livestock Show scheduled to be held in San Francisco November 2-10. A large amphitheater is now being constructed at 12th and Market Streets. It will have a seating capacity of 2500 and horse show and pure bred stock parades will be featured every day of the show.

Joseph E. Painter, general manager of the livestock show, announces the closing of the entries and declares that there will be an unusual showing of Herefords and Shorthorns; the quality and quantity of which are representative of the enterprise of the Western breeders.

The building of the exposition is under the direction of Edward H. Brown, general manager of the Home Industry League, who is assistant to the president, Edgar J. DePue of the California International Livestock Show. The Home Industry League generously loaned Mr. Brown's services to Mr. DePue for the period of the expositlon.

Under the auspices of the San Francisco Poultry Association and of the Pacific Coast Rabbit and Cavy Breeders' Association, poultry and rabbits will form an attractive feature of the livestock show. The Hopland Stock Farm of Hopland, California, has entered a representative herd of registered Shorthorns, while the Hereford Corporation of Cheyenne, Wyoming, owners of the largest registered herd of Herefords in the world, are sending a carload of their cattle. John Painter & Sons of Colorado are also shipping their famous Herefords, among them being several champions.

The executive board, of which W. T. Sesnon is chairman, includes Edgar J. DePue, M. H. Esberg, R. B. Hale, C. K. McIntosh, Vanderlyn Stow and F. L. Washburn.

The advisory committee is composed of Ralph P. Merritt, Food Administrator; Dean Thomas Forsyth Hunt, University of California; Fred J. Koster, president San Francisco Chamber of Commerce; C. C. Moore, chairman of state council of defense, and Dr. Ray Lyman Wilbur, president of Stanford University.

The board of directors also includes William H. Crocker, Maurice A. Hall, Frank Honeywell, Fred W. Kiesel, John D. McKee, William Mayo Newhall, Fred M. Pickering, Warren R. Porter, B. F. Schlessinger, T. H. Ramsey and Gordon H. True.

Helps Attack on Animal Tuberculosis

The 1919 agricultural appropriation bill just passed by congress contains an item expected to be of great importance in the federal and state campaign to eradicate tuberculosis among cattle and swine.. It provides that the federal government shall pay indemnity to owners whose cattle are slaughtered because they have been found infected with tuberculosis.

The department of agriculture is to pay one-third of the difference between the appraised value of the cattle and the salvage value of the slaughtered animals, provided that the state, county or municipality in which the cattle are owned and kept is cooperating in the tuberculosis work and pays at least an equal amount to the owner. In no case is the federal government to pay more to the owner than is paid by the state, county or municipality. No payment by the federal government is to be more than $25 for any grade animal or more than $50 for any pure bred animal, and no payment is to be made unless the owner has complied with all quarantine regulations.

This provision is expected to remove much of the opposition among cattle owners that has hindered tuberculosis eradication work. Through it the federal government, the state, county or municipal governments and the owners of cattle will share in the loss resulting from slaughtering infected animals for the protection of other animals not infected.

Accrediting Rules Adopted

Another important development expected to hasten tuberculosis eradication was the unanimous adoption by breeders and live stock sanitarians of national reputation of regulations for accrediting pure bred herds of cattle. This action, taken last December, marked the coordination of efforts of individuals and the state and federal governments for the suppression of tuberculosis in pure bred animals.

On July 1, the department issued its first list of herds officially accredited as free from tuberculosis. The herds numbered on that date approximately 240. The list also named herds that had passed one successful test. They must pass another annual test successfully before being placed on the accredited list.

Annual Loss Is Big

The annual loss from tuberculosis among cattle and hogs is reckoned at $40,000,000 in the United States. The federal campaign to eradicate the disease is of comparatively recent beginning. It has been divided into three well defined projects. The first project is the eradication of tuberculosis from individual herds of pure bred cattle; the second is the eradication of cattle tuberculosis from circumscribed areas; the third is the eradication of tuberculosis among swine.

It is estimated by officials in close touch with available records that 15 per cent of pure bred cattle in this country are affected with tuberculosis. In grade cattle and swine the percentage of infection is gradually increasing, as shown by post mortem records in establishments where meat inspection is maintained. Infected animals are not only dangerous to other animals but may transmit the disease to mankind through milk and flesh.

Foot and Mouth Disease

Public officials, veterinarians and stock owners should be on guard to report immediately any cases of foot and mouth disease that may appear in this country, according to a statement by Dr. J. R. Mohler, chief of the bureau of animal industry, United States department of agriculture. Dr. Mohler said:

"Recent cable news announces an outbreak of foot and mouth disease in England which brings to mind the serious outbreaks of that disease which have been expericnced in the United States.

"Foot and mouth disease has appeared in England from time to time, as it has done in the United States. In

both countries the past outbreaks have been promptly controlled and eradicated and no cases have occurred in the United States since 1916. Nevertheless the disease makes its appearance at irregular intervals. In this country we may expect its return at any time although every precaution is being taken by the federal authorities to prevent the introduction of the disease, especially from the present outbreak in England. So long as communication is maintained with other countries the danger of the reintroduction of the disease must be acknowledged.

"It is of the greatest importance that a sharp watch be maintained by all officials, by practicing veterinarians, and by stock owners in order that the very first cases may be discovered and the spread of the disease prevented. It would be a great misfortune to the United States if foot and mouth disease should occur under present conditions or become firmly established in the country, as has been the case in many of the stock raising nations of Continental Europe. Early discovery of the disease, followed by prompt elimination of infected centers, is the only way to prevent the United States from becoming permanently infected."

MOVE HEADQUARTERS

The California Alfalfa Growers Association, which has operated for the past two years with its principal place of business at Riverside, has now moved to the Central Building, Los Angeles. The board of directors decided upon making this move in order to better serve the members of the association who are located not only in Riverside County, but also in the Antelope Valley and other contiguous territory which is nearer Los Angeles than Riverside. The association feels that it will be in a better position to serve its customers from its Los Angeles offices than formerly.

The association is a non-profit organization of alfalfa growers located in any part of the state of California, selling hay to car lot buyers at the market price, and performing this function at exact cost to its members. The association will be pleased to interview any alfalfa growers in the state of California at its offices, whether or not at present a member of the association.

The State Grange is in session at Ukiah this week, Tuesday to Friday. The usual annual business is being transacted and addresses by some of the best informed members of the California Grange will be made. The officers for the past year are:

Master, F. L. Hunt; overseer, Roy I. Church; lecturer, Dr. E. C. Abbott; steward, Lee Dudgeon; assistant steward, A. C. Williams; chaplain, Rev. Robert G. Harbutt; treasurer, Michael Farrell; secretary, Martha L. Gamble; gate keeper, Robert Schols; Ceres, Mrs. Lulu C. Eippers; Pomona, Mrs. Mary L. Church; Flora, Mrs. Ella Brangler; lady assistant steward, Miss Mamie Sanford; pianist, Mrs. Alice Winans; executive committee, Thomas Jacob, Geo. R. Harrison, A. Van Maren.

Elliott-Brant Rancho Guernseys
We have an especially fine bunch of young Guernsey bull calves to choose a future herd sire from. Guernsey bulls cross well with all breeds of cattle and they increase the quality and color of the milk as well as the quantity of milk and butter fat. The Guernsey bull has won the battle with the scrub cow.
We have calves from A. R. cows with different sized records up to 750 pounds of butter fat. Our prices are reasonable and are based on breeding and records. Write and tell us your needs and we will tell you how we can fill them.

A STAB IN THE BACK

Initiative Amendment No. 21 proposes to admit dentists from any other State without examination.

35 out of 42 of Our Boys, this year's graduates in dentistry of the University of California, have entered the Army and Navy. When these boys come back, if they do come back—from the fight for freedom — they would have to compete with derelicts and incompetents let in without examination. Why favor the incompetent or derelict slacker?

No. 21

Joint Committee, Cal. Dental Associations

RIVERSIDE COUNTY COW TESTING ASSOCIATION

One of the most instructive exhibits at the Southern California Fair, Riverside, was that made by the Riverside County Farm Bureau Cow Testing Association.

The association has just completed its first year and will soon have complete records on 900 cows.

For the exhibit, three cows, all from one herd, were selected; two were purebred Jerseys and one a grade Jersey. One had every indication of being a superior dairy cow. One was a very inferior animal. The third cow was rather average in appearance.

The records of the three make plain how impossible it is to select the profitable cow on appearance.

The best individual made a loss of $43.34. The inferior cow registered a profit of only $2.43. The average appearing cow made a net profit of $172.26.

CITRUS BELT MILK GOAT ASSOCIATION OF SOUTHERN CALIFORNIA

During the fair at Riverside the Citrus Belt Milk Goat Association held a special meeting for the purpose of interesting the people of Riverside County in the milk goat industry. The meeting developed considerable interest and resulted in adding a number of new names to the growing list of members. Judge L. A. Bridinger addressed the meeting and congratulated the members on the remarkable showing made at the fair.

Book Review

"HOME AND COMMUNITY HYGIENE"

"Home and Community Hygiene," a text book of personal and public health, by Jean Broadhurst, Ph. D., assistant professor of biology, Teachers' College Columbia University, and published by J. B. Lippincott, Philidelphia, at $2.00 net.

It has often been regarded, and too often shown to be true, that our larger cities are proving more healthful than some of the alleged health resorts at mountain or at seaside. This because of the feeling that nature is sufficient to overcome the carelessness of human beings, without providing proper sanitation. This text book, which is intended to aid all communities and to provide more healthful living conditions, has just been issued by the Lippincotts in their Home Manual Series. It is so planned that any one reading first the two introductory chapters (I and II) may read the remaining chapters in any preferred sequence. Household economics students as well as housekeepers may prefer to begin with Chapter XIII, The Home, passing at any desired point to related chapters. For example, interest in food may suggest next the chapter on food, or on milk; household pets may lead to the chapter on transfer of disease or cleaning methods to the chapter on disinfection. A perusal of the book will convince the people of every home and of every community of the necessity for hygenic care of their surroundings. Some portions of the book are technical but so informing that it will be read with interest. There are 26 chapters, the first two as noted above being of a general nature and others touching upon Food, Milk, Water, Air, Sewage, Disinfection and Quarantine, The Home, Summer Camps, Schools, Infant Welfare, Tuberculosis, Vital Statistics, and many other topics, including a very valuable glossary and appendix.

You can fatten a hog without cost

on what your hogs waste, for it's wasted grain that eats hog profits. With a Calco Automatic Grain Feeder the hogs eat as much and as often as they like. But they can't waste grain. It slides down into the circular trough only as fast as consumed. It can't be rooted out.

Calco Automatic Grain Feeder

will pay for itself in a few months through grain saved. It is a permanent investment. Made of "Armco" rust-resisting galvanized iron with a cast iron base. Extremely durable, sanitary; can't be upset. The high cost of grain feed demands feeding economy—Calco Automatic Feeder is the answer.

Try one out—write today for literature and price list.

Start Your Moulted Hens to Laying

THE world is calling for more poultry and more eggs. Everybody must speed up—it's a patriotic duty. Now's the time to get ready for regular fall and winter laying.

DR. HESS POULTRY PAN-A-CE-A

Will start your pullets and moulted hens to laying promptly

Remember, going through the moult is like going through a long spell of sickness. The egg organs become dormant, but why let nature bide its own time to revive the egg organs? Feed a tonic.

Dr. Hess Poultry Pan-a-ce-a contains *Nux Vomica* and *Quassia*—tonics that promote digestion, that tone up the dormant egg organs. It has *Iron* for the blood, and *internal antiseptics*. This combination will keep your whole flock healthy and start your pullets and moulted hens to laying.

IMPORTANT: If your hens are not yet over the moult, supply them with Pan-a-ce-a daily to give them strength and vitality to force out the old quills and grow new feathers. Always buy Pan-a-ce-a according to the size of your flock—a penny's worth for each hen to start with. There is a package for all sizes of flocks.

You have no chances to take. The dealer in your town who sells Pan-a-ce-a will refund your money if it does not do as we claim. 30c, 60c and $1.25 packages. 25-lb. pail, $3.50; 100-lb. drum, $12.00.

A Size for Every Engine and Motor

Piston rings prevent escape of gas and power. They must fit exactly or there is compression leakage, excessive carbon, and power loss. The scientific construction of

McQUAY-NORRIS LEAK-PROOF PISTON RINGS

assures equal pressure all around the cylinder walls. They are made in all sizes to fit every model and type of engine, automobile, tractor, etc.—every size accurately gauged to fit the particular model of motor.

Your local dealer or garage has — or can get — our data book of piston ring sizes of practically every engine and motor made. This will tell exactly what rings you need. Complete size assortments are carried by more than 300 jobbing and supply houses all over the country from which you can be quickly supplied. Over 2,000 unusual sizes and oversizes — all widths and diameters — are kept constantly on hand at the factory ready for prompt shipment anywhere.

McQUAY-NORRIS Superoyl RINGS

A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

Rooster or Capon, Which?

Written for California Cultivator by Jean A. Koethen

(Continued from last week.)

The age and size for caponizing cockerels varies in different breeds. A Rock should be caponized when it weighs from 1½ to 2½ pounds. A Light Brahma can be successfully caponized up to the time it reaches 4 pounds. In general, the operation should be performed just before the bird begins to crow and the comb and wattle develop and redden. This, in most birds, is from 10 to 12 weeks of age. The birds that are to be caponized should be shut up and kept without food for 36 hours before the operation. Mr. Beuoy gives no water during the 36 hours, claiming that water will cause bleeding after the operation, but other experts allow the bird to drink. All agree, however, that there must be no eating for 36 hours. The following minute directions for caponizing are taken from an article by Henry D. Smith of Rockland, Massachusetts, in the American Poultry Journal:

The operation of caponizing is very simple if one has the proper tools, table, etc. After caponizing a few dozen birds, one can caponize a bird per minute and keep it up, and it can be done in 30 seconds, which shows that it is not a difficult operation. Some use a barrel for an operating table, but this is not as good as a board about 10 inches wide by 20 inches long. Fasten the board at the center on a piece of 2x3 inch joist cut off slanting, so that with one end of the board toward the operator, the left hand side will be about five inches higher than the right hand side. With a wire and a hook to hold the wings, which are held together up over the back, and a weight about like one-half of a brick fastened to a cord two feet long with a small hook on the other end so as to take a turn about both legs, you will then have the bird lying on his left side, with the head from you, the wings fastened by the hook and the legs drawn out straight by means of the weight. The tools are a knife, a wire five inches long with a sharp hook on one end, a spreader and the forceps, a set known as the "Farmer Miles." There is also a set on the market with a few small improvements.

To begin to operate: With the fore finger of the left hand, press and pull the skin back until the finger nail slips over the last rib just forward of the leg. At the same time be pulling off a few feathers with right hand just over the last two ribs, so they will not be in the way for a good clean cut. Now, holding the skin tight as described above take the knife in the right hand and cut, preferably all in one cut or stroke of the knife, the whole length between the two last ribs, from where they are joined together at the top down to where they are joined at the bottom, but do not cut any bone off. This incision should be from one-fourth to three-eighths of an inch deep. Then with the handles of the spreader to the left insert them in the cut, catching the hooks on to each rib so as to spread them apart just a little but not enough to break the ribs. If the incision has been properly made a very thin membrane, called the peritoneum, will be in sight, and with the wire hook begin at the top of the incision and tear a hole the full length, being careful not to rupture the intestines which are just on the inside of the peritoneum. To remove the testicles take the forceps in the right hand with the thumb and finger inserted in the rings the same as in using a pair of scissors, and with the solid flat plate down, force the intestines down when the upper testicle will be in plain sight. But be sure and take the lower testicle first, which is not in sight as a usual thing, but can readily be found as it lies just the other side of the back bone and directly opposite to the top one. Push the forceps in beyond the lower testicle, which is not over one-half inch from the top one, open the forceps enough to take in the testicle and with an upward pressure sort of scrape the back bone in such a way as to drag the testicle out in sight. When it slips off of the wire part of the forceps, catch it on the lower solid side and then shut the forceps together taking in the testicle. Now pull back a little so as to be sure that you have caught no other organ, and with a twisting motion to bring the thin membrane that encloses the testicle into a string instead of a bag, and at the same time pulling it out, keeping a sufficient pressure on the forceps to maintain the hold on the testicle. Now go back after the top one, which can easily be gotten hold of, twist it as before and pull it out. In taking hold of the testicles be very careful not to get hold of a main artery which lies right between the two testicles, for if the artery is ruptured there is no hope for the chick. Pick it at once and treat yourself to a broiler.

If the first incision should not be high enough and turning the knife you cut up toward the back bone, be careful not to hold the knife in such a way that the point cuts away up ahead, for in this way you may cut another organ that will cause a lot of blood to flow and bother you, though it may not prove fatal to the bird. Hold the edge of the knife straight up and down. After removing the spreaders and releasing the bird, the object in pulling the skin away back before making the incision will be seen, for

Eggs all through the MOULT!
SHORTEN the moult and lengthen the laying. Globe A-1 Mash (dry buttermilk added) will do it. The live lactic acid bacilli in the dry buttermilk will keep your flock in glowing health: (bulletin 162 U. S. Agr. Exp. Sta., Berkeley).

CHICKENS SICK? Roup, Cold, Canker, Bowel Complaint, Limberneck, Sorehead, etc. the best remedy is always GERMOZONE. At most dealers or 75c. postpaid with 5 book poultry library free.
GEO. H. LEE CO., Dept. 418 Omaha, Neb.

when the hird takes his natural position, the hole through the skin will go forward so that the hole through the flesh will he covered. Birds which have been caponized will remain rather inactive for a few days and some of them may puff up with wind under the skin, but this will pass off as a rule in a day or so. If, however, any seem greatly distressed, make a little slit low down on the leg, so that if there is any pus in it, it will run out and the wind may all be pressed out very easily.

When the operation is finished, place the bird in a clean coop and give water and a little soft food. When the wound is healed, the real fattening process may be begun. This consists of feeding soft mashes, and as much milk as possible.

In the South Shore roaster colony below Boston, where more money is made with market poultry than anywhere else in the country, a cross of Barred or White Plymouth Rock on Light Brahma is the favorite cross for capons. The chicks are hatched in August or September and are sold in middle or late spring when they weigh from seven to fourteen pounds. In other places they are usually hatched in the spring and marketed the following February.

NATIONAL EGG LAYING CONTEST

(September Report National Egg Laying Contest at Mountain Grove, Missouri.)

By T. W. Noland, Director

THE hens all made a good average for the month, the total number being only 62 eggs less than last month's record, with only 30 days in the month. Many of the hens have passed the 200 mark, some having completed the moult and back on the job again, while others have not yet moulted and probably will not before the close of the contest.

The Contest

Pen 27, Anconas, from Missouri, wins the cup for September with a record of 107 eggs. The total number of eggs laid in September was 3,706, or an average of 12.35 per hen.

Following are the leading pens for each breed:

Anconas, Missouri, 107 eggs; Buff Wyandottes, Missouri, 102; Silver Wyandottes, Iowa, 101; Barred Rocks, Missouri, 100; S. C. White Leghorns, Missouri, 93; White Wyandottes, Missouri, 90; White Plymouth Rocks, Idaho. 87; Black Orpingtons, Missouri, 82; S. C. Reds, Missouri, 81; R. I. Whites, New Jersey, 81; R. I. Whites, Michigan, 81; R. C. Reds, Missouri, 75; Buff Rocks, Missouri, 75; White Orpingtons, Missouri, 57; Buff Orpingtons, Missouri, 55; S. C. Brown Leghorns, Missouri, 45.

REQUISITIONING FOOD IN GERMANY

Through information secured by the United States food administration, it is now possible to describe with reasonable accuracy the extent to which German farmers, and those in other countries, are maintaining production and their attitude toward government regulations.

There is abundant evidence of rigid official supervision which to the American mind would seem intolerable. For instance, the Bavarian state office has adopted severe measures to maintain the milk supply even to the extent of taking farmers' churns and butter casks from them to prevent butter making on farms. As a result, milk deliveries in some districts have increased tenfold and are now practically as large as in peace times, though of course at the expense of butter production.

Accustomed to Requisitioning

Naturally this was not accomplished without some friction, but considering the great number of food regulations affecting producers, of which this instance is typical, opposition has been surprisingly small.

Little Evidence of Hoarding

This system has sometimes resulted, as for instance in Russia, in peasants withholding and hiding for their own use large quantities of their produce. But among the central powers the farmers to a large degree have come forward willingly and have given up their produce without hesitation. In one district in Bulgaria, following an extensive campaign in which food needs were pointed out, as much as 440,000 pounds of wheat and 44,000 pounds of corn were received in one day as voluntary contributions. The population as a whole has given its surplus stocks willingly and the requisition system has had most satisfactory results. Requisitioning thus amounts to a system of comprehensive purchasing to meet government needs, rather than an indication of hoarding or resistance by farmers to their government.

NIETZCHE'S VIEW OF CHRISTIANITY

Frederich Wilheim Nietzche was one of the most noted of modern German philosophers. How much has his philosophy affected the views and character of the Germans of today? Is not the answer written in the blood of the women and children, the old men of occupied France and Belgium? Are not the Lusitania victims witnesses to German adoption of Nietzche's faith?

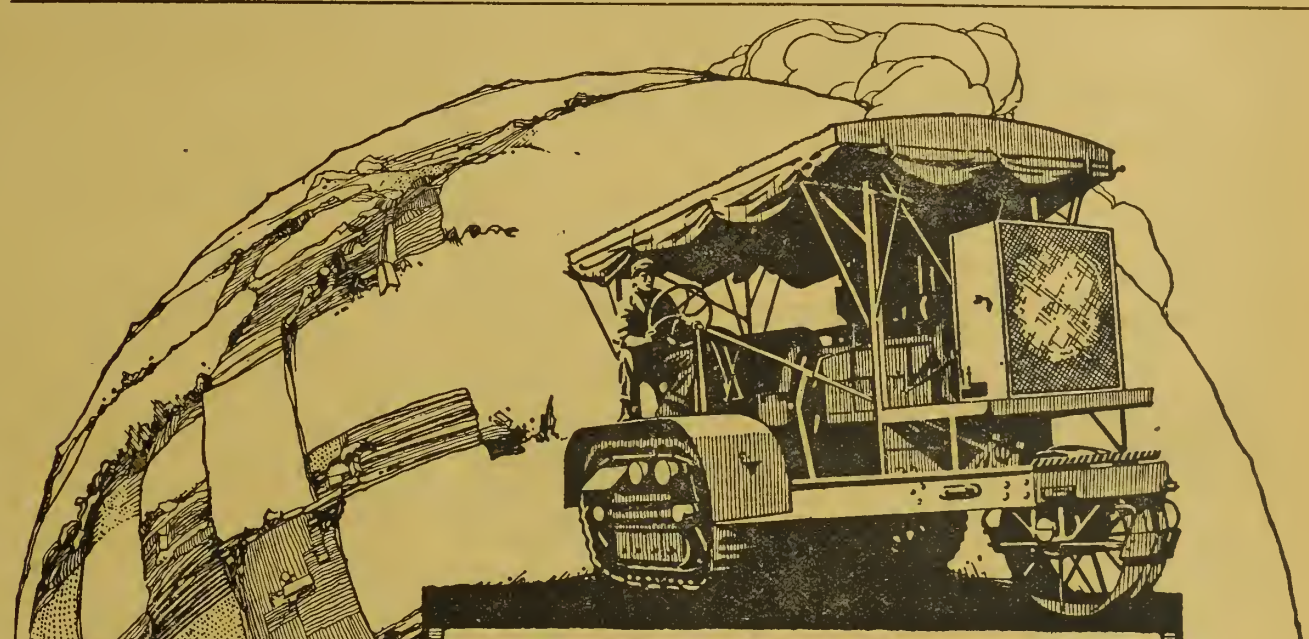
Here is his indictment of Christianity:

"With this I conclude, and pronounce my sentence: I condemn Christianity. To me it is the greatest of all imaginable corruptions. The church is the great parasite; with its anemic idea of holiness it drains life of all its strength, its love, and its hope. The other world is the motive for the denial of every reality. I call Christianity the one great curse, the one great intrinsic depravity, the one great instinct of revenge, for which no expedient is sufficiently poisonous, secret, underhand, to gain its ends. I call it the one immortal shame and blemish upon the human race."

ENTOMOLOGISTS IN "COOTIE" FIGHT

Scientists of the Bureau of Entomology, United States Department of Agriculture, are conducting extensive work designed to find a preventive or exterminator for body lice, the "cooties" of the war zone. They are working to add to the knowledge of how to repel, kill, or drive away the tiny parasite on which world-wide attention was centered by the war. The scientists, in addition to watching "cooties" as they pass through the stages of their existence, are testing chemicals to learn their destructive action on lice, their effect on human bodies, and their penetration of clothing. Also, they are cooperating with army officers in testing laundering and delousing processes.

"Some folks run the milk of human kindness through a cream separator before they hand it out."—Hoard's Dairyman.



INCREASED PRODUCTION

At this crucial time when food is the most urgent need of the entire world, the "Caterpillar" Tractor is rendering incalculable service in making possible increased production of farm products with a minimum of labor.

The efficiency of this tractor enables one man with a "Caterpillar" Tractor to do the work of several men and many horses, and do it better, quicker and at less expense. These economies of operation produce a corresponding increase in production.

Thirty-five years of Holt manufacturing experience and the high standards of Holt design, materials and construction, have given the "Caterpillar" Tractor world-wide supremacy. Thousands of farmers, freighters and contractors have profited by the "Caterpillar" Tractor's ability to reduce costs and increase profits. *You* can do the same. Write today for complete information.

A Good Piano Is Not Necessarily An Expensive One

Of course we feel that the finest piano is the **STEINWAY**, but the prices for Steinways, while thoroughly consistent with their high quality, are generally beyond the means of many homes.

For this very reason we have devoted much attention to a group of medium grade pianos—really famous makes—products of old established firms—pianos for which we have been the selling agents for years. In offering such pianos as **A. B. CHASE, KRAKAUER, ESTEY, KURTZMANN, EMERSON** and **STROUD**, we can heartily recommend them as ideal for the home or school. The prices of these pianos are within the reach of nearly everybody.

Then we carry the **ALDRICH at a lower price**—a good dependable piano which will give excellent service.

Then again we have on our floors at all times many "used" Pianos (good reliable makes) which we have taken in part payment for Steinways and Pianolas. These have gone through our shops and have been put in first-class condition—and carry our guarantee. We advise a customer to buy a good "used" piano rather than the cheap new ones offered by some dealers—the prices are the same but not the quality.

What ever your purpose or your need, we will serve you to our best ability so that the transaction will be to our mutual and lasting satisfaction. We gladly arrange convenient payment terms.

We invite you to call at any of our stores — or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.

Sheep Coughing

Please prescribe for sheep that are coughing and running at the nose.—Subscriber, Ager.

The coughing and running at the nose might be due to any one of several different causes and not knowing just what is wrong it may be best to prescribe a general tonic. Sheep often need something to arouse a healthy action of the liver and often of their own accord will ravenously eat something bitter, as dried boneset, if they can get it. Give the following that will be a laxative and liver tonic. Raw linseed oil, two parts; turpentine, two quarts; powdered nux vomica, two ounces, and aloin, four ounces. Mix thoroughly and give each sheep a tablespoon of the mixture. In a few days repeat the dose. The gallon will be enough for about 60 sheep, so you can govern the amount you get by the number of sheep you have. Keep the medicine well shaken while dividing the doses. You will be obliged to give it as a drench. They might eat it if sprinkled on some dry hay, but some would eat more than others and get more than they should have.

A Good Watch Dog

I have a fine collie dog that has been castrated. He is too playful and seems to have no pep. How can I make a good watch dog of him?—Subscriber, Corcoran.

There is only one way to make a good watch dog and that is to keep him tied up most of the time and do not play with him. He will soon become cross enough and watchful too. Build a kennel for him to sleep in and tie him to a stake just outside with a chain long enough to allow him plenty of freedom when inside. Use a strap for a collar that is not small enough to choke him nor large enough to slip over his head. If he is not full grown watch the collar to see that it does not get too tight. There should be a swivel in the chain so it will not get twisted and choke him. He must be turned loose for a short time once or twice a day for exercise. Or you might plant a post about eight feet high near the kennel and another 30 or 40 feet away and stretch a wire between them with a ring on it. Tie the dog's chain in the ring, then he can run back and forth between the posts. That will give him plenty of exercise and keep him in good health.

Lymphangitis

There seems to be something wrong with one of the hind legs of my horse. When he is tied up in the stable the leg swells from the first joint up to the second, and when he is worked or turned in pasture the swelling goes away and the leg becomes its natural size.—Subscriber, Vacaville.

The trouble is with the lymphatic vessels. They are not carrying off the waste material unless stimulated by exercise. This usually comes from overfeeding. Do not feed too much bulky feed and allow him to run out most of the time. Give him a tablespoon of nitrate of potash in the feed twice a day for a week; also get four ounces of the tincture of aconite and give half a teaspoon of it in the drinking water twice a day while it lasts. If given in the right amounts it will last about a month. If the swelling persists in returning then use the following lotion every night as a liniment and rub it in well. Make the lotion of one ounce of chloride of zinc to the gallon of water.

A TREMENDOUS EVENT

The famous 6000-acre Tagus Ranch in Tulare County is going to be made available to renters in tracts of 20 acres and up after December 15. The announcement has already created a sensation throughout the central part of the state, as this ranch is one of the greatest agricultural factors in the West. The property is owned by the Pacific States Corporation, Los Angeles, who are now receiving applications for leases on acreage in Tagus Ranch. The leases will be awarded only to responsible successful parties, and the special qualifications of each applicant will be carefully considered. The great breeding herds and equipment of Tagus Ranch will be disposed of through the medium of an auction sale, which will be by far the biggest event of its kind ever held west of Chicago. The sale will include 400 grade Angus and Shorthorn cows, 15 registered Angus bulls, 3 Shorthorn bulls, 200 registered Duroc-Jersey hogs, 90 registered Holstein cattle, 39 registered Percheron and Belgian stallions and mares, five 15-35 horsepower Sandusky tractors, 250 head high class brood mares and work stock, and over $50,000 worth of plows, harrows, wagons, hay equipment, cultivators, wagons, etc., including a large number of special bean and beet machinery and implements. The sale will be held on the Tagus Ranch December 10-11-12-13, and will be under the personal management of C. L. Hughes, Sacramento, with Col. Ben A. Rhoades, Los Angeles, as auctioneer.

FOURTH LIBERTY LOAN

What Is the Liberty Loan?

It's forts and it's ships and it's shining guns.
It's squadrons that sweep the sea.
It's all of the circling band of steel
That shall keep all the home shores free.
It's grub and it's warmth for the sailor lad
Far out on the wintry foam.
For the brave jack tar, as he fights afar,
It's the good old "Money from home."

What Is the Liberty Loan?

It's rifle and helm and it's bayonet,
It's shovel and shard and shell
For the soldier boy in the olive drab,
Out there on the edge of hell.
It's the roaring wings of the whirring planes
That battle on high alone.
For the lad who is daring "Over There"
It's the good old "Money from home."

What Is the Liberty Loan?

It's succor and life for a bleeding world.
It's the glimmer of Peace at dawn.
It's the strength of a mighty arm to strike.
It's the gleam of a great sword, drawn
But, more than all, it's the pledge of love
To the lads whom we call "Our own."
To the boys on land, afloat, on high,
It's the good old "Money from home."

—By Ralph E. McMillin.

CORPORAL HENRY JOHNSON'S STORY

By Himself

CORPORAL Henry Johnson himself, who is convalescing at a near-by base hospital, rather unexpectedly dropped in at the Field Headquarters of the Press Section here and very willingly gave a vivid and awesome story of the event. I am going to try to offer it to you as I heard it. Quite contrary to the well known newspaper phrase, "told his story blushing and stammering as a schoolgirl," Johnson gave a rapid and vivid story, inserting all gestures of the fray.

"Yessah, ma name's Johnson. Dis is Johnson, what's left of 'im.

"Yah must a read all about Johnson and Robinson, shue yau did, it was in all de papers.

"Dere's a silver plate right dere (pointing to his left foot), yessir, right dere, they pushed a baynet through ma laig an' shot me in de right arm. Day want to send me home but Ah ain't goin' home. Ah gonna stay here till may company goes home. I'm a good a man as any of 'em. Dose Germans can't fight.

"'Twas a cloudy an rainy night and me and ma pardner was at this here outpost. Bout two in da mornin' we sees a bunch a Germans comin' at us. Ah figured maself as good a man as any of em an Ah says to ma pardner, 'We's going to stick right here.' He says, 'I'm with yah to de end.' So stead of 'treating to lines we cut loose grenades and fired way all our ammunishion. Robinson was wounded in da laig at de start and fell to de ground still throwing de grenades at de Huns. Two of 'em tried to carry way ma pardner on a stretcher. Ah took ma rifle, a French gun, just like dis, and hit a Dude right on de haid and broke the rifle right here.

"Ah went after de Dudes carryin' way ma pardner. Ah reached for ma bowie (trench knife), and hit one feller right in de haid. I pulled it out and bout faced all round and give it to nudder in the guts.

"I took my pardner way from 'em and brought 'em back to de post. Den one of de Dudes comes at ma hollering 'Kumrad.' Kumrad, you say, I'm Kumrad all right. Ah'll show you Kumrad. Yessah. and den de Germans, what was lef of em, beat it. I bandaged ma pardner with mah first-aid kit.

"Den de lootenant comes runnin' in an says, 'Johnson, what's happened?'

"I says, 'It's all over, lootenant.'

"Ah had sixteen automatics and mo stuff piled in front of ma.

"I says, 'Go out dere an count dose Dudes.'

"The lootenant takes his pocket light an' looks over the ground and comes back.

"'For heaven's sake, Johnson, there's twenty-four of 'em!'

"'Yessah, and if dey hadn't a got ma pardner here, dey would a been a lot mo.

"The lootenant says, 'Johnson, are you hurt?'

"Ah says, 'No, sah.'

"'Yes, you is,' he says, 'look, youse all bloody.'

"Oh, I says, dat's from de Dudes.

"Yessah, I figured maself as good a man as any of dem and if dey hadn't got ma pardner we'd a cleaned up."

At this point one of the listeners inquired:

"Johnson, where are you from?"

"I'm from Albany, sah."

"I'm from Albany, too," was the reply.

"Yah ought to know me. I'm Henry Johnson, the boy who used to drive a horse for Hartman's on ——— street."

This ended the dramatic offering and Mr. Johnson was warmly congratulated by his attentive audience.

Daily as Corporal Johnson strolls the streets of the village on his convalescent limp he is stopped by both French and Americans who congratulate him and inquire as to his heroic deed. He is becoming a popular character about the place and many await the appearance of his partner, Robinson, to see the pair which scored such an extraordinary win against heavy German odds.—Hutchinson News.

IT ALWAYS WORKS

She was a dear old soul, and for a long time she stood in pouring rain watching Private Murphy on sentry duty. At last she approached him and, in a voice full of sympathy, said:

"My poor man, how do you manage to keep dry in this awful wet weather? Don't they give you an umbrella to keep the rain off?"

Private Murphy looked her up and down for a moment, then replied: "No, mum, they don't. Shure, Oi just ate a salt herrin' in the mornin' before Oi come out, an' that keeps me dry all day."

HISTORY MEDLEY

Reviewing some examination papers which she had received from a class in American history the other day, a teacher in one of the Philadelphia public schools was surprised to read the following answer to the question, "What was the Magna Charta?"

"Magna Charta," the pupil wrote, "was the wife of a soldier in the Revolutionary War. Her husband got shot one day, and Mrs. Charta picked up his cannon, saying, 'Shoot if you must this old gray head, but I'm going to fight it out on this line if it takes all summer!'"

Be a pioneer and store home-grown food as if no freight trains were running or grocery stores open.

This international food sharing is just looking after "my folks," "your folks" and "our folks."

"If U fast U beat U boats;
If U feast U boats beat U."
—English Placard.

The past can never be undone. The food you should have conserved will never reach a hungry mouth.

Great Majestic

"The Range with a Reputation"

The Nation's needs come first

The U. S. Government must have metal for *ships,* munitions, guns. Help win the war by helping to

save iron and steel—don't buy a new range

now unless you must. Put the old range in good repair, and get along with it another year. If you can't, then buy a Majestic—the range that saves fuel because it is heat-tight, saves food because it bakes right, saves repairs because it is built of *unbreakable malleable iron and rust-resisting charcoal iron.*

Sold by leading dealers in every County of 42 States.

Majestic Mfg. Co., Dept. 203 St. Louis, Mo.

Caution: If your Majestic needs new parts, get them from a Majestic dealer, and insist on genuine Majestic materials—not light, inferior parts made by scalpers.

PERFECTION OIL HEATER

Food

SWEET POTATO FLOUR

Sweet potato flour, made in the home by using an ordinary coffee grinder or a meat grinder, offers one practical way to save sweet potatoes from spoiling, according to food specialists of the United States department of agriculture. A quart of dried potatoes will make a cup of the flour, or meal, which is useful in making certain hot breads, cakes and puddings.

To make the flour the potatoes should be cut into small lengthwise pieces and thoroughly dried either in a drier that fits on the top of an oven or warming closet or spread on racks in a current of air from an electric fan. The thoroughly dried potatoes are passed once or twice through a coffee grinder or the nut knife of a food chopper and the product sifted. The flour looks much like fine corn meal, and keeps for some time in a tight container.

In a stove drier potatoes have been dried out satisfactorily in one and one-half days, the drier being over a gas stove used at intervals during the day and unlighted at night. In a warming oven potatoes dry in about two and one-half days, but are of darker color.

How to Use the Flour

In cake or bread making the sweet potato flour may take the place of one-half of the flour usually used. In cakes sugar can be reduced a little. As a thickening agent it has the same power as cornstarch.

The recipes which follow have been tested by specialists of the United States department of agriculture and found to be excellent.

Sweet Potato Flour Waffles

One cup sweet potato flour, one cup white flour, 1½ teaspoons salt, 1¾ cups milk, one egg, one tablespoon melted shortening, four teaspoons baking powder.

Separate the egg. Beat the yolk and add the milk, melted shortening and dry ingredients. Then fold in the egg white beaten very light. Bake on hot, well-greased waffle irons until golden brown. Serve at once with butter and syrup. This will fill a waffle iron (for four waffles) six times.

Baking Powder Biscuits

One-half cup sweet potato flour, one-half cup white flour, two teaspoons baking powder, one-half teaspoon salt, two tablespoons shortening, one-half cup milk.

Sift the first four ingredients, rub in shortening with tips of fingers. Make a well in center and mix in slowly the liquid until a soft dough is formed. Toss on a floured board and roll to the thickness of one-half an inch. Cut and bake in a quick oven 20 or 25 minutes.

Cookies

One-third cup shortening, three-fourths cup sugar, one-fourth cup milk, 1½ cups white flour, one-half cup sweet potato meal, two teaspoons baking powder, one-half teaspoon salt, one egg, one-half teaspoon vanilla.

Cream shortening, add sugar and cream into the shortening. Add beaten egg, then the milk, and lastly the dry ingredients. Roll, cut and bake. For drop cookies use equal parts of sweet potato meal and white flour, making one cup of each.

One Egg Cakes

One-fourth cup shortening, one-half cup sugar, one egg, three-fourths cup milk, three-fourths cup white flour, three-fourths cup sweet potato flour, one-fourth teaspoon salt, three teaspoons baking powder.

Cream shortening, add sugar and well-beaten egg. Mix and sift flour and baking powder and add alternately to first mixture with the milk. Bake in greased muffin tins 30 minutes. Makes ten cakes.

Frozen Pudding

Use above recipe, adding one-fourth teaspoon vanilla, one-half tablespoon sugar and pinch of salt. Freeze.

The plain cream without the chocolate made with less flour to make a thinner cream is good served with sliced fruit, such as bananas, or as a custard with fruit gelatine pudding.

HOW TO COOK BRINED VEGETABLES

Stuffed Green Tomatoes

Soak salted green tomatoes for two hours. Remove a thin slice from the top of each, take out the seeds, and fill the cavity with a mixture of boiled rice, well seasoned with onion, paprika, and ground peanuts. Place the tomatoes in a baking dish, and add sufficient stock to almost cover them. Cover the dish, and bake it slowly until the tomatoes are tender, about one hour.

Stuffed Green Peppers

Soak the peppers for two hours. Boil until tender and stuff with the mixture used for tomatoes. Cover the top with buttered crumbs. Bake for 30 minutes. Any kind of left over meat may be used instead of peanuts.

Ripe Tomato Salad

Use tomatoes that have been pre-

8989—Girls' Coat. Cut in sizes 6, 8, 10, 12 and 14 years. The coat is slightly double-breasted and the neck may be fastened in three ways.

8976—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The plain waist has an inset vest with rounded upper edge and the skirt is a two piece model.

8968—Ladies' One Piece Dress. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. A dainty collar of white satin or organdie finishes the neck.

8987—Ladies' Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The three-gored skirt is gathered to the waist in surplice effect.

8972—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The neck is cut in a slender square outline and is finished with a sailor collar of the same material.

8979—Ladies' Straight Gathered Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The model shown has the desirable long slender lines with slight fulness at the top.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

served in salt and vinegar solution. Soak them for 30 minutes. Peel them, and remove the stem ends and the seeds. Fill the cavities with minced green pepper that has been preserved in salt and vinegar solution and rinsed but not soaked, with celery moistened with salad dressing. Place a spoonful of the dressing on top, and serve the tomatoes on lettuce or finely sliced cabbage.

Green Tomato Pie

Two cups salted green tomatoes, two-thirds cup syrup, two tablespoons cornstarch, two tablespoons butter, one teaspoon grated lemon rind, two teaspoons lemon juice or vinegar.

Soak the tomatoes for two hours, cut them in small pieces, and cook until tender. Add the other ingredients, and cook the mixture until it is thick and clear. It may be used for a two-crust pie, or it may be placed in a lower crust and covered with a meringue.

Mock Mincemeat

Three pounds salted green tomatoes, two pounds apples, one cup chopped suet, two cups molasses, one cup corn syrup, one pound raisins, one cup vinegar, one teaspoon cloves, two tablespoons cinnamon, one teaspoon allspice, one teaspoon nutmeg.

Soak the tomatoes for two hours, and chop them fine. Chop the apples. Add the other ingredients, and cook the mixture until it is thick. This mincemeat will keep for some time in a covered jar.

Green Tomato Conserve

One pint salted green tomatoes, one tart apple, diced, not pared, two cups syrup, juice of one lemon, grated rind of one-half lemon.

Soak the tomatoes for two hours, and dice them. Cook the tomato and the apple in a small amount of water until they are tender. Do not drain them. Add the other ingredients, and cook the mixture until it is thick and clear. If desired, about one tablespoon of preserved ginger may be added.

THE GREATEST WOMAN

Who is the greatest woman in all history?

One hundred and fifty school teachers recently answered the question, and with enthusiasm and unanimity the judges awarded the prize to the one who made this reply:

"The wife of a farmer of moderate means, who does her own cooking, washing, ironing, sewing, brings up a family of boys and girls to be useful members of society, and has time for intellectual improvement."

CERTAINLY KNOT

Tenderfoot—Why do they use knots on the ocean instead of miles?

Second Class Scout—Well, you see, they couldn't have the ocean tide without knots.

—Boy's Life.

WEIGHT VS. SPEED

A man left his umbrella in the stand in a hotel with a card bearing the following inscription attached to it: "This umbrella belongs to a man who can deal a blow of 250 pounds. Will return in ten minutes."

On returning for his property he found in its place a card inscribed: "This card was left here by a man who can run one mile in four minutes. I shall not be back."

PARTED COMPANY

"Yes," said the stout man. "I went into that deal with $10,000."

"How did you come out?"

"Alone."

a Message to Housewives

—to the women of the Pacific Coast who wish to save fuel, save labor, save clothes and save money.

We want you to try this wonderful Cocoa Naptha Soap on your next wash day. We know that once you try it you will always buy it. It really works like magic—does away with most of the rubbing and saves fuel because you can use it in cold water and no boiling is necessary.

Ask your dealer to include a few bars with your next order.

Cocoa Naptha Soap is made in California by Los Angeles Soap Co., so every bar you use helps local industries and aids the government in its freight problem.

SULPHUR

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards six times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste — (Atomic Sulphur) and for Dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand Refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

San Francisco Sulphur Co.
624 California St. San Francisco, Cal.

We are equipped to make immediate shipment. Send for illustrated booklet; price list and samples. Tel. Kearny 871.

GOAT MANURE

A Natural Fertilizer
Shipped in Bulk
Ground and Unground
Also
Ground in Sacks

This is in fine mechanical condition, and on account of its large Phosphoric and Potash content, is a very suitable fertilizer for this season of the year.

Los Angeles

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS, MARCH 21, 1916.

of California Cultivator, published weekly at Los Angeles, Cal., for October 1, 1918.
State of California, County of Los Angeles, SS.

Before me, a Notary Public in and for the State and County aforesaid, personally appeared Frank H. Thomas, who, having been duly sworn according to law, deposes and says that he is the publisher and business manager of the California Cultivator and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

NAME OF—	POST OFFICE ADDRESS.
Publisher, Cultivator Publishing Co.,	Los Angeles, Cal.
Editor, C. B. Messenger,	Los Angeles, Cal.
Managing Editor,	
Business Manager, Frank H. Thomas,	Los Angeles, Cal.

2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding one per cent or more of the total amount of stock.)

Cultivator Publishing Co.
Frank H. Thomas, Los Angeles, Cal.
R. M. Teague, San Dimas, Cal.

3. That the known bondholders, mortgagees, and other security holders owning or holding one per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

4. That the paragraphs next above, giving names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholders or security holder appear upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is————. (This information is required from daily publications only.)

FRANK H. THOMAS, Manager.

Sworn to and subscribed before me this 4th day of October, 1918.
H. E. STORRS, Notary Public in and for Los Angeles County, California. (SEAL)
(My commission expires March 22, 1921.)

cents more.

	Practically Peeled	Yellows (Old style)	Muirs (Old style)
Standard	12⅞c	11¼c	11⅝c
Choice	13⅜c	11¾c	11⅞c
Fancy	14⅜c	12½c	12⅞c
Ex. Fancy	15½c	13¼c	14c
Slabs		10¼c	

Prunes and Apricots. The Prune and Apricot Growers Association have named following prices on apricots:

Beeswax	32@34

HAY

Under date of October 11, Scott, Magner & Miller says:

Receipts past week only 553 tons. Most of the arrivals have been hay that has been out in the weather and is more or less damaged and it has had to be placed upon arrival at the best possible prices obtalnable.

Hay ex the warehouses is beginning to arrive in a small way, a few cars having been brought in to date and for this hay higher prices are being demanded and, when sold, obtained as storage charges for the season have accrued and must be obtalned in order to prevent losses. Therefore, our quotatlons are higher than heretofore.

There is some demand for fancy grades of Wheat Hay and Red Oat Hay, but Falr to No. 1 grades are not much sought for and the market on same is rather dull.

A new crop of alfalfa is fast coming on but whether we will have proper weather conditions for curing and balling this crop is a question that no one can answer at present.

Grass is of wonderful growth at present practlcally throughout the entire state. Volunteer barley in some sections is as thick on the ground as though it were sown and up as high as a foot and a half at the present time. Thls, of course, assures feed for some time.

Some damaged straw has arrived during the week but it is hard to dispose of. Good dry straw could probably be disposed of to advantage in a small way.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditlons.

Fancy Wheat Hay	
Fancy Wheat Hay (light 5 wire bale)	28.00@30.00

Citrus Fruit Market

Los Angeles, October 16, 1918.

With orange shipments practically ended the auctions are wildly grabbing every offering, some at almost fabulous prices. Every sales shows practically all figures above the $10.00 and $12.00 mark. The top price during the past week $18.60. There are not more than 60 or 75 cars left in California orchards, with perhaps a hundred or more in transit and on sidings. Practically all fruit will be cleaned up in orchard and packing house before the new year, November 1.

Lemons are likewise commanding high prices, but owing to large receipts of foreigns they are not as high as oranges.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 14,171 cars, lemons 5767, total 19,938. To same date last season, oranges 39,495, lemons 7617, total 47,112. Central California this season; oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 485.

AT THE AUCTIONS

October 9

New York: 7 oranges, 2 lem. Val. 8.15-13.10, lem 2.60-7.25.

Pittsburg: 1 orange, 1 lem. Val. 8.70-10.00, lem. 2.80-5.65.

St. Louis: 1 Val. 9.40.

Boston: 2 oranges, 3 lem. Val. 7.80-11.85, lem. 3.45-5.15.

October 10

New York: 8 oranges, 3 lem. Val. 9.45-14.00, lem. 5.70-7.20.

Boston: 2 oranges, 2 lem. Val. 9.60-10.95, lem. 2.55-6.35.

October 11

New York: 5 oranges, 3 lem. Val. 9.95-13.20, lem. 4.25-6.25.

Philadelphia: 4 oranges, 1 lem. Val. 8.50-13.20, lem. 6.70-6.90.

St. Louis: 2 oranges. Val. 7.60-9.20.

Boston: 4 oranges, 1 lem. Val. 7.90-11.75.

October 14

New York: 10 oranges, 6 lem. Val. 11.40-15.85, lem. 6.30-8.45.

Boston: 5 oranges, 3 lem. Val. 8.05-11.20, lem. 4.00-5.35.

St. Louis: 1 lem. 5.80-7.00.

October 15

New York: 5 oranges, 7 lem.. Oranges 14.70-18.60, seedlings, 12.15, lemons 7.35-9.05.

Boston: 3 oranges, 2 lem. Val 7.95-11.55.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of produce from California for the week ending October 12; Apples, 161; cabbage, 4; cantaloupes, 1; carrots, 6; casabas, 10; cauliflower, 2; cucumbers, 1; dried apricots, 8; dried beans, 121; dried figs, 14; dried peaches, 10; dried pears, 6; dried peas, 1; dried prunes, 17; grapes, 1758; lettuce, 8; mixed fruit, 3; mixed vegetables, 19; mixed fruit and vegetables, 28; mixed dried fruit, 20; onions, 150; peaches, 2; pears, 61; peppers, 12; persimmons, 3; pomegranates, 6; potatoes, 284; quinces, 1; raisins, 101; sweet potatoes, 26; tomatoes, 163; watermelons, 5.

BRINE-SALTING OF FISH

All along the coast of the United States a small local business is carried on in pickling fish for use during the winter in the homes of fishermen and their neighbors. Among the species thus prepared are bluefish, squeteague or sea trout, channel bass, croakers, perch, sheepshead, Spanish mackerel, striped bass, black bass, hogfish, etc. There is no uniform method of pickling, the fish being dressed, salted and packed according to the fancies and convenience of the curers, and the product rarely goes on the general market. In general, the fish are dressed by removing the head and viscera, and are split down the back or sometimes the belly, so as to lie out flat. They are next washed and soaked until the blood is removed and then covered with salt and placed in barrels, first a sprinkling of salt and then a layer of fish, and so on until the barrel is filled. Then brine is poured in to fill the interstices and the barrel is headed and coopered.

The Avery Motor Cultivator

It is a two-row machine and cultivates 16 to 18 acres per day of any crop planted in rows—at a much lesser cost than you can do the work with horses.

The Avery Motor Cultivator is more than a cultivator. It can be used for hay loading, hay raking, harrowing or for belt work wherever power is needed.

Motorize Your Farm

Send us your name and address and we will send you a complete description of the Avery Cultivator and Avery Tractors.

Write and learn how to raise bigger crops for less money with less work.

F. H. Poss Company

California Distributors for Avery Farm Implements.

67-69 Beale St. San Francisco

Stop Wasting Money On Your Stump Land Turn It Into Dollars

GRASP the OPPORTUNITY and put DOLLARS in your pocket by clearing your stump land. Stump land was never so valuable as it is TO-DAY. The "K" Stump Puller will do the work in less time and the least expense. Cost just about ½ of a horse power machine and about ¼ of the cost of dynamite. One man or woman with a "K" can out pull 16 large horses. One person single handed can pull from 50 to 150 stumps per day.

HAND POWER K Stump Puller

Weight, without cable, 171 pounds

No stump too big for the "K"

works by leverage—same principle as a jack—one man can lift or pull 48 tons alone. Works easy as rowing a boat. Works on hillsides or marshes where horses cannot operate. Has 2 speeds and weighs 171 pounds. Made of the best steel. Absolutely guaranteed against breakage. Endorsed by U. S. Government officials. Highest bank references.

Send for my special offer and free book on Land Clearing

WALTER J. FITZPATRICK Box 17 182 Fifth St., San Francisco, Calif.

I Am Public Opinion

All men fear me!

I declare that Uncle Sam shall not go to his knees to beg you to buy his bonds. That is no position for a fighting man. But if you have the money to buy, and do not buy, I will make this No Man's Land for you!

I will judge you not by an allegiance expressed in mere words.

I will judge you not by your mad cheers as our boys march away to whatever fate may have in store for them.

I will judge you not by the warmth of the tears you shed over the lists of the dead and the injured that come to us from time to time.

I will judge you not by your uncovered head and solemn mien as our maimed in battle return to our shores for loving care.

But, as wise as I am just, I will judge you by the material aid you give to the fighting men who are facing death that you may live and move and have your being in a world made safe.

I warn you—don't talk patriotism over here, unless your money is talking victory Over There.

I am Public Opinion!

As I judge, all men stand or fall!

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

We recently had the pleasure of eating our first California grown banana. It was not even half bad. In years past we had a taste of alleged bananas grown in this state which, like some beefsteaks, were peculiarly resistant. But this last banana, grown in the open, in Hollywood on the outskirts of Los Angeles, had much the texture and flavor of the imported fruit. But the pineapple has yet to be grown in this state which has the luscious melting flesh of the Hawaiian pine, and we assume it will be many years before a pine will be developed in this state which will be a commercial factor, but the wonderful industry which has grown up in Hawaii is well worth the beautiful cover illustration and the interesting article by Mr. Dahl on fifth page.

PLANTING COVER CROPS

The early rains which covered many portions of the northern part of the state have given opportunity for the planting of green manure or cover crops, and many an orchard will be benefited by this season's planting. In many of the older orchards soil conditions have not been the best, and no better method of giving a bit of life to a soil can be found than the growing of a heavy green manure crop.

W. S. S.

The Liberty Loan drive is over; the war work council campaign is soon to be on; war savings stamps are with us always. This is merely a hint not to forget this necessary feature of the great ship building campaign. It is one in which the children of the nation have entered, but there is appeal to us all not to forget our pledges and to continue the purchasing of the war savings stamps. Every penny of that two billions is needed and California is falling behind.

SHOP EARLY

We haven't it in our heart to deprive the little folks of the pleasures of Christmas, but this is a year when we are all urging each other to refrain from the purchase of needless things in Christmas giving. There is usually an awful lot of junk disposed of under the name of holiday goods. This year that should be forgotten entirely. If any shopping whatever is done let it be at once when good judgment may be allowed to prevail in making purchases.

POSTPONED

The best laid plans of mice and men are put at naught these days of influenza. Just as we go to press a wire announces "California International Live Stock Show postponed. Will open November 16 and continue to and including November 24." San Franciscans are still planning for a great show and we hope they may use the intervening days to perfect it. Some of the live stock for this great exhibit is still in Los Angeles waiting for the Liberty Fair to open its gates. Orders of the health boards are absolute, but people are standing pat and hoping rigid adherence to rules will soon lift the quarantine.

BETTER DAIRYING

The University of California announces its course in market milk production which will be given at the University Farm at Davis, November 11-22. This is the first time such a course has been offered. It will be along most practical lines. Practice work will be given in judging and feeding dairy cows and in treating diseases of dairy cattle. There will be testing of milk and cream, separation and clarification of milk, pasteurizing, refrigeration, and especially sanitation will be taught. We trust particular emphasis will be given to judging and feeding, for of all the discouraging things the dairy farmer has to deal with we believe the boarder cow and the purchase of concentrates hold first place.

CONVERTING BONDS

The government has announced that the privilege of converting Liberty Loan fours into four and a quarters ends November 9. There are two advantages to be secured by the conversion; first, one-fourth of one per cent increase in interest; and second, it is almost certain that the fours will command a lower place on the market, so, if one should care to sell a greater discount would be necessary.

In converting from the old bonds to a new higher interest rate bond the original maturity and interest date will prevail; also all features in regard to taxation will remain exactly the same.

ANOTHER "NEW" WORM

Prof. Ralph E. Smith is investigating "the new worm in walnuts." It is a codling moth and operates very much as does the codling moth of the apple. It is operating in both Santa Barbara and Orange Counties, two large walnut producing centers. The worst of the trouble is that the pest may have entirely ruined the nut and yet outward appearances be perfect. The most fortunate thing in connection with the pest is that the walnut industry is well organized and is conducting a thorough investigation and is ready to follow leaders when it comes to making a fight for eradication.

SPRING GARDENING

Prof. J. W. Lloyd of the agricultural experiment station of the University of Illinois is supplying to Illinois gardeners a circular on fall preparation for spring gardens. He puts the emphasis on the word "now" in:

"Now is the time to make preparations for next year's garden. It is probable that vegetable gardens will play a more important part next year than ever before in contributing to the world's food supply. Every person who can possibly do so should plan to supply at least his own table with vegetables from his own garden. In order to be sure of having a good garden next year, it is wise to begin preparations this fall as above outlined."

If "now" is the time in Illinois it certainly is none too early in California. Spring is only a few weeks away, and the spading and working into the soil of fertilizers is needed to fit the soil for seedbed later.

The war is not over and the war garden is required as emphatically as ever.

LESS SUGAR

One of the war problems which makes an embarrassing situation for the people of nearly all countries is that of securing sugar. The shortage of sugar is one that will remain as long as the war lasts, in fact, longer, for it will obtain through a portion of the reconstruction period. There will be no sugar famine, for the situation is kept in hand by the food administration. When sufficient shipping is released from war activities Java and some other far away sugar producers may relieve the situation from vast stored stocks. Java alone has in excess of 500,000 tons of last year's crop, too far away to be moved. Closer at home, Cuba will produce during the present year an amount increased by 24.7 per cent over last year's production. This increase aggregates 254,000 tons. On the other hand, the United States will produce less than last year by 27.4 per cent, or a loss in this country of 227,000 tons. Porto Rico's production will show an increase of 110 per cent. While the percentage is great the aggregate is only 70,000 tons. On the other hand, the demand in the United States was never so great as at the present. Increased prosperity on the part of all laboring classes gives increased purchasing power, and sugar is feeling this demand to the extent that it must be controlled by the most rigid regulations.

In American production the prospect for 1918-19 is anything but rosy. There is shortage of labor everywhere, and this is being increased by demands of war industries and further inroads by the 18-45 draft regulations. The California producer will decline to face the labor situation with a crop as exacting as sugar when he can raise beans which will stand a degree of neglect and still produce a profitable crop.

One of California's factories stood idle during this season for want of beets. Every effort should be made to secure the operation of all of California's factories another year. The first consideration, however, will be that of labor and the possibilities of cheaper production.

This Week's War Notes

October's draft quota aggregates 350,000 men.

Foch is continuing to knock the junk out of junker and the mania out of Germania.

Six Eastern states report the epidemic of flu abated, while 27 other states report the disease still spreading.

American Red Cross supplies in Great Britain are sufficient to completely outfit 6000 Americans should that number be shipwrecked and all their supplies lost.

German submarines forced out of the harbors of Ostend and Zeebrugge cannot be accommodated in the harbor of Kiel and are now anchored offshore.

The Fourth Liberty Loan was greatly oversubscribed; to what extent is not yet announced because of the mass of subscriptions necessary to canvass. It is presumed that the entire oversubscription will be accepted.

The senate finance committee in revising the revenue bill struck out the house provision taxing the salaries of the president, members of the supreme and superior courts and state officials.

"Austria's death message" is the name given by Rome to President Wilson's reply to Austria's peace note. In a word, the president refers the entire Austrian appeal for peace to the new nation of the Czecho-Slovak people.

A Czecho-Slovak national council recognized as a belligerent de facto government makes declaration of an independent state consisting of Bohemia, Moravia and Silesia, and "we therefore refuse longer to remain a part of Austria-Hungary in any form."

Final count of the losses on the Ticonderoga, sunk in the war zone September 30, shows the total loss to have been 213 lives, of which two were officers and 99 enlisted men. Most of the remainder were members of the crew. Two officers are reported carried off as prisoners by the enemy submarine.

London has figured that in war contributions forced from Belgian citizens by Germany and in war materials and machinery taken from Belgian factories the amount is 384,200,000 pounds sterling. This does not include destruction nor other cash losses, to say nothing of 1,750,000 workmen deported to Germany.

The advance of the Allied troops through Belgium has been more rapid during the past week than at any other time. Ostend, Bruges, Lille, and other important points have been cleared of the enemy. Fifteen thousand German troops were driven over the line and were interned by Holland. At times the Teutons make strong stand and counter-attack in the effort to hold back Allied troops that guns and munitions may be saved, but it is not thought that a determined stand will be made until the line reaching from Antwerp to Metz is reached.

A dispatch from Archangel, dated Monday of this week, says: "The reorganization of the government is bringing quick results as regards mobilization of men to fight the Bolsheviki." In addition, it is reported that there is dissension in the ranks of the Reds. The military arm of the Bolsheviki is dominant and is executing political suspects despite the efforts of Lenine and others claiming to head the revolutionary commission. The Red Cross has established a mission in Archangel which is saving many of the Russians from starvation. Starvation conditions are becoming more serious in Petrograd and Moscow.

German State Secretary of the Foreign Office Solf replies to President Wilson's note with an "offer of peace and an armistice from a government which is free from any arbitrary and irresponsible influence and is supported by the approval of an overwhelming majority of the German people." "It trusts that the president of the United States will approve of no demand which would be irreconcilable with honor of the German people, and with opening the way to a peace of justice." "The German government protests against the reproach of illegal and inhumane actions." "The German government has caused orders to be dispatched to all submarine commanders precluding the torpedoing of all passenger ships."

At the meeting of the French chamber of deputies after the release of Lille from the hands of the enemy welcome was extended to the two deputies, Delorey and Ragheboon who took their seats in that body for the first time in four years. The deputies reported: "It is impossible to denounce all the German crimes, but the most abominable was the carrying off of women and girls of 19 and 16 by enemy soldiers, their enforced submission to medical examination and their being obliged to work under French machine-gun fire for the German army. The Lens plains are nothing but an immense area of ruins with not one house intact. There cannot be a Frenchman who does not wish those culpable chastised."

Cracks and Splits in Oranges

Written for California Cultivator
By Robert W. Hodgson

AT about this time of year the old question as to what is the cause of cracks and splits in oranges never fails to furnish a topic of absorbing interest to orange growers. So far as the writer has been able to ascertain, this phenomenon occurs in practically every citrus producing area in the world. However, there is no doubt but that it occasions far greater losses in some districts than in others. Indeed, in most of the more tropical citrus producing countries it is almost negligible. We are by no means so fortunate in California and Arizona for the annual loss in these two states from the splitting and cracking of oranges reaches a considerable figure.

There is a marked difference in the prevalence of these troubles in the orange growing sections of this state. Those regions where the losses are heaviest comprise the San Joaquin and Sacramento Valleys. Moreover, the amount of cracking and splitting varies from season to season, in some years being very much worse than in others. Although occasionally found in other varieties, by far the greatest amount of splitting and cracking occurs with the Washington Navel variety.

Although commonly classed as splits, it seems desirable to differentiate transverse cracks from longitudinal splits, giving the name "cracks" to the former and "splits" to the latter. Cracks are much less common than splits and hitherto no rational explanation of their cause has been advanced. Splits are much more common and practically every grower has his own pet theory to account for their cause.

There are two distinct classes of splits, side splits and navel end splits. Many of the former, but not all, are attributable to inherent faults in the rind formed while the fruit is still in the flower stage. Such teratological phenomena, as they are called, are very common in citrus fruits, particularly so in the navel orange. Creases or seams are evidences of such weakness and very frequently side splits occur at such weakened areas. Those side splits which cannot be attributed to seams or creases in the rind, together with navel end splits have most frequently been assigned to irregularities in the soil moisture supply resulting in uneven growth stresses and strains between the juice vesicles and the peel. This theory seems quite reasonable and it is the writer's aim in this article to contribute additional evidence supporting this idea, which evidence has been recently brought out in connection with the investigations of Dr. J. Eliot Coit and the writer regarding the June drop of the navel orange.

During its early development the young orange consists very largely of rind with but a small cavity representing the carpels and containing the undeveloped ovules. The juice sacs, which later become the edible portion, are a very small part of the fruit at this time. This condition persists until relatively late in the growth of the fruit. Several months before maturity, however, these juice sacs, which comprise the interior of the fruit, begin to grow and swell at a tremendous rate while the peel coincidentally begins to decrease in thickness. It almost seems that it is being stretched by the expanding force within the orange.

Investigations by Dr. Coit and the writer, as well as later studies by Jensen, have shown that the water content of young developing oranges may vary very markedly within a short time. Extremes in variation during the critical period will cause the fruit to be shed, but after this period is passed all danger from dropping is gone. During the hot dry forenoon the young fruits decrease in water content and toward evening they begin to increase in water content. They actually dry out and then fill up again according either to changes in soil moisture conditions or in atmospheric conditions. If the soil moisture becomes deficient the fruits are the first to exhibit visible effects, losing their bright green luster and becoming flaccid. But even though soil moisture conditions do not go below the wilting point, if the air is sufficiently hot and dry the fruits lose water. Such tremendous variations in water content occasioned in a short period of time and brought about by environmental conditions cannot but be considered as favorable to the occurrence of growth stresses, especially at the time when such rapid growth of the juice sacs is taking place. As the rind becomes thinner, the chances for splitting increase, especially if the soil is allowed to dry and then is irrigated, or if very hot dry weather has been prevailing and a sudden rain comes up. The sudden imbibition of water or what amounts to the same thing, check in evaporation, results in strains and stresses which find their release in rupture of the rind.

The peculiar structure of the navel orange, consisting as it does of a double orange, one within the other, and the central pith of the one acting as stem to the other, provides conditions very much more favorable for splitting in this variety than in others, which is in direct accord with popular observations. Other evidence that this explanation of splitting is substantially correct lies in the fact above mentioned that splitting increases as the environmental complex becomes more severe. The San Joaquin and Sacramento valleys, being subject to sudden variations in temperature and humidity of a considerable magnitude, furnish conditions much more favorable to splitting then are found farther toward the coast. This last season furnished additional evidence supporting this theory. The fall was long and dry and in a large part of the citrus section no rain fell until February. Where the fruit was still growing, immediately following the first rain there were quite a few Valencia splits, although this variety is little subject to splitting.

Most of the splits due to the causes above described, however, on examination will be found to occur in oranges where the rind exhibits considerable variation in thickness. Most of those fruits having navel end splits will be found to have the rind coarse and thick at the stem end but almost as thin as paper at the navel end. This condition seems to be hereditary and therefore such fruits are by nature prone to splitting. While practices favorable to the maintenance of greater stability or less variation in the environmental complex, such as more careful irrigation and cultivation or summer cover crops, will help to prevent splits in this class of fruits, the only true remedy would seem to lie in the propagation of trees from bud-wood selected from trees not exhibiting this condition.

A certain per cent of navel oranges are infected with heart rot fungus, which causes the greater portion of infected fruits to drop. Some, however, remain to maturity. It seems possible that this fungus developing in the navel end might contribute to a portion of the navel end splits. If such be the case, no remedy for splits due to this cause can be seen at present.

For those cracks, side splits, and navel end splits not due to the special contributing causes mentioned above, the only remedy would seem to lie in the amelioration of environmental conditions. Soil moisture conditions can be maintained near the optimum by intelligent irrigation and cultivation, and it would seem reasonable that the summer cover crop would help in ameliorating atmospheric conditions.

Importance of Organic Matter in Soil

By R. S. Vaile

THE first and fundamental thing to learn about the art of agriculture in the tropics is the great importance of organic matter in the soil." This statement, made to me the other day by Mr. Stockdale, director of agriculture of Ceylon, is so in keeping with the thing that the citrus experiment station has been attempting to say for some time past, that it occurred to me you might be interested in certain of the measures which are used and advocated to keep up the organic content of the soil hereabouts.

Green manures are grown directly upon the land which they are intended to fertilize in two rather distinct ways. In the first place a long list of plants are used as annuals or biennials much as we use clovers and vetches in California. This method is followed in the young plantations of rubber and cocoanuts, especially where shading is not in practice. The legume is most commonly grown in strips covering about half the land between the trees, and is cut three or four times a season. The material produced in this way is used to mulch around the trees and is spaded under about once a year. Among the crops used in this way may be mentioned several Crotalarias (especially C. alata, C. mijussi, C. striata), Tephrosias (especially T. candida, which is said to be one of the most successful in Ceylon, T. Hookeriana, T. villosa), Trifoliums (especially T. resupinatum), Leucaenas (especially L. glauca), Indigos, Dhalls and Crotons (especially C. liglium). My attention was called to one rubber plot on the experiment station farm at Perandeniya, Ceylon, where a green crop of dhall had produced approximately 60 tons of green manure per orchard acre in the past 12 months, and I was told that Tephrosia candida at times even exceeded this. It is not usually possible to continue this practice in rubber plantations after the trees are five years of age, except inside hill plantings, where a narrow strip is maintained much longer on the edge of the terraces that are run between the contoured rows. After this time it is often necessary to spend as much as $15 per acre annually for artificial manures to keep up the plantations.

The second method of growing green manure directly on the land where it is to be used is seen in the tea, cacao and coffee plantations where shading the main crop is commonly practiced. The shade is formed by certain leguminous trees, such for instance as the Dadap (Arithrina indica), the Flamboyante (Poinciana regia), several Albuzzias (Albuzzia sp.), and a few species of acacia. The exact variety of tree to be used is determined in large part by the density of shade required, the Albuzzias, for instance, being much more dense than the Arithrinas. As a by-product, so to speak, of the shading, a large amount of green manure is produced by these trees. It is necessary in most cases to lop or heavily prune back the shade annually. The cuttings are broken into comparatively short lengths and used either to mulch around the trees of the major crop, or else are worked into the soil directly as it is spaded over.

In the paddy fields the exact method used in California is frequently followed. Sun hemp (Crotalaria juncea) is most commonly used for this purpose, as it is very well adapted to growing in the moist rice lands. It is not usual to grow such a crop oftener than once in two or three years, but one crop will give a much heavier tonnage than is expected in California. This crop must be cut before it can be worked into the soil, for there are no plows in this part of the world that will invert it directly. (As a matter of fact, about all the modern machinery to be seen in Ceylon or the part of Southern India where I now am, is the disc harrow. This tool is often used in the cocoanut groves, sometimes at the expense of the green manure crop.)

Another method of getting organic material is connected with the rather common practice of storing water from the rainy months in large "tanks," for use in irrigation during the dry periods. These tanks, by the way, are not at all like our reservoirs, but are extensive tracts of land in the floor of a small valley, across which a dam has been thrown. Water may back up behind this dam to cover several hundred acres. It is carried off in small distributing channels to the land farther down the valley as needed. Many of these tanks go dry, or nearly so, at the end of the rainless season, and at that time the floor of the tank is scraped quite clean of

Agricultural News Notes of the Pacific Coast

Northern California

The rice harvest is on.

Gridley has a big crop of English walnuts.

Picking will soon begin in the cotton fields of Butte County.

Alameda County is getting ready for a squirrel poisoning campaign.

The Butte County farm bureau is now publishing a monthly bulletin.

The Almond Growers Exchange is shelling all nuts that show rain damage.

Coyotes are reported doing great damage in Yolo County to sheep and poultry.

Short course in horticulture at Davis University Farm, October 17 to November 2.

Old crop rice is practically out of the way and growers are hoping for good prices for the new crop.

F. J. Cunha of Hayward is urging all growers of peas in that section to get together in a sales organization.

Pear growers of El Dorado County have made plans for a thorough-going campaign against pear blight this fall and winter.

The forest service is advertising for the drilling of deep wells for range cattle in the Badger Springs section of Modoc County.

Many dairymen of Humboldt County are installing mechanical milkers because of the difficulty in securing hands to do the work.

Richvale, Butte County, is harvesting a hig crop of rice. Growers are somewhat afraid that warehouse facilities will he inadequate.

State Horticultural Commissioner Hecke is warning prune and pear growers to look out for thrips. Spraying should begin March 1.

The Hayward Pigeon Club expects to have a 1000-bird show in Novemher. An interesting feature of the show will he an exhibit of Homer pigeons for war use.

Early rains have been welcomed by the stock men of Yuba County. All cattle are heing rushed in from the mountain ranges in anticipation of an early winter.

Local meetings of the Butte County farm bureau will be held at Wyandotte, November 4; Bangor, 6; Thermalito, 7; Paradise, 12; Chico, 15; Durham, 18; Palermo, 20; Biggs, 22; Gridley, 27.

Several Sutter County farmers who have suffered serious loss from rain damage to their prune crops have announced their intention of providing themselves with artificial dryers for another season.

H. J. Veihmeyer, irrigation expert of the state university, has just concluded an investigation of irrigation resources and problems of El Dorado County. His report will he made public through the county farm bureau.

A rice grower in the Richvale district of Butte County has filed injunction against Japanese rice growers on lands above his who are draining their fields and letting the water overflow his grain, which is now ready for harvest.

Butte County olive growers are endeavoring to translate the recent ruling of the department of agriculture as to maturity. This is difficult because coloring matter does not enter into the determination of ripening.

Central California

Tulare Lake is nearly dry.

vest three quarters of a million bushels of wheat in 1919.

Kings County is now conducting a squirrel poisoning campaign.

Fresno County raisin growers have saved a large percentage of their rain damaged crops.

The Peach Growers' Association is now occupying its $25,000 packing plant at Turlock.

The farm bureau at Chowchilla, Madera County, will hold a hog auction sale November 6.

The results of Stanislaus County's squirrel poisoning campaign will be checked up November 1 and 2.

Rains have been welcomed hy owners of orange groves in Tulare County. It will save one irrigation. Stockmen also are happy.

President Joyce of the federal farm loan bank of Berkeley recently made a two-day survey of Fresno County farm resources.

The Stanislaus County farm bureau will hold its annual meeting and picnic in Graceada Park, Modesto, on Saturday, November 16.

Short courses in beekeeping will be given by the University December 2-7 at the University Farm at Davis. The same course will later be given at Visalia.

Petition is being circulated for the formation of an irrigation district including 10,000 acres of land in the Knightsen district, Contra Costa County.

The Kern County farm bureau has recently established a dairymen's department, alfalfa growers department, swine raisers' department and a cattlemen's department.

The first session of the moving tractor school, a recently planned state activity, was opened at Madera October 7. Other sessions will be held at different points in the state.

Four carloads of sheep were recently received for distribution to members of the Stanislaus County farm hureau. Members have pledged to take on their farms 2291 sheep.

Enrollment for the first rolling tractor school at Madera high school was so large that several high school boys were refused admittance. Only four hoys of draft age were enrolled.

Chairman Conley of the Madera County council of defense announces that farmers may now dispose of their straw as they see fit, as the government has filled all of its straw contracts.

Henry Markarian, a Fresno fig grower, addressed the members of Chowchilla farm bureau at a recent meeting. He considers much acreage in Madera County suitable for Smyrna fig growing.

Local meetings of the Stanislaus County farm bureau will be held at Mt. View, November 1; Hughson, 4; Jennings, 6; Tegner, 8; Denair, 11; Mitchell, 12; Thalheim, 13; Fairview, 15; Orange Blossom, 16; Wood Colony, 18; Patterson, 22; Claus, 27; Ceres, 28.

The water committee of the Kern County farm bureau is inaugurating a campaign for the financing of a preliminary water and irrigation investigation in Kern County. Voluntary contrihutions hy the landowners, at the rate of ten per cent per acre, is the plan for raising the necessary funds.

Southern California

Barley is selling in Imperial Valley at $1.90 per hundred.

The Talhert heet dumps have been closed for the season.

A numher of Riverside County dairies secured awards at the state fair.

Imperial Valley date growers are getting some excellent fruit from seedlings.

The State Fruit Growers convention will be held at Riverside November 11-16.

Ontario farmers are being urged to a strenuous campaign against the Russian thistle.

The Milk Goat Association of California held an interesting session at the Riverside fair.

Ventura's County Fair, while not so large as in former years, was a success from every viewpoint.

Sorghum mill has been installed at Pomona. Many people have heen raising their own sweets this year.

The cow testing department of the Riverside County fair was one of the most interesting features to attendants.

Riverside beekeepers are much encouraged over the prospects for good market. Bees are now busy on wild buckwheat.

Riverside orange growers are considering employing orange pickers from the Women's Land Army for the coming harvest.

Ventura County officials are warning ranchers not to overload their wagons to the detriment of the newly paved county roads.

The Anaheim Walnut Growers' Association shipped a carload of walnuts to the Boston market. The carload was valued at $12,000.

The October rains have also embarrassed beet growers whose sugar beets are still in the ground, and they fear losing sugar content.

Three carloads of walnuts shipped out last week by the Richland Association brought returns of $12,040, $11,760 and $11,086 respectively.

Children of Center school, near Somis, Ventura County, have turned over $164.78 to the Red Cross from their season's crop of lima beans.

Farmers are having quite a bit of trouhle getting harvest hands in Imperial County. Cotton pickers and day laborers are needed at good pay.

The first annual meeting of the Los Angeles farm bureau, which was to he held October 17, was postponed indefinitely on account of the influenza.

The Imperial Valley Press states that ranchers of the North End are raising a subscription fund of $10,000 to complete the drainage canal to the river.

The Beaumont Fruit Growers' Association is still shipping out a carload of apples per day. Buyers have heen ready to take all fruit offered at good prices.

Meeting of the Avocado Growers' Association, postponed on account of the influenza quarantine, will be held as soon as possihle. Members will be notified of the date.

It is anticipated that 4,000 acres will be planted to lettuce in the Imperial Valley. For a time it appeared that the lettuce industry would be handicapped hy inability to secure refrigerator cars, but that danger seems past.

The Coast and General

Nebraska has a big crop of poultry this year.

Florida's pecan crop will be only 50 per cent of normal.

Florida shipped out last week 124 carloads of grapefruit.

Many apple growing sections of New York will this year sell apples in bulk.

Frost has done considerable damage to the celery crop of Western New York.

The potato shipping season of the Northwest is very much behind last year's.

Thurston County, Washington, has decided to dispense with the services of a farm agent.

Recent storms in Florida have damaged the citrus crop it is estimated to the extent of 100,000 boxes.

Most of the harvesting of apples in the orchards of Dufur district of Oregon has been done hy women and girls.

Sheep men of Nevada and Utah are worried over scarcity of herders and exorhitant wages demanded by the few available.

The hoys' and girls' agricultural clubs of Skagit County, Washington, held a fair and exhibit at Mount Vernon, October 11-12.

Farmers of the Ritzville district of Washington have secured seed for fall wheat from Montana. They are expecting to plant a considerable acreage.

Canada has a good potato crop. It is expected to be larger than last year's. Manitoba will have a million hushels more than its large crop of 1916.

Kansas City jobbers paid last week for California heans: Blackeye, $7.50; Lady Washington, $11.20; Pinks, $8.40; pea beans, choice, hand picked, $10.30.

Texas shippers of green vegetables are protesting over the new express regulations which base freight charges on actual weights instead of estimated weights as has been the custom.

Cabbage growers of Wisconsin have been supplied with disease resistant seed for this year's planting. "Cabbage yellows" has made serious inroads in plantings of former years.

Steps are heing taken to organize the hutter, cheese and egg trade of the United States and to appoint representatives to an advisory council to take up questions with government authorities.

Dairymen of the country have been in conference with Food Administrator Hoover in an effort to devise some means of reducing inflated prices of butter caused by the large army and navy demands.

On account of loss of prunes from weather conditions in California Oregon prune growers have been asked hy the government to hold their dried crop until the government can make a recheck and determine how much of the Oregon output must be reserved for army needs.

Members of the Yakima (Washington) Potato Growers' Association, which is said to control about three-fourths of the valley's production, have agreed to stand by $40 a ton as the minimum price for No. 1 Netted Gem potatoes and $36 as the minimum for other varieties.

Where Pineapples Come From

By Arthur L. Dahl

THERE are some fruits served on family tables throughout the world that carry with them the suggestion of the Orient. They conjure up pictures of beautiful tropical countries, with warm, brilliant skies, dense growths of palms and odorous plants and picturesque natives fantastically garbed. The pineapple is of this sort, and when we eat the delicious fruit, the odor and taste are indelibly associated in our minds with the far-away places of the earth.

The story of the development of the pineapple industry is replete with incidents of the constant fight of man to overcome the handicaps of a hot climate, for it shows how a tropical fruit, unsuited for being transported long distances, has been brought to the tables of dwellers in every country through the science of canning. The bouquet and quality of the pineapple is not only entirely retained by canning, but the process insures a higher degree of maturity in the marketed product because the fruit, when canned, is not picked until fully ripe; whereas when shipped in the fresh state it is necessary to pick them before the sugar content has reached its full measure.

The pineapple grows wild in most tropical countries, and the export of the fruit forms a large part of the trade of the West Indies. Although the fruit is successfully grown in Florida, large quantitier are imported from the Bahamas and Hawaii. The fruit from Hawaii is said to have no superior, and the exports from that source are steadily increasing. While large quantities of fresh fruit are shipped to this country the principal efforts of the pineapple growers are centered in canning the fruit. Today the Hawaiian canned pineapple is the very finest in the world, and in the development of this industry the greatest strides have been made along the line of mechanical appliances for handling the product. The packing plants of the islands represent the last word in cleanliness and efficiency, and this is in strong contrast to the primitive methods still in vogue in Singapore, for many years the center of the pineapple trade.

Baltimore was the pioneer pineapple canning center in this country and in the early nineties millions of the fresh fruit were sent there from the tropical countries. A regular line of fruit steamers was operated to carry the fruit from the West Indies. Later the Cuban pineapple supplanted the Bahamas, the fruit being shipped to New York by steamer, and then to Baltimore by rail. With the entry of Hawaii into the American market, the Baltimore industry declined, although the canning of the fruit is still carried on there. Next to Hawaii, the largest supply of pineapples comes from Singapore and the Straits Settlements, while smaller quantities are produced in Siam, Formosa, the South of China and the Philippines.

Pineapples were grown to a limited extent in the Hawaiian Islands as early as 1890, but none of the product was canned until 1900. As indicative of the rapid growth of the industry it is interesting to note that from 2000 cases canned in 1901 the production jumped to almost three million cases in 1917. The great bulk of the fruit is packed by ten large companies, nearly all of which are controlled by American capital, such large interests as Libby, McNeill & Libby finding the venture a profitable one.

Hawaiian Pineapple Field Ready for Harvest

The pineapple industry in the islands is confined almost entirely to the Oahu district, the heart of the industry being at Wahiawa, which is a large plateau occupying the central portion of the island of Oahu and having an altitude of 500 to 1200 feet. The concentration of the pineapple plantations in this district is not due so much to its peculiar adaptability for that purpose, but rather because of its superior transportation facilities. The fruit grows with equal success in other parts of the islands and the acreage is being gradually extended as better transportation facilities are developed.

The first factories were erected in the pineapple districts, and several of the large ones are still operated there, but with the completion of a railroad from the Wahiawa district to Honolulu most of the plants found it more advantageous to locate in Honolulu, where labor is more plentiful and shipping facilities are better. As the fresh fruit is carried but a distance of 22 miles from the plantations to the factories, it reaches the canners in as good condition as it would if handled locally.

Pineapples are canned throughout the year, but the principal portion of the pack is put up between May and September.

The fruit is picked for canning only after it has thoroughly ripened, and the pickers go along the rows choosing such as are ready for the factory. After cutting off the crowns, which are left at the ends of the rows in the fields to be used for replanting, the pineapples are placed in wooden boxes, so constructed that one can be piled on another without injuring the fruit. The average canning pineapple weighs from three to four pounds.

Arriving at the factory the boxes are loaded upon trucks and wheeled direct to the peeling room.

There are a number of different machines designed for peeling pineapples. The earlier, and cruder machines merely peeled the rind and removed the "eyes" but the newer machines combine these steps with those of removing the core and cutting the fruit into a size to fit the can. A second machine slices the pineapple to a uniform thickness.

Owing to the fact that the public had been educated to use certain sizes of cans, the early canning processes involved an enormous waste. Frequently a pineapple weighing from six to ten pounds would be cut down to the same size as one weighing half as much, and as much as 40 per cent of the fruit thrown away. As the sweetest part is that next to the skin, this waste carried with it the best part of the pineapple. Again, no effort was made to save the juice which flowed from the fruit as it was pared and sliced. The modern practice, however, is to save all of the fleshy part of the fruit and put it through machines which separate the flesh from the rind and eyes, grinding it up into crushed or grated pineapple, which is canned and sold to confectioners and other large users of the crushed fruit.

As the pineapple passes through the sizing, paring and slicing machines, the rind and attached flesh drops to a conveyor belt moving towards the macerator. It is fed from this conveyor automatically into the macerator and carried to the press. The skins and eyes are put through a press to extract as much of the juice as possible, after which the pulp is burned.

The main portion of the pineapple passes from the machines in another direction, over a separate set of conveyor belts between lines of women seated at tables. These women, wearing rubber gloves, select the various grades of slices from the moving belt. The first women pick out the best slices, of which it takes eight to fill a number 2½ can. The other women farther along the belt take the second grades of slices, and the women at the end receive the poorest or broken slices. As the flesh of this fruit is very tender and juicy, much of the finest quality goes into the lower grades by reason of the slices failing to retain their shape during the processing.

After the sliced fruit has been placed in the cans they are put upon mechanical conveyors which carry them to the syruping machines, where the cans are filled with syrup. The same belt then carries the cans through a steam box where the air is exhausted in the cans before the tops are automatically fastened by double reamer machines. After capping they are placed in trays and transferred to the open-bath processing tank, where they are allowed to remain about 30 minutes. The time during which they are cooked is usually regulated by machinery, as the cans are automatically carried through the cooker at such a speed that they will emerge at the end of the alloted time, to be plunged

Walnut Crop Threatened

By William Wood, Horticultural Commissioner, Los Angeles County

THERE is a new infestation of what threatens to be a real pest to the walnut industry —the codlin moth. For 15 or more years this insect has occasionally been found attacking the walnut, but as it was only an occasional nut affected it was thought the insect would never become a real pest because the walnut was not a real host plant, and that it would never become numerous enough to be considered.

In this we see that we were mistaken. It would seem that the codlin moth is gradually becoming accustomed to the walnut. Prof. Ralph E. Smith has been making quite an extensive investigation of the walnut groves in Santa Barbara, Ventura, Orange and Los Angeles Counties. He reports that half of the walnut crop in some of the orchards in Santa Barbara and Orange Counties has been destroyed this year by this insect. He also reports that he was unable to find any nuts infested by this insect in Los Angeles County.

This matter has been brought to my attention by Prof. Smith and by the Walnut Growers' Association to see if anything can be done to keep the cull walnuts that are grown in the infested counties from coming into Los Angeles city, as a very large per cent of the worms are to be found in the cull nuts, also in the bags that contain them, and practically all of this class of nuts are brought to this city.

Prof. Smith agrees with me that these nuts should be disinfected as well as the bags, before they are allowed to come into this county. I believe our horticultural law is adequate to cover this and protect the growers from the introduction of this pest and it is my intention to enforce the disinfection of all cull walnuts and the bags that are used to contain them before they will be admitted into Los Angeles County.

Growers who wish to sell their culls in Los Angeles County must have the walnuts disinfected and a certificate from their horticultural commissioner or an inspector must accompany the shipment, certifying that the nuts and the bags they are in have been properly disinfected. If upon inspection in Los Angeles County, the nuts are found to be free from live insects, they will be allowed to be sold.

I recommend the following disinfectant for walnuts:

Stack the nuts six trays high. Cover with a tight canvas large enough so that the edges can be weighed down with earth, then burn eight ounces of flowers of sulphur under the trays. The canvas should be left on for two hours.

Northern California Notes

Written for California Cultivator By W. S. Guilford

THE rainy weather of the latter part of September and the first of October has been followed by light north wind and sunshine. This greatly delights the rice growers and has made it possible to save many prunes that would otherwise have been lost.

On the dry yards where large tonnages of fruit were being handled it was not possible to move the fruit on the trays—stack them and lay them out fast enough to make the greatest possible saving of fruit—but where there were fewer prunes and more labor the prunes were kept on the move until this good weather has made it possible to dry them.

Some of the prunes have been dipped two or more times. Some have used the regular lye dip, rinsing the fruit as usual; some have used the lye without rinsing; and some have used salt and water. Good results have followed in some cases with all of these methods. And in other instances the prunes have been so soft and the mould so persistent that it has been necessary to feed them to the hogs.

In the Moody & Burton Orchard at Butte City the loss is estimated at not over 20 per cent including the fruit that spoiled on the ground in the first big rain. At the Monroeville Orchard at Hamilton City the loss on about 60 tons will not be over two tons.

In other orchards, however, the losses are reported up to 60 to 80 per cent of the crop.

Rice harvest has started; the crop from some of the earlier varieties will be threshed and on the way to the warehouse in a few days.

Mature Olives

The department of agriculture has ruled as to the ripeness of "California ripe olives":

"The bureau has received numerous complaints that certain olive packers were packing immature, unripe olives under a labeling which would indicate that the product was a mature, ripe olive, and that these packers so manipulated these immature olives during the process of packing as to give them the characteristic appearance of a ripe olive when packed. Such ammature olives, mislabeled as ripe olives, would be regarded as in violation of the federal food and drugs act if brought under the jurisdiction of the act. An extensive investigation of the changes that occur in the composition of olives during ripening has been made. The results obtained indicate that the index of maturity for olives is the oil content of the flesh.

"As a tentative standard of maturity for Mission olives and other common varieties except Manzanillo, Ascolano and Sevillano, an oil content of 17 per cent in the flesh is regarded as a minimum. The Manzanillo olive should contain a minimum of 15 per cent of oil in the flesh to be regarded as ripe or mature. Olives containing less than the percentage of oil in the flesh specified above would not be regarded as ripe or mature, and, when brought within the jurisdiction of the food and drugs act, would be regarded as in violation thereof. For the large-fruited varieties, such as Ascolano and Sevillano, no standard of maturity is proposed, since these varieties are, of necessity, gathered when immature. Such olives can not properly be designated or labeled as 'Ripe.'

"These minima for the oil content of ripe olives are to be regarded as tentative. The bureau will welcome such suggestions and representations in regard to them as the trade may desire to make. Should it be determined at a later date that the minima above given should be changed in any way, due notice will be issued by means of a service and regulatory announcement."

A Sugar Saver

That 250,000 tons of wine and table grapes now worth $4,000,000 whose market will be cut off by war prohibition in 1919, if made into syrup would be equivalent to 40,000 tons of sugar of a present value of about $8,000,000, is the leading statement of a forthcoming bulletin on grape syrup by the Agricultural College of the University of California.

It is further stated that investigations carried on have resulted in devising methods by which an excellent table and cooking, and even a fruit canning syrup, may be made from these grapes with very slight changes in the present equipment of the wineries and sugar factories of California. It is also proposed that by the cooperation of grapegrowers, wineries, su-

To the names of the illustrious generals of today, history will justly add General Housewife.

gar factories, and canneries in the state, the wineries purchase the grapes during the vintage of 1919, extract and store 50,000,000 gallons of juice, the larger sugar factories receive this juice during the spring and summer, concentrate it, and ship the syrup to the canneries for utilization in 1920. By using the major part of this syrup in the proportion of 25 per cent to 50 per cent with sugar in most of their canning, and entirely with some fruits, the quality of their product would in no way be lowered.

Regarding the marketing of the grape-syrup the bulletin has the following to say: "It would doubtless be impossible to market this large quantity of new product so quickly without some assistance or encouragement from the government. A regulation allowing the free purchase of grape syrup while limiting the purchase of cane syrup or sugar and permitting the purchase of sugar for canning only when accompanied by a certain proportion of grape syrup would dispose of the whole crop. As grape syrup, made by the processes described in bulletin, has been shown to be wholesome and attractive, such a regulation would work no hardship to consumer or manufacturer and would result in saving a large quantity of food material. It would also safeguard the livelihood of hundreds of families."

THE ALMOND IN CALIFORNIA

The experiment station of the college of agriculture of the University of California at Berkeley recently issued "The Almond in California," by R. H. Taylor. It is Bulletin No. 297. It may be had by writing the station. Here is a bit of a quotation from it which indicates the interesting manner in which it is handled: "The almond (Prunus communis) is supposed to be native to the countries around the Mediterranean and at present the bulk of the world's supply is produced in that region. It resembles the peach somewhat in manner of growth and character of blossoms and leaves, but the wood is much harder and the tree is longer-lived under equally favorable conditions. The fruit, instead of having a thick, fleshy pericarp as in the case of the peach, has a thin, leathery pericarp or hull, which splits on ripening and generally opens when dry, exposing the nut inside.

California produces over 98 per cent of the entire American crop and has done so for many years. During the period from 1900 to 1913 the number of bearing trees remained approximately the same, new plantings having replaced old orchards that were being pulled out. The variation in California production from year to year prior to 1915 is due to seasonal variations rather than to change in acreage."

NURSERYMEN IN JOINT SESSION WITH FARMERS AND FRUIT GROWERS

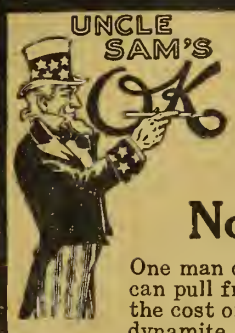
The greatest conclave of horticultural interests California has ever seen will take place in the city of Riverside, November 11 to 15, when the Annual Fruit Growers' and Farmers' Convention, the annual meeting of California Association of Nurserymen and an Interstate Conference on Plant Quarantines will convene.

How many people know the relation of the nurserymen to our horticultural industries? The first requirement for success as a fruit grower is good stock. Without good trees success is not possible. How to get good trees. What is the difference between a good tree and a poor one! Drone trees versus heavy producers. Diseased versus healthy stock for future production. These are some of the questions which the nurserymen will discuss.

The California Association of Nurserymen was organized in June, 1911 in the city of San Jose. The first annual meeting was held in Los Angeles in November of the same year. Its object was to protect and develop the commercial production and sale of plants and trees and to regulate methods of handling the business to insure better grading and classification. If the growers have any grievance to place before the association, here is the opportunity.

The convention week at Riverside is for the entire state and farmers, fruit growers, nurserymen and florists are planning to make this a busy week.

Money In Stump Land



UNCLE SAM says the "K" Hand Power Stump Puller is O. K. Uncle Sam also says turn your stump land into valuable land and produce more. Stump land can be turned into profitable land at a small expense which means more money to you. You are paying taxes on stump land. WHY?

Now is your opportunity

One man or woman singled handed with a "K" Stump Puller can pull from 50 to 150 stumps per day at a cost less than ½ the cost of a horse power machine and about ¼ the cost of dynamite.

NO STUMP TOO BIG FOR THE

HAND POWER **K Stump Puller**

Simple as rowing a boat. No up-keep. Works on hillsides or marshes where horses cannot work. Weighs 171 pounds—easily moved from place to place. Absolutely guaranteed against breakage. Endorsed by the United States Government.

IMPORTANT—To one man in each locality I will make a special money saving offer. Write for it today.

FREE BOOKLET—Simply send your name and address for my free booklet on **Land Clearing.** It tells many things you should know.

Walter J. Fitzpatrick Box 17 182 Fifth St. **San Francisco, Cal.**

MODEL S-25

SAMSON
GMC TRACTORS SIEVE-GRIP GMC TRACTORS
TRACTORS

Farmers have abandoned slow, laborious methods of days gone by. Horse power and hand tools have given way to the tractor and its accompanying implements. For this reason, the demand for increased food production can be met in spite of shortage of labor and horses. As the tractor will be the most potent instrument to accomplish this happy result, how important that you select one best fitted to meet your needs, strong, simple and durable, developed and perfected through many years of actual field service.

THE GMC SAMSON SIEVE-GRIP TRACTOR meets every requirement. It does the work of ten horses, better, faster and cheaper, and is adapted for countless tasks, stationary and otherwise, for many of which horses are not suitable. It has been a demonstrated success for many years.

Its sieve-grip wheels do not pack the soil. They assist cultivation. Air entering its carburetor and crank case vent is washed and freed from dirt and grit, assuring long life to all working parts. Its lubricated roller pinions reduce friction to a minimum and deliver maximum power to the drawbar. Its automatic control secures ease and reliability of action.

For continuous satisfactory performance, buy a GMC SAMSON SIEVE-GRIP TRACTOR. Ask the man who owns one or send for our booklet, Better Farming.

Garden Trees

Written for California Cultivator By Ernest Braunton

NO garden is complete without a few trees. They are a fundamental necessity. Mingled with them should appear a number of shrubs and in front a border or edging of flowers. Then we have the true garden background, also a broken and sufficient sky-line. These features are essentials in the art of garden building.

Some very showy flowers are borne on trees and no shrub or lowly plant could present a more solid mass of flowers than some species of acacia, as well as a few other favored trees, and many are charmingly fragrant. Aside from flowers many trees bear foliage which is not surpassed in beauty by any in the kingdom of plants. And when we consider the fruits that may be gathered from trees of great value as ornamentals, we are again moved to declare that no garden is complete without a few trees. It seems to me that no person in moderate circumstances should harbor a tree that does not produce a fruit crop. Only the rich are at all justified in planting for ornament only. If we did not have evergreen fruit trees every whit as decorative as the best ornamental I would not so persistently urge the dual purpose tree.

Christmas Poinsettias

It will soon be time to feed poinsettia plants with a view to getting holiday flowers. It is now a little late to prune them for Christmas flowers, but if I had tall ungainly plants and lived in a section fairly free from frost I would prune them severely, fertilize and water well and secure good winter flowers. The poinsettia is a gross feeder and will assimilate very frequent meals if they are not too strong. The plant is a native of elevated regions in Mexico and so pines for cool, rarified air. Therefore cool weather, without frost, is the proper atmospheric medium in which to grow large flaming heads. The plant itself grows best in hottest weather if well supplied with water.

Poor Avocados

"A Rancher" writes to say he cannot get a satisfactory growth on avocado trees; that his soil is very light and gravelly and water supply is light. That is a description of soil and other conditions where the growth of avocados should not be attempted. I have no advice to offer other than may be implied in that statement. Dig them up and throw away or ball and transplant to heavier and richer soil where a fair supply of water may be had. No advice as to treatment in their present position will be attempted.

A New California

Now that the British have driven the Moslem hordes out of Palestine it is safe to presume they will never again be allowed to rule it. It will be either a British province or a British protectorate for the present. All fair minded students of history cannot but hope that the Israelites will again populate the land and again make it bring forth abundantly.

Palestine is about one-third as large as California, but in other ways so near like it as to make one marvel. While countries much nearer to us have a vegetation wholly unlike ours, no country on the globe has a native vegetation so near like ours as has Palestine. Its climate has the same range of temperature, rainy and dry seasons. And the topography is closely similar. They have their Dead Sea, below ocean level; we have our Salton Sea.

The Garden Poet

A few years ago the World's Work of New York printed a review of the life work of Dr. L. H. Bailey, the world's foremost horticulturist. The statement was made: ". . . has written more works that are standards in horticulture than any other author, living or dead." But Dr. Bailey's writings range far outside the agricultural and horticultural field, yet always with the aroma of soil and plants emanating therefrom. I rejoice in the possession of many autographed copies presented by this famous author and last week received three. One of them is called "Wind and Weather," a book of nature poems. None of the heroic has been attempted, but all are simple, readable verses carrying a message. List to this one, entitled "White Clover":

"A vagrant plant to my garden came,
And escaped the workman's hoe;
He knew it not by leaf or name,
So he let it stay and grow.

"It grew full well in the garden mould
And covered a space yard-wide;
He watched the honey-white heads unfold
And pointed them out with pride.

"Many a weed in the garden lot
Were fair as the clover blow
If only its name were all forgot
And 'twere giv'n its chance to grow."

Mealy Bugs

Mealy bugs have ravished the gardens for the past few years and the pest is getting no better very fast. In my own garden I have combated it quite successfully with a solution of a well known and popular brand of washing powder, symbolized by a pair of husky dusky twin babies. Those who knew said to use one pound to five gallons of water, but I have used three and a half gallons of water and injured none of the plants to which it was applied, yet it greatly discouraged and depressed the enemy. Their "morale" was completely broken and their ranks badly decimated. In whole divisions not a corporal's guard was left and these are retreating in disorder with death staring at them on all sides. The mealy bug is the most serious of garden pests, but it can be controlled with little trouble.

Cottage Gardens Beautiful

England's cottage gardens have long been noted for their attractiveness and have been much in print and the praises of returning tourists. I am satisfied nearly as much may be said of all countries. The simple taste, simply expressed, is natural and bears a natural dignity and beauty that attracts all. Mr. Mark Fisher was asked to visit and paint in a certain locality in England. He was a noted landscape artist. His reply was: "There are too many gentlemen's places there to suit my work." Too much of man's work was to be seen, masonry, fences, railings, balustrades, figured fountains, small clumps of large trees, whirligig beds in lawns, sausage links and rosettes of plants in roadways, and other evidences of the dominance of aberrant minds drove all artists away. The more natural gardens, and therefore the more beautiful are the cottage gardens.

Compost Leaves---Don't Burn Them

Leaves of all sorts are rich in the chemical elements that plants need. Rotted leaves or leaf mold is one of the oldest and best fertilizers used by gardeners, for it not only enriches the soil but gives to it a fine loose texture which is ideal for plant growth. Garden soils of the rawest and poorest conditions will show much improvement next spring if a quantity of leaves is spaded in this fall. Old gardeners treat a strip of ground in this way each fall, on which to grow the most delicate vegetables the next year.

When leaves are raked up in the fall they should be dumped on the garden, or better still, piled up with a small amount of manure. This will form a compost of the richest kind after the leaves have rotted. The compost is spread thinly in the rows when planting spring crops. Mixed with an equal quantity of earth, it makes the best potting soil for house plants and for use on flower beds. Leaves from trees along the street should always be raked up and used by gardeners in the neighborhood, and forest leaves should be collected wherever available.

THE GREATEST COLONEL IN THE WORLD

Ever since the world was young I have reigned supreme and today, at the head of a conquering army, I am proud to find myself the Greatest Colonel in the World.

In the days of my infancy I established a foundation for a career that has yet to be questioned. Through countless generations I have maintained the respect of mankind, and there lives no one who dares but call me friend.

From early history I have been welcomed in the palace of the king; in the lowly hut of the peasant I am worshiped. In periods of strife among nations I have adjusted myself to the surroundings and have always proven worthy of both victor and vanquished. Travel as you may the world over, on land and sea, from north to south, east to west, I am your constant companion; whether it be in the tiny hamlets and villages or thriving towns and metropolis, striving at all times to maintain that high standard of efficiency that always marks my endeavors.

With Stanley and Livingstone I laid bare the mysteries of the African jungle; with Peary and Amundsen I shared the perils of the Arctic, and thus you find me through centuries of trials and tribulations ever increasing my power to help the world's population in the struggle for existence.

Looking back through the years of my history, through famines and plagues, through revolutions and worldly wars, my sacrifices have been naught compared to the sufferings of the conflict of today, the battle for an everlasting peace and the justification of humanity. As heretofore, I am day by day proving the leading factor in the winning of the war for democracy, and although my army has responded nobly to the call, my ranks will continue to thin unless I have the aid of every individual in every home. And if every man, woman and child (whose liberty will be jeopardized by my failure to prove results) will rally to my standard and sacrifice their pleasure as I have done, there can be but one result—Victory for Democracy, Defeat for Autocracy. And when that joyous day of peace arrives you will find me at your service as a leader of a conquering army: The Greatest Colonel (Kernel) in the World.

My name is WHEAT.—E. M. Van Antwerp, in The Sperry Family.

TRACTOR PLOWING INSURES BETTER WORK

No horse gang can possibly do the quality of work that can be accomplished by an engine gang. Anxiety to spare the team has cut a big slice off the profits of many a farmer. For the sake of his horses he has plowed three or four inches deep when his judgment as a farmer said "go deeper." He has often plowed late on account of hard ground, and he has many times allowed a field to remain unplowed on account of worn-out teams. Under normal conditions, late plowing never produces as good results as early plowing. Many a farmer has fed and harnessed by the light of the lantern, gone to the field and worked his team hard to take advantage of the cool of the morning. With the approach of the hot hours of midday, with vicious flies sapping the vitality from his faithful team, he has eased up on the work or quit the job. In using the tractor for plowing, there are none of these distressing conditions to be taken into consideration, nothing to think of but the quality of work done. It is possible to plow deep without thought of the added burden.

Deep plowing may generally be taken as an indication of good farming. In any normal community the farmers who plow deeper than the average of their neighbors may be safely considered the best managers. These farmers usually have the best crops, because by deep plowing they have been able to use a large quantity of the natural resources of the soil. Deep plowing, especially in heavier soils like clay and those which tend to take on a hard pan character, loosens up the ground and permits easier root penetration and a greater absorption of rain water.

The war calls for the team work of soldier son and soldier father — the hero of the trenches and the hero of the furrow.

A WARNING TO RICE GROWERS

As a war asset the rice crop promises to eclipse previous records. It may not be generally known that the use of rice in the United States has in past years depended largely upon the locality, for in the North it was served as a custard or pudding and in the South invariably as a vegetable. Now it has attained first rank as a conserver of meat and flour.

Adequate storage room in some cases for the new crop has fortunately been provided, but, with the information that freight is congested and that general warehouse facilities are scanty, the question of the conservation of this staple crop is paramount.

Scrupulous care should be exercised that the proposed warehouses are clean and harbor none of the weevils so destructive to rice or to beans and other dried legumes.

When the vast losses due to this pernicious agency, in California alone, are considered, and provided with the advance information that the losses are largely preventable, it is but little short of criminal that they should exist.

If your warehouse is infested with insects, and you are not positive as to their nature, send specimens to the state horticultural commission for determination and remedies.

In any case, fumigate if necessary and clean up before you warehouse your crop.

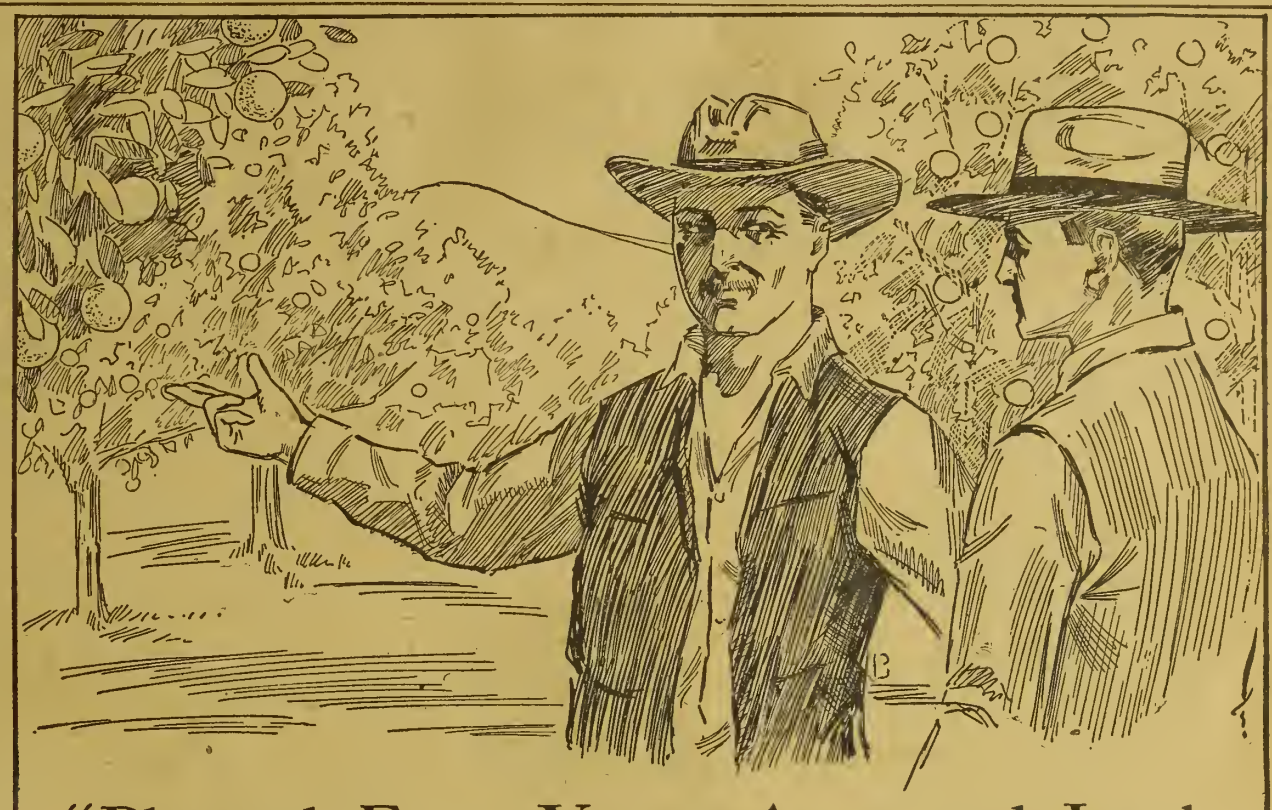
This may save you much money in the end. Such action will aid in maintaining the high standard of excellence for which California is justly noted.

Information on fumigation may be had by addressing the State Commission of Horticulture, Sacramento.

NO LIMITATION ON SALE OF OIL AND GASOLINE

To correct an erroneous impression that has been given circulation, the war industries board and the United States fuel administration join in the announcement that no regulations have been issued with respect to the sale of oil and gasoline. The fuel administration has urged that wasteful practices in the use of oil and gasoline be stopped and all reasonable and proper measures of conservation be observed.

There must be no fear in the matter of giving. If you have only a sandwich to give to a beggar, give it freely and gladly and forget it.



"Planted Four Years Ago, and Look At Them Now"

"Hello Fred—Do you remember when we planted this orchard? Remember how I laughed when you wanted me to try dynamite and blast out the holes instead of digging them, and how you finally talked me into it? Well—I'm laughing another way now, Fred,—and you can bet your boots I thank you for telling me about

HERCULES DYNAMITE

"I never planted an orchard with less labor in my life;—I never had one that grew so fast nor where fewer trees died. And it's bearing a full year ahead of my neighbor's trees that were planted at the same time, in spade dug holes."

"My this-year's crop will pay twenty times over for the dynamite that we use, and it makes me smile to think how easy it was to plant those trees!"

"There are a good many people using dynamite in their orchards around here now. They're finding out that the easiest way is the best way when it comes to planting trees."

"They say, too, that blasting between the rows is a good way to keep your bearing orchards in good shape; it loosens the earth deep around them and gives their roots a chance to spread. I'm going to try it next spring."

"I want to thank you again, Fred, for lending me your copy of 'Progressive Cultivation'. I've got one myself now—the Hercules Powder Co. sends it to you free, if you write them for it. I wouldn't part with my copy for the world!"

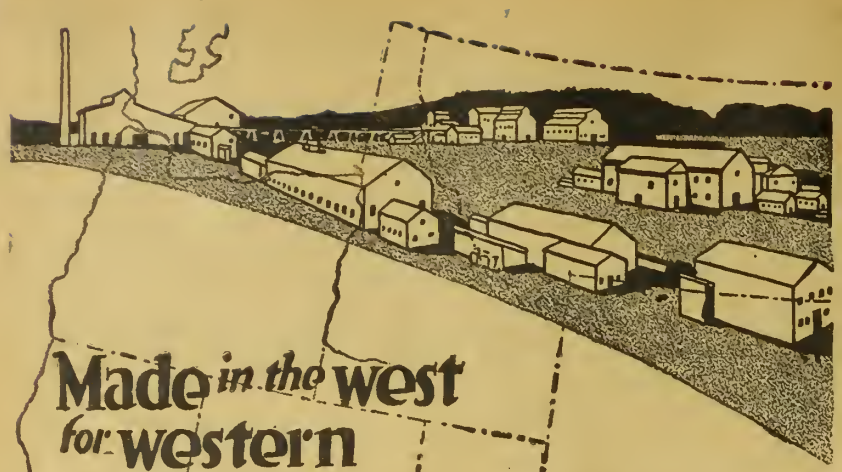
Address _____



Made in the west for western conditions

GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Western soils, stumps and climate need western explosives. That's why Giant Farm Powders cut the cost of clearing western land. Manufactured for more than half a century especially for the West, they naturally give better results on western farms and orchards.

Giant Farm Powders lead in economy because they go further than ordinary explosives. They break up the stumps thoroughly thereby cutting down labor cost. Money and trouble are saved because of their low freezing qualities.

Warning: If your work is done with any other powder or dynamites, the chances are it will not be done as well as with either of the two Giant brands: Eureka Stumping or Giant Stumping. Look for the Giant trademark on every case, and be sure of the genuine,

How to make the farm pay more money is explained in "Better Farming." This big free book, fully illustrated, will be sent you as soon as we receive this coupon.

Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Budding Fruit Trees

When is best time for budding prune on plum and peach on peach? What kind of buds should I take? My buds look very small. Should they be plump or swollen? Should any wax, rag or string be used?—Subscriber, San Anselmo.

All kinds of trees may be budded whenever the bark will lift readily. It will only do that while the sap is flowing, and that is what makes the bud grow. Take the buds from well matured wood of the current year's growth. Cut off the leaves just long enough to miss the bud; cut the bud and insert it in the usual way. Wrap snugly with twine without waxing. Cut the strings when they show signs of binding the bark.—J. W. M.

Stump the World

I have a Stump the World peach tree seven years old, fine large tree and healthy, but has never borne more than a dozen peaches any year. Is that variety considered a good bearer in the vicinity of the ocean? I have cut it back closely several years, but it did not make any difference.—Subscriber, Long Beach.

Stump the World peach is not a prolific bearer in Southern California so far as we know. At Pomona it never bore large crops, but the size and quality were all that could be desired. A good rule to follow with light bearers is to prune light.—J. W. M.

Fermented Grape Wine

Mash four pounds of grapes, put in a crock with four quarts of water, leave in a cool place for three days, stirring often. Strain off the liquid, squeeze the pulp, add three pounds of sugar, stir until dissolved, and put into a barrel, covering with a light cloth. Stand in a dry, cool cellar and when fermentation stops put the cover on the barrel. Leave all winter, rack off or bottle in the spring. For a larger quantity of grapes the same proportions.—F. S. Johnson, Devore.

Goat Not a Milker

I gave a dry goat and $50 for a doe that the purchaser said gave five quarts a day when fresh and he milked her when she gave three quarts. I have fed her well and milked her three times a day and have never yet been able to get more than a little over a pint a day. What can I do?—Subscriber.

The goat breeders' associations should take a hand in cases of this kind. The industry is growing rapidly and drawing to it some of the unscrupulous who are ready to take advantage of innocent purchasers. At the price paid for this animal the conscientious breeder would replace her with one which will deliver the milk. As to the five quart production, the purchaser should not expect anything like this as a consistent yield. We may refer to the record of California Gretel, which appears with her picture in the Cultivator of May 18, 1918, on Page 622. She gave in 365 consecutive days 2941.5 pounds of milk. This was an average of 3.8 quarts for the year, and this is considered a wonderful production and makes her one of the greatest goats in the state if not the entire country. As to advertising the man who sold the animal, that would depend on whether the purchaser has evidence which would be acceptable to a court.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Canner Refuses to Pay

Contracted with Arizona canning company to sell them tomatoes cash weekly settlements; I filled the order for four weeks and no settlement; I advised them that I would stop shipments until payment made and drew draft on them which was refused. The party is financially all right. Can I take the matter up with the United State food administration? He advised shipments were all right; in order to secure and retain his license number is the canner not obliged to give fair treatment?—Subscriber, Ontario.

Legally all you can do is to bring action for breach of contract. The food administration has very large and discretionary powers and it would doubtless take drastic measures in a case such as the one above stated.

Unlicensed Veterinarian

Can a veterinarian charge for services when he is not licensed? Can he sue for services rendered? When by his neglect a valuable animal has been lost can recovery be made for services? The man posed as a licensed veterinarian and I did not know he was not until after the horse was dead.—Subscriber, Santa Ana.

The veterinary surgeons act provides that any person violating the provisions thereof is guilty of a misdemeanor and that any person who performs treatment upon the lower animals or professes to treat them comes under the head of a veterinarian, if he makes charge therefor, except in the case of members of the medical profession in an emergency; the act exempts from its provisions those who practiced prior to 1893. It would therefore seem that for one practicing since that date, he not only could not charge or sue for his services, but he has committed an offense and under the statement of facts he would be liable to you for the loss of the animal.

Will Must Be Probated

Can I draw a legal will which does not require to be probated? I wish to leave a house to a grandson and a mortgage against my daughter and son-in-law to my daughter and appoint my son-in-law executor without bonds. If he is the executor, who releases the mortgage?—Subscriber, Orange.

Every will requires probate; this is especially true with real estate. A good form for a will has heretofore been given in these columns. The son-in-law can be appointed executor and under the decree of distribution in the estate the court decrees the satisfaction of the mortgage. This decree is made after all creditors have been satisfied.

Bees a Nuisance

I have a ranch set to vineyard and peaches; my neighbor has an apiary of a hundred hives; the bees do considerable damage to my crops. Can I force the beekeeper to move farther away or make good my losses?—Subscriber, Lakeside.

It has been held in many states that where bees become a source of annoyance and discomfort to the owner of adjoining property and impair the enjoyment thereof it becomes a proper case for a permanent injunction. The writer has been unable to find any case upon the subject of bees in this state, but the rules applicable to injunctions are plain and certainly should apply. The principal difficulty in respect to proving loss and damage

against the bee owner is in establishing that his bees did the damage; that being established, recovery could be has as in any other action of trespassing animals, for the actual loss caused.

Tax on Homestead

I have a homestead in Arizona upon which I submitted final proof in November, 1916, but have never received a patent. Is this land taxable before I receive my patent?—Subscriber, Upland.

When government land has been paid for and certificate given, or when the homestead settler has completed his prescribed term of residence and is entitled to his patent, nothing further remaining to be done and the actual equitable title thereto has passed out of the United States, the property becomes subject to taxation.

Community Fence

My neighbor has alfalfa and stock. I have an orchard and would rather not have a fence. Does law or custom require me to pay one-half of the expense of a line fence?—Subscriber, Turlock.

The provision of the law relative to the above point is as follows: Adjoining owners are mutually bound to maintain equally the fences between them, unless one of them chooses to let his land lie without fencing; in which case, if he afterwards encloses it, he must refund to the other a just proportion of the value, at that time, of any division fence made by the latter.

Foreclosure

A man and his wife own home worth $3500 with mortgage of $1000; also six vacant lots elsewhere. The man with an associate borrowed money from a bank on a joint personal note; the money was lost and the makers are unable to pay. When they gave in their property statement to the bank for the loan they had optimistic views with respect to property values. If the bank sues on the note can it seize the home or can the home be homesteaded? What, if any, effect would the optimistic values of the properties have?—Subscriber.

If the man and wife file declaration of homestead with the county recorder prior to the filing of an attachment by the bank the home will be held exempt from seizure. The lots, of course, can be taken. Except in any case where there was a deliberate attempt to defraud the bank by excessive valuations, or a statement of a fact which was untrue and known to be untrue, no difficulty will be experienced from that source, otherwise it would be a case of criminal prosecution.

Note Outlawed

A holds a note dated July 1, 1913, payable on or before one year after date with interest at seven per cent payable semi-annually. When does this note outlaw? Interest has always been paid, but nothing on the principal. Does that affect it? Could A force the payment of the note by legal action? If so, how should he proceed and what would it cost? The maker is a married man, school teacher and earning good salary. — Subscriber, Long Beach.

The note outlawed on 2nd day of July, 1918, being four years from the maturity date. Payments upon the note either of principal or interest, do not of themselves affect the running of the statute; the statute requires an acknowledgment in writing of the debt, signed by the debtor. The statute runs anew from such acknowledgment. Outlawed notes have many times been collected, but that is a matter for a specialist along those lines. The court fees would depend upon whether the principal of the note was under or over $300; under that sum going into the justice court, the fees would be $5.00 to $7.50; in the superior court approximately $15. Another thing, the earnings of a married man against such indebtedness are exempt from execution, if earned within 30 days from the date of the levy.

WHERE PINEAPPLES COME FROM

Continued from Page 417

into another tank of cold water to stop cooking. Tests are then made of all cans to determine if there are leaks, after which they are ready for the store room. The labels are not placed on the cans until they are ready for shipment.

From the time the pineapples are first brought into the factory until they are canned, they do not come in contact with the human hand at any point, the only time they are handled at all is on the sorting table, and here the workers are required to wear rubber gloves.

It was formerly the custom to discard the cores cut from the pineapples, but now these cores are packed separately, either whole or in big chunks, and they find a ready sale to candy makers who convert them into chocolated coated or glace fruit. These cores now constitute about five per cent of the entire pack, and the supply is not equal to the demand. The fiber of the core is coarser than the fleshy part of the fruit, and consequently hangs together better, which accounts for the preference shown it by confectioners.

Another by-product of the pineapple which is now being utilized is that of the juice. Formerly as much as 10,000 gallons of this juice were pumped into the sea every day. Now the juice is caught in troughs under the different machines and conveyed to a press, where the pulp is separated from the juice, the latter being pumped through aluminum pipes to a filter through which it percolates. It is then brought to a boiling point in a silver-lined vat, after which it is bottled, sealed and processed. As the juice contains about seven per cent of sugar it is not sweetened and makes an excellent beverage when served cold.

A firm of chemists has also been making elaborate experiments to develop a process for making sugar out of the waste pineapple juice. This sugar, a quantity of which has already been produced, is used in making the syrup required for canning the fruit, thus saving the cost of cane sugar.

The principal variety of pineapple grown in the Hawaiian Islands is the Smooth Cayenne, which has a flavor superior to any other.

The pineapple plant matures and bears 18 months after planting. When the first crop is cut, sprouts spring up between the leaves. Several of these are allowed to remain on the plant, the rest being cut. Those remaining on the plant produce a second crop in 12 months. Of those removed, the best are used to start new plants. The planting distances vary. From 2500 to 12,000 plants are used per acre. The closer they are planted the smaller will be the fruit, and in canning this is a decided advantage as less waste is had with the smaller sizes.

Next to the Hawaiian Islands the Singapore product is the best known. Until it was outclassed by the Hawaiian fruit, Singapore canned more pineapples than any other district in the world, but its product is not comparable in quality with that from the islands. There are about 14 factories engaged in canning pineapples in Singapore, practically all controlled by Chinese.

In contrast to the improved mechanical means installed in the Hawaiian factories, practically all of the Singapore produce is put up by hand, the equipment being of the most primitive kind. Large numbers of coolies squat upon the canning tables, preparing the fruit for canning. The various processes in the canning of the fruit is all done by hand, even the tins being turned out by primitive machines.

Be Sure to

VOTE

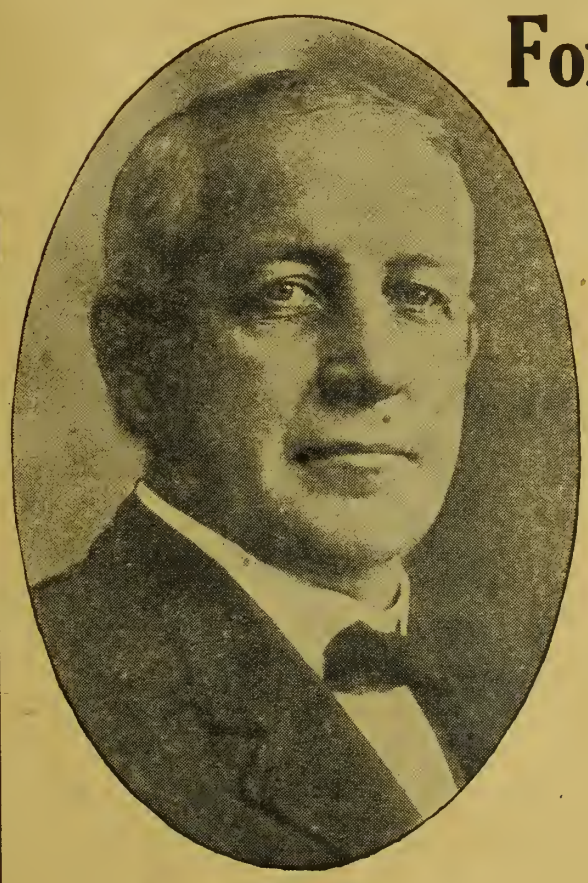
On November 5th

No farm work can be too pressing, no weather too bad to keep you from voting on Tuesday, November 5th.

If nothing else—your duty as a patriot and citizen should prompt you to visit the polls that Day.

The United Dry Forces of California ask your vote and active support.

For These Men



For Governor
WM. D. STEPHENS

Former Mayor of Los Angeles—then Congressman—Now Governor of California. As Congressman, he voted in favor of submitting the Dry Amendment to the Constitution of the United States; as Governor, he favors ratification of that Amendment.

For Lieut. Governor
C. C. YOUNG

Member State Assembly, 10 years; Speaker (Presiding Officer) of Assembly, 6 years. His record in the Legislature has been one hundred per cent good along temperance lines. Along all other lines he has been one of the most efficient men there.

If you favor the ratification by the Legislature of California of the National Dry Amendment—already ratified by 14 other states—we ask you to vote for Wm. D. Stephens and C. C. Young.

D. M. GANDIER, Secretary Ratification Committee

SANTA ANITA RANCHO

Anoakia Breeding Farm

Arabian-Thoroughbreds

Out of our choicest thoroughbred mares and sired by our famous imported stallion Ibn Mahruss we are offering some splendid two year olds. Also some especially desirable young saddle stock sired by Ibn Mahruss, world renowned Arabian desert stallion, and Don Castano, five galted saddle stallion, winner in many prominent shows.

Mammoth Jacks

We have for sale a number of two and three year old jacks, big, growthy fellows of exceptional breeding and quality.

Poland China and Berkshire Boars

Sired by the World's Fair winners, BANKER'S BOY and KINTYRE LAIRD, and by others of our herd boars of equal breeding.

Increase the Editorial Force

THE live stock industry is increasing in California as never before. The high feed prices and the discouragement which some dairymen have felt because of the rigid character of the state dairy law and some city ordinances has caused some to discontinue dairying. But cooperation, increasing demands and patriotism are overcoming obstacles, and even dairying is again coming to its own. It's growing.

So is the California Cultivator.

This growth is indicated by many steps recently taken, and now by the addition of one of the best live stock specialists, R. P. Royce, graduate of the University of the "Show Me" state, and for years with live stock department of the Missouri Farmer and for the past two years with the division of animal husbandry of the University of California, is now with the Cultivator. He will have charge of our Live Stock Department.

R. P. Royce

Mr. Royce has a vision of the future of this branch of California agriculture which adds to his enthusiasm and will make him a factor in the state's upbuilding.

The Cultivator has a most hearty welcome for him and believes the live stock men the state over will be equally as hearty.

Much of the time Mr. Royce will be "at home" to live stock men at the Los Angeles office of the Cultivator. The latch string is always out. But bearing in mind that the tendency of the times is "Service" we assure our readers the services of Mr. Royce are at the command of our readers at all times.

A Basis for Faith in the Live Stock Industry

By R. P. Royce

SINCE the beginning of the era of improved live stock there has never been a time when the industry attracted the attention it does at the present time—and certainly there was never a time when the producer of live stock could view the future with the confidence he is justified in feeling now.

Keen hard-headed men who have taken time to analyze the situation have found a solid basis for their faith. It goes without saying that the war has given a tremendous impetus to the business — but the statement may be ventured, that without the war as a stimulant, it would have taken only a few years longer to have brought about a situation closely paralleling the present.

To see the proposition clearly, it is necessary to go back a number of years to the time when the range country was invaded by the homesteader, and when land was cheap in the Middle West.

In the days of free grass and cheap corn, cattle, hogs and sheep could be produced very cheaply. Naturally, with unlimited range the industry expanded rapidly—faster than our population increased. Production costs were low, the supply greater than the demand, and selling prices low. Then began the invasion of the range and each year the lines were shortened. Finally a slow liquidation of range stock began. A few noticed what was happening and had courage to sound a warning. However, little attention was paid the prophets—as is usually the case.

As a matter of fact, a movement of tremendous importance was going on almost unnoticed. Our whole live stock industry was undergoing a readjustment in an effort to meet developing conditions. True our total live stock holdings were increasing, but the ratio between live stock and population was narrowing. All classes of live stock producers were beginning a systematic improvement of their herds and flocks in an effort to cheapen production through more efficient animals. At times it seemed that this improvement was slow, but really it progressed about as fast as the need developed. All the time the pure bred and high grade sires were winning their way and demonstrating the fact that their use was a business proportion with increasing values of land and consequent higher feed costs. The development was logical and would have continued—a bit slow, perhaps — with absolute certainty. But the war came and almost overnight the whole live stock industry was lifted to first importance. The demands made on the world's live stock have been so tremendous that we are just beginning to see what has happened and to appreciate the part live stock has played in the winning of the war. It has met every demand as best it could but at terrific costs.

According to the most recent figures issued by the food administration European herds and flocks have decreased 100,000,000 head. Belgium, Serbia and Rumania are practically exhausted of live stock resources. The Allies have decreased their live stock holdings by 45,787,000 head, while the Germans admit a decrease of 18,000,000 head — about one-third their normal supply.

Neutral nations show a reduction of nearly 1,500,000. The decrease in Austria, Turkey and Russia will increase the total losses to the 100,000,000 mark.

The total number of cattle, sheep and hogs in this country is 187,000,000 according to best estimates. Therefore it appears that Europe has already lost more than half as many meat animals as there are in the United States.

The war is not over, but if it ended tomorrow we would continue to feed Europe. Europe will look to this country until conditions somewhere near normal can be established—a question of years, at least. Not only will we be called on to furnish meat products, but there is not the slightest doubt but that we will be drawn on heavily, in the rebuilding of their herds and flocks. Such a statement is not a hazy prophecy—it is cold fact. There is no other source to which Europe can turn for seed stock. Not only will Europe be our customer but South American countries have already entered our markets.

What then of the future of pure bred live stock? No definite answer can be given the question but if a careful survey of the situation is made it would seem that the producer of any kind of live stock can find a basis for faith in the future of the industry.

The demand for better sires for use in our own herds and flocks is devel-

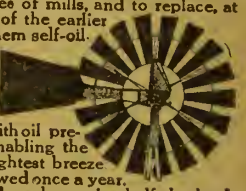
THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load.



We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

oping rapidly and is reflected in the sale reports. Men know more about the business of production than ever. War conditions have forced them to consider the question of costs and they have learned the value of better blood. They know too, that this country must feed Europe for years after the war. With an assured demand for meat products the producers who have learned the lesson of good blood will furnish an outlet for all our surplus breeding animals, but he will find Europe, South America and Mexico competing against him.

As yet no real definite forecast can be made as to just how heavy the European demand will be—but there is not a man familiar with the situation who does not look with confidence to the future and who does not feel that the demand will touch all breeds of live stock.

It is not the writer's intention to urge that all our readers should enter the live stock game. Not every man can make a success with live stock. It is a business that requires intelligence, capital, hard work and a real love for the work in hand. For the man who can qualify the foregoing should furnish a basis for faith in the future.

A Pure-Feed Law Needed

California has the reputation of being one of the most progressive states of the union. It is perhaps true that this state has more progressive legislation in force than any other state. Our recent legislatures have shown a courage and a vision that is highly commendable, but there is one essential piece of legislation that we lack, a pure-feed law.

The need of such a law has been apparent for years. Other states have gone ahead of California on this question, and the time has come when the live stock interests of this state should demand that they be given the protection that such a law affords. Briefly the purpose of a pure-feed law is to require that all stock feeds offered for sale within the state be sold for just what these feeds are. In other words, a true statement of what each feed is, together with the analysis, must be attached to the sack or package. And a suitable penalty is provided for misbranding. Under such a law the buyer is protected against an inferior product. Obviously, the manufacturer of honest goods will not object to the operation of such a law. Only the manufacturer or dealer handling inferior or dishonestly branded feed would suffer. That there is need for such a law is evidenced by the fact that such a law was defeated in the legislature two years ago. Who brought about the defeat? The honest manufacturer? Hardly. The bill was killed because manufacturers of feeds that would not sell on their merits fought it. Consequently, California live stock interests have been at the mercy of these crooked manufacturers, and this state has been a dumping ground for feeds that could not be sold in states protected by a pure-feed law. Under existing conditions the buyer of stock feeds has no means of knowing what is in the sack , the chemical analysis or the feeding value.

Certainly such a law has long been needed. But there never was a time when legislation along this line was needed as badly as now, for the reason that there never was a time when so much mixed and prepared feeds were offered. Such a law would have saved a good many thousand dollars the past year.

But it is to the future we must look. Are the live stock interests willing to continue buying feeds without knowing what they are paying for? It is entirely up to the feeders. They can have the protection of a pure feed law if they want it.

There will be a bill, incorporating all the best provisions of the most successful feed laws of other states, introduced in the legislature this winter. The various live stock organizations are lining up behind it, but in order to insure its passage it will be necessary that every man interested in the live stock business support it.

See your representative and your senator, tell them that when this bill comes up you will expect their support. Explain to them the importance of enacting this legislation and then keep after them until the bill becomes a law.

The California Shorthorn Breeders' Sale at San Francisco Show

David J. Stollery, secretary of the California Shorthorn Breeders' Association, states that the consignment sale of Shorthorns, sponsored by that association, to be held during the California International Show at San Francisco, will afford an excellent opportunity for prospective buyers of Shorthorns to make selections from the leading herds of the state.

Thirty head of bulls and 20 females of different ages have been consigned. For the most part the sale will consist of Scotch cattle, representing the most desirable families. It might be well to state that for the past several years our Coast breeders have been quietly laying the foundations for herds that will, in every way, be a credit to this state. Some of the best bred Shorthorns the breed affords are now owned in California and much of this blood will be available in this sale. Another point that prospective buyers should keep in mind is this: Whatever they pay for this sale offering, they can feel certain that for the same animal in an Eastern sale a much higher price would be paid.

The character of the consignors is a guarantee of quality and reliability. Those who are contributing to the sale are: Hopland Stock Farm, Hopland; T. T. Miller, Los Angeles; Paicines Ranch Co., Paicines; T. S. Glide, Davis; W. M. Carruthers, Live Oak; Ormondale Farm, Redwood City; University Farm, Davis; Roselawn Farm, Woodland; Pacheco Cattle Co., Hollister; Jack London Ranch, Glen Ellen, and Chas. A. Trosi, Vinton.

Sues Imperial Valley Milk Association

The Milk Producers' Association, together with Harris Weinstock, state market director, and J. M. Henderson, Jr., were defendants in a test suit brought by Minnie Edwards of Holtville. The charge is conspiracy to violate the state anti-trust law and was brought to test the validity of the clause in the association's contract with members in which they are required to deliver their dairy products exclusively to the association.

The association was formed last spring with a membership embracing 90 per cent of the dairymen in the county. Only one creamery was able to remain in business and it appears that this creamery has been paying a higher price for butter fat than members of the association were receiving. This fact caused dissatisfaction among the members with the result that legal proceedings were instituted.

HOGS SOLD WELL AT HANFORD

The semi-annual consignment sale held by the Kings County Poland-China Swine Breeders' Association at Hanford October 9 resulted in the very satisfactory average of $90 on the eighty head sold. Hadley's Queen, consigned by W. L. Hagg & Son, Hanford, and purchased by Chas. A. Vaughn, topped the sale at $265.

Those who consigned to the sale were: M. Bassett, A. L. Bassett, W. Bernstein, John Bernstein, Dr. A. J. Crashaw, W. L. Hagg & Son, W. S. Hubbard & Son, H. D. McCune, Dimmick Bros., C. G. De Radd, E. G. Myer, F. D. Ross, Trewhitt Bros. and C. A. Vaughn.

Closing Out
DUROCS

Owing to ill health and scarcity of labor I am offering my entire herd of Durocs for sale, consisting of 13 tried sows, 8 fall yearling gilts, not bred, 2 bred gilts, 42 March gilts, 3 March boars, 2 aged boars, one yearling boar and 10 July pigs. These are all high class hogs, smooth easy feeders, and either registered or eligible to register. Many are high prize winners at the different fairs of the state. Any one who can handle the entire lot can get them for little advance on the market price.

HEREFORD AND SHORTHORN BULLS

Owing to the fact that a number of Western shows have been called off, I have decided to offer for sale a number of Shorthorn and Hereford bulls from my show herds. I have bulls of either breed that in point of breeding, individuality and quality are suitable to head first class herds. Here is an opportunity to select excellent bull material representing the choicest breeding to be found in the Middle West.

HEREFORDS

Seven junior and senior yearlings and two year olds, representing the blood of Perfection Fairfax, Disturber 4th, Beau Perfection, Beau Blanchard, and Bonnie Brae 3rd. These bulls have the size, bone and quality demanded by Western breeders, and the breeding back of them insures that they will give a good account of themselves in the breeding herd.

SHORTHORNS

Among the Shorthorns are a number of real herd bull prospects. Cumberland's Goods, a roan two year old son of Royal Cumberland 3rd is a very attractive prospect. The younger bulls are: Eminent's Dale by Matchless Dale, a son of Avondale, and out of a Butterfly dam. Royal Sultan by Sultan Mist. Golden Champion by Village Champion. Orange Fragrance by King's Choice.

I will be at the Liberty Fair and the San Francisco International and will be glad to meet all California cattlemen.

WILLIAN HENN

Kansas City, Mo.

Fred Hartsook RANCH

Lankershim, Cal.

ANNOUNCEMENT

During the past two years I have been engaged in laying the foundation for high class herds of Holstein cattle, Poland-China hogs and Toggenburg milk goats. In making my selections I have held closely to the highest standards of breed excellence. I have at no time permitted mere pedigree to influence my choice.

All who have inspected my herds have remarked on the uniformity, size and constitution noted. As to the lines of breeding represented there can be no improvement. It is with a real sense of pride that I make this initial announcement and I trust that all who are interested will visit my ranch and inspect my herds. My prices will be found very reasonable and I guarantee satisfaction.

HOLSTEINS:

I have recently put at the head of my herd one of the strongest bred bulls in the West, **Finderne Pieterje Fayne, Jr.** This bull is sired by **Finderne Pieterje Fayne,** who has over thirty 30-pound daughters. His dam has a record for 30 days of 133 pounds and his grand dam was world's record junior three year old.

Among the herd cows are daughters of Prince Gelsche Walker Korndyke, Juliana King of Rock, Allenvail Cornucopia Paul, Pietertje De Kol Alka Peterbas, Sir Johanna Aggie Lad, Woodcroft Sir Beets, Segis Sarcastic, and other prominent sires. Eighteen of my cows have been officially tested and hold records from 22 pounds to 26 pounds.

Choice Bull Calf for Sale

I am offering for sale a six months old calf sired by King Segis Pontiac Jannek, and out of a dam with a 22 pound record, made two months after calving. This calf is well grown, nicely marked and a good individual. He is being priced worth the money.

POLAND CHINAS:

My herd is headed by the noted boar, **I. B. A. Wonder,** reserve grand champion at the P. P. I. E. and at Sacramento, 1918. He is not only a remarkable show boar but a proven sire of first rank. My brood sows represent one of the choicest collections of breed, combining to remarkable degree, extreme size and quality. **Big Knox Girl,** reserve grand champion at Sacramento, is conceded to be the largest sow ever shown in the state. I have others of the same kind and the blood lines they carry represent the most popular and desirable breeding.

TOGGENBURG GOATS:

At present the herd numbers about 30 head of pure bred and high grade does, and is headed by the buck, Brigham Young, used in the University of California herd. That this buck is a producing sire is evidenced by the fact that his daughters are producing nearly 30 per cent more than their dams. I have recently added the Riverside champion doe and several other prize winners.

The Farm Labor Situation

By J. P. Dargitz

The labor situation as far as the farming interests are concerned seems to be at present reasonably good throughout all sections of the state except the Imperial Valley.

The walnut harvesting is in a position to utilize many more women and children and also men incapacitated for heavy labor. Probably Ventura and Orange Counties are mostly affected this way.

We would urge advising the walnut people especially to endeavor to employ women and children in their work and discourage as far as possible the employment of able bodied Mexicans or other man power. This will allow such labor to work in the beet fields and other work which can hardly be done by women or physically disabled men.

We are pleased to note that in Santa Ana the United States employment service representative induced some tomato growers to employ a contingent of the woman's land army for picking tomatoes in the field, and from the growers' report that the women did excellent work, picking more tomatoes than the Mexicans who had been previously employed. This is a source of labor that should be utilized more and more.

Mexican Farm Labor

Alien Mexican laborers can now be imported for agricultural work when necessary. If you feel the need of more farm labor, you should take the following steps:

Try to get the same in your own neighborhood. If you can not do this, then make application to the nearest free state employment bureau, or to the nearest United States employment service bureau.

If you do not know where these bureaus are, ask us and we will help you.

Failing in getting help through these channels, we will then ask the United States employment service for permission to import them for you.

In some cases we can furnish you with alien laborers who have finished some previous job in this state and are now available.

In every case advise how many men you need, the kind of work, the housing accommodations you have for the men, whether you can board the men or if they will be expected to board themselves, how long you will want them and what you will pay, contract or by the hour.

The imported men must be paid the going wage for similar labor in the community where employed, must be furnished living quarters of a sanitary character, fuel and water free; railroad tickets and living expenses must be advanced by the employer and withheld from wages, but if any have not worked out these advances when you are through with them, then we will undertake to place the men elsewhere and secure any such deficiency for you as an advance from the new employer.

Be particular to give full information as above and save time. Three weeks should be allowed us to get your help imported—more time is better.

Every imported man must be accounted for by you through us to the government. We are here to help you.

For further information address: J. P. Dargitz, Field Representative Public Employment Bureaus, Sacramento, California.

HENN'S SHORTHORNS AND HEREFORDS

William Henn of Kansas City, Missouri, has his Shorthorns and Herefords at Exposition Park, Los Angeles, waiting for the Liberty Fair to open. It takes nerve to bring out a show herd from the Middle West these times, but no one ever accused Mr. Henn of lacking nerve—at any rate, not since he successfully invaded the tick country a few years ago. However, Mr. Henn says he would rather brave the tick than the "flu." He came West expecting to make all the Western shows, but since the epidemic broke out all the shows have either been called off or postponed. For that reason Mr. Henn has decided to sell a few Shorthorn and Hereford bulls at private treaty. The bulls offered are either junior or senior yearlings or two year olds. Several of them are good herd bull prospects and a few are the kind that will attract the range man.

Among the Herefords, the two year old, Beau Banner 5th, is a very pleasing sort. Two grandsons of Perfection Fairfax are in offer, both are sired by General Fairfax. Two other attractive bulls are Beau Blanchard 51st, by Beau Blanchard and Disturber 11th by Disturber 4th.

Among the Shorthorns is the roan, Cumberland's Goods. This bull was grand champion at the Wyoming state fair. A younger bull, Eminent Dale, is by Matchless Dale, the bull that has sired more winning Shorthorn steers than any other bull.

NO BERKSHIRE SALE AT LOS ANGELES

W. M. Carruthers, president of the Western Berkshire Congress, states that it has been decided not to hold the sale that was advertised to be held during the Liberty Fair at Los Angeles. Mr. Carruthers says that the consignors have been so handicapped by a shortage of labor that they have found it difficult to present the offerings in the condition necessary to meet the high standard set by former congress sales and for this reason it was deemed advisable to abandon the Liberty Sale.

Veterinary Queries

Unsigned communications receive no attention.

Itch

I have a mare that is bothered very much from an itch on her belly and back. She has been getting poor lately and I think it is caused by this itch. What can be done for it?—Subscriber, Bakersfield.

The irritation is probably caused by a small mite in the skin. Soak her all over with a solution of zenoleum. Use a teacup of the zenoleum to a bucket of warm water and do not miss a spot but do not get it in her eyes. Repeat the treatment every four or five days until you have made several applications. It would be better to clip the horse first so you could apply the solution direct to the skin. Fowler's solution of arsenic is good for skin diseases that are not due to mites in the skin. That should be given in ounce doses once a day and continued for three or four weeks. A quart of the solution would be a good amount to get and commence by giving half an ounce once a day for a few days; then one ounce a day until it is nearly all used and finish by giving half an ounce a day for the last few days.

Horse Thin in Flesh

We have a large horse that is very thin in flesh. He eats and drinks well but has been sick for three or four weeks. He seems weak and when he walks he partially drags his hind feet. Below his breast there was a large swelling, but that has spread and extends back on the belly. Please advise us what to do for him.—Subscriber, Chino.

The dragging of the hind legs is probably due only to weakness. You say he eats and drinks well. He probably eats too much. Horses as often grow weak for overeating as from any other cause. Feed him regularly but not too much. Get four ounces of the tincture of iron and every morning give him half an ounce of it in a pint of water as a drench. Also get these powders: Four ounces of nitrate of potash, two ounces of bicarbonate of soda, four ounces of powdered gentian, two ounces of powdered nux vomica and eight ounces of farina. Mix well and give a tablespoon of the mixture in the feed twice a day.

Believe Cattle Should be Sold by Grade

Written for California Cultivator by A. L. Spellmeyer

The high price of feed has resulted in a forced slaughter of cattle. While most of these cattle were fat, they lacked the high finish formerly demanded in a beef steer. A number of us, all in the stock business, were discussing the difference between the cattle market in California and the markets of the East. The big difference is that the California market operates on a one-price system, paying the same for any steer of any grade, if fat, whereas the Eastern market grades the steers and provides a margin between the top and bottom averaging around six cents.

I contend that the system and custom of California packers did not encourage live stock improvement, proper feeding or baby beef production. I also contended that the one price paid was based upon the lowest possible price they could pay and still prevent the shipment of cattle East, and that even so, there have been times when the California feeders have been able to stand the tremendous shrink incident to the ten-day trip to the Kansas City market, pay the high feed and freight bills and net more than was offered at home.

A former buyer for the packers argued that the California system was a better plan than Eastern system based on grades. He gave it as his opinion that the time would soon come when the highly finished steer would not be seen on the market. He insisted that so much good meat was worth just so much money, whether it was from a Holstein steer or from the best baby beef. He held that the extra finish and fat could only be put on by heavy feeding and that as a matter of fact the actual quantity of meat was not increased, nor was the quality improved, but that the increased weight was practically all fat put on at an unreasonable cost. He further believed that constructive breeding should aim to produce heavier cattle at the same age, rather than to make quality the basis for a higher selling price.

There is much to be said on both sides of such an argument, but for the encouragement of better stock, I favor a price based on quality.

A GREAT CATTLE SHOW AT SAN FRANCISCO

A preliminary list of beef cattle exhibitors, issued by the management of the California International Live Stock Show, to be held in San Francisco November 16-24, includes practically all the leading establishments of this state, and in addition many well known herds from other western states have made entries. The list of exhibitors announced follows:

Shorthorns—T. T. Miller, Los Angeles; Maxwell-Miller Cattle Co., Steamboat Springs, Colorado; J. H. Rossiter, Burke, California; Ormondale Co., Redwood City; Pacheco Cattle Co., Hollister; Roselawn Stock Farm, Woodland; University of California, Davis; Thos. B. Dibble, Santa Barbara; Jack London Ranch, Glen Ellen; T. S. Glide, Davis; W. M. Carruthers, Live Oak; Hopland Stock Farm, Hopland.

Herefords — John S. Painter & Sons, Roggen, Colorado; Hereford Corporation of Wyoming, Cheyenne, Wyoming; H. M. Barngrover, San Jose; W. D. Duke, Likely; J. A. Bunting, Mission San Jose; J. H. Cazier & Sons, Wells, Nevada; Chas. Rule, Jenner; University of California, Davis; Curtice Land Co., Calgary Alta; A. B. Cook, Helena, Montana.

Aberdeen-Angus — Congdon & Battles, North Yakima, Washington.

HOG PRICES TO CONTINUE

In a recent communication to Dean F. B. Mumford of the University of Missouri college of agriculture, who is food administrator for Missouri, Herbert Hoover states that prices for hogs farrowed this fall are not expected to be less than present prices. Mr. Hoover says:

"So far as we are able we will continue the assurance of a minimum $15.50 per hundred for average of packers' droves at Chicago for hogs farrowed this fall. We can reconsider the outlook in a few months as to the extension of this again to spring farrowing. I have little doubt that we will be able to continue. I do want it made clear in all these matters of price influence by the government that this is not a guarantee—it is a policy, and this policy will only be defeated by some unlooked for interruption in distribution, transportation or consumption—a risk of war we must all take."

JERSEYS

THE Jersey is an investment breed, not a luxury. They are noted as money-makers. They do not have to be pampered. They do equally well in Southern Texas and the Canadian Northwest. One Jersey will prove to you that you must have a herd. Write Dealers for prices and pedigrees. Send to us for important facts about Jerseys.

Holsteins Are Not Fussy

The Holstein cow is not a dainty creature as far as her appetite is concerned. Just head her up to rack full of not too good alfalfa hay and she manages to convert it into the finest milk and butter fat in the world—yes she will even eat that black, spoiled looking alfalfa that is so plentiful in California right now. And if by chance she can have a little of that $40.00 per ton barley to go along with it, why bless your soul, she responds as gratefully in production as though she expected nothing better.

You have the hay, perhaps some of it is black, and possibly you have some $40.00 barley, and to connect them up with the right kind of registerel Holstein cows and heifers come to

THE FIRST TULARE SALE
Tulare, California
November 20-21, 1918

when a total of 125 head consigned by ten consignors will be sold without reserve or limit to the highest bidder at public auction.

There will be cows and heifers with official records up to over 26 pounds butter in seven days.

Cows and heifers out of dams with official records up to over 31 pounds butter in seven days.

Daughters of such splendid sires as King Korndyke Sadie Vale; King Korndyke Sadie Vale 22nd; King Korndyke Sadie Vale 27th; Prince Gelsche Walker; King Mead of Riverside; King Korndyke Pontiac; Spring Farm King; King Segis Pontiac Jannek; Merci Lad Korndyke Burke; King Segis Pontiac; Spring Farm King Pontiac 5th; Sir Aaggie De Kol Acme; Sir Skylark Ormsby Hengerveld; King Segis Lad; It State Bells; Finderne Pride Johanna Korndyke; Beauty Pietertje Butter King, Jr., Arcady Pontiac Wayne Hengerveld; Fidessa Thorn; Sir Veeman Korndyke Pontiac; Segis Pontiac De Kol Burke Luit; Mutual Fobes Longfield De Kol; Judge Hengerveld De Kol 6th; and others of notable breeding.

And the Females Are Bred

to the largest number of high record sires ever represented as reference sires in a western sale, including two bulls out of 40 pound dams, one out of a 36 pound dam, three out of 35 pound dams, one out of a 32 pound dam, and two out of 30 pound dams, besides several of exceptional yearly record backing.

THREE BULLS OUT OF 30 TO 31 POUND DAMS, one out of a 29 pound dam, one out of a 28 pound dam, a son of It out of a 27 pound four year old daughter of King of the Pontiacs, a son of King Mead of Riverside out of a daughter of Ignaro De Kol that made over 29,000 pounds milk and 1077 pounds butter in one year, head a list of bulls that should attract the attention of dairymen and breeders throughout the entire west.

Field Notes from the Live Stock Men

Hartsook Buys Promising Bull

Fred Hartsook, Lankershim, California, whose recent purchase of Poland-China hogs and Holstein cattle have put his herds at once in the front ranks, has just received an eleven-months-old bull calf from John L. Smith of Spokane, Washington. This youngster, Finderne Pieterje Fayne Jr., is one of the strongest bred calves brought to this state. He was sired by Finderne Pieterje Fayne 98104, a bull with 30 30-pound daughters, and his dam is Bonnie Lass Pauline, a 133 pound 30-day cow that was third in class at the National in Chicago. His paternal grand dam was the world record junior three year old. His sister was grand champion at the Chicago National and grand champion at the P. P. I. E.

It is rumored that several Los Angeles breeders are forming a company to purchase a part interest in this bull.

McFarland Ayrshires Go East

E. B. McFarland, San Mateo, reports the sale of seveuteen head of Ayrshires to the Gossard Breeding Estates, Martinsville, Indiana. Included in the lot was a young bull for which Mr. McFarland had refused an offer of $2500.

High Prices for Toggenburgs

During the fair at Riverside L. C. Buhl, Upland, sold three Toggenburg yearling does to Fred Hartsook, Lankershim. Included in the sale was the champion, Melbaline 1975 and the price paid for three was $1500. Mr. Hartsook also purchased two yearling Toggenburg does from S. L. Gregg, Redlands.

Decline in Stock on Farms

On about 5000 representative farms scattered throughout the United States, reporting to the Bureau of Crop Estimates, the decline in the number of cattle was 0.8 per cent from last July 1 to August 1, 2.9 per cent in hogs, and 3.3 per cent in sheep.

High Prices for Geldings

It is reported that in England third-class draft geldings sold from 90 to 120 guineas—$450 to $600. In France prices of $600 to $1000 are not rare.

Death of Woodford

The Hereford bull Woodford, head of the Hereford Farms herd, owned by E. H. Taylor of Frankfort, Kentucky, was burned to death in a fire that destroyed one of the barns at that famous farm. Woodford was conceded to be one of the truly great bulls of the breed. An offer of $50,000 was refused for him last year.

McFarland Hog Auction

At the recent auction sale of hogs held at McFarland under the management of the Tri-County Marketing Association, 233 head sold for $8457.25. The price paid was $17.50 per hundred.

Releases Straw

The federal live stock commission of the food administration has issued a statement to the effect that it will not be necessary for farmers to continue the conservation of straw for feeding purposes.

First Exportation of Percherons

The Percheron Society of America announces that the first exportation of Percherons to cross the Atlantic is on the way to England. For nearly 70 years the best that France produced came to America. The end of the war will find this country and Canada the only sources of supply for Percheron and Belgian breeding stock and that our breeders can look for a broad world market is indicated by the initial shipment to England.

It is interesting to know that the war has served to impress English and Scotch horsemen with the fact that a clean legged horse is more efficient than one sporting a mop of feather.

The English order was filled by George Lane of Alberta and consisted of 26 mares and one stallion.

The National Swine Show

The third National Swine Show was held at Cedar Rapids, Iowa September 30-October 5. About 1300 head of the leading breeds were on exhibit. Hampshires numbered 365, Poland-Chinas 247, Duroc-Jerseys 244, Chester Whites 220, and Berkshires 100 head. The Spotted Poland-Chinas, Tamworth and Yorkshire breeds were also represented. The total number of entries was practically the same as registered at the two preceeding shows.

The principal awards were: Poland-Chinas; senior grand champion boar, Black Prince, W. J. Graham, Howard Lake, Minnesota; junior champion boar, Expansion King, V. E. Robinson, Morton, Illinois; Senior and grand champion sow, Josephine 1st, Chas. E. Lyden, Manning, Iowa; junior champion, Liberty Girl, M. C. Brown & Sons, Martinsville, Ohio. Duroc-Jerseys; senior and grand champion boar, Great Orion, E. M. Kern, Stanton, Nebraska; junior champion boar, P. C. Orion King, Pine Crest Farm and Jackson, Charleston, Mississippi; senior champion sow, Long Gano, E. M. Kern; junior and grand champion sow, P. C. Orion Lady A., Pine Crest Farm and Jackson.

Chester White; senior and grand champion boar, Wildwood Prince Jr., Maurice F. Black, Scribner, Nebraska; junior champion boar, William 4th, W. T. Barr, Ames, Iowa; senior and grand champion sow, Miss Lenora 4th, W. T. Barr; junior champion sow, Sept. Lass 1st, H. A. Derenthal, Wykoff, Minnesota.

Berkshire; senior and grand champion boar, Royal Superbus 4th, W. S. Corsa, Whitehall, Illinois; junior champion boar, Royal Matchless 15th Rodgers Bros., Harrodsburg, Kentucky; senior and grand champion sow, Superb Premier Princess, Piping Brook Farm, Greenwich, Connecticut; junior champion sow, Matchless Beauty 19th, Rodgers Bros.

Hampshires; senior and grand champion boar, De Kalb's King 160th, H. De Kalb, De Kalb, Iowa; junior champion boar, Wickkare Imperial, Wickfield Farms, Cantril, Iowa; senior and grand champion sow, Trixie Lookout, Wickfield Farm; junior champion sow, Hawkeye Lady, Clayton Messenger, Keswick, Iowa.

A $60,000 Jersey Bull

A one-half interest in the yearling Jersey bull, Financial Sensation, has been purchased from the Waterloo Jersey Farm, Waterloo, Iowa, by Greystone Jersey Farm, Inc., West Chester, Pennsylvania, for $30,000. The basis for this price was found in the breeding back of the bull. It is claimed that Financial Sensation carries a greater concentration of the blood of the great cows, Interest, Finance, Financial Countess and Financial Beauty, together with more of the blood of the famous sires, Financial King, Sans Aloi, Financial King's Stockwell and Financial Countess Lad, than any bull of the breed.

University Distributes Sheep

Prof. R. F. Miller of the University of California, cooperating with the farm agents of the state has distributed about 1000 old ewes to farmers who plan to carry small flocks.

The University of California believes that there are thousands of small ranches in the state that can profitably carry a small flock of sheep. Most of the ewes distributed are five or six years old, but are carefully selected and only good, strong, straight fairly good mouth ewes are sent out. The plan is resulting in saving for wool and lamb production ewes that would otherwise be sent to market.

OUTLOOK FOR HOGS

The California hog producer can view the future with considerable assurance this fall. A year ago he faced an unstabilized market and skyrocketing grain prices. Many producers were forced to close out their breeding herds, or at least restrict their operations. The hog feeding game was in a bad way throughout the country, but local conditions placed a heavier handicap on the feeders of this state than was perhaps carried by feeders in other sections.

At best the California markets have been unsatisfactory. The margin between Coast prices and Middle West prices has always seemed too wide. Last winter the live stock commission of the federal food administration for California effected an agreement between the Coast packers in which it

was agreed that the prices paid on Coast markets would not be less than one cent under the food administration minimum effective in the Chicago market. It was further agreed that such a policy would remain in operation "for the period during which similar minimums are in force in the Middle West." This agreement applied to pigs of 1918 farrow.

Quite recently the food administration and the packers, in conference at Chicago, agreed that the October price on that market would be based on a minimum of $18, and that a joint meeting between the packers, growers and the food administration be held at Chicago between October 20 and 25 for the purpose of determining the November minimum. It is assumed that the same plan will be followed in establishing prices for December and subsequent months. It is further stated that the packers have agreed to avoid fluctuations to exceed 50 cents per cwt. weekly.

It would seem, therefore, that the coast markets should follow within one cent of the eastern prices. Such being the case, and with the price of barley around $2.25, hog growers should have no ground for complaint. With finished hogs around $17 to $18 and barley selling at $2.10 to $2.25 the hog business should go forward. Under the condition outlined the hog furnishes a highly satisfactory market for barley.

There is at present no ground for expecting hog prices to go much lower than the present range. The producers responded effectively to the government's plea for increased production, but this increase will be more than absorbed by European and army and navy demands. This country and every European country is on short pork rations now and while the war lasts, and later when peace comes, the demand for pork and pork products will continue. The government is calling for increased production for 1919. Last year California did not register her expected increase, but there were extenuating circumstances—an artificial barley market forced a liquidation. But this year conditions are different. A stabilized market and barley at a price that can be fed should furnish the necessary increase. Therefore every sow should be bred this fall—and bred to a pure bred boar.

Cattle Conditions in Arizona

Written for California Cultivator By A. L. Spellmyer

It may be of interest to know that many thousand cattle are being shipped from the Holbrook, Arizona, vicinity, because of a shortage of winter feed. It is probable that 20,000 head will be moved East and West. The movement is made up very largely of young breeding cows, heifers and calves. Ninety per cent of them are good colored Whitefaces. Most of the steers are sold. Some shipments have gone to Kansas City and some to Colorado. A number of outfits wanted to ship West but either could not find the feed or could not secure releases from local mortgages.

The she-stuff moving now is carrying enough flesh to be taken as canners, and canner prices realized at Kansas City have been mostly under six cents and some under five cents. Figuring freight and shrink it means less than four cents at home. With canned meat retailing at 45 cents per pound the greed of the killer is shown.

In many parts of our range country we see hides on fences, corrals, etc., which cow men will not bring in for present hide prices, which are less than prices four years ago, by ten ten cents per pound. At the same time leather is more than double.

With cattle, on ranges not drouth affected, bringing less than they did four years ago, except on large steers and fat stuff, with expenses doubled, and with breeding stock being sacrificed, the possibility of loans through the war finance corporation will be salvation to many cattlemen.

Many of these men must sell at home or ship to Kansas City. Local banks demand their money and these men have to dig it and haven't the money with which to pay freight or contract feed.

Conditions of this nature are deplored by anyone who understands the need for producing cattle, but a sacrifice is being made right now in Arizona and other states that will require years to overcome.

Old man Shylock had nothing on men whose actions indicate that they do not consider their country or their neighbor. I am not complaining because I am hurt. My ranch is not in the drouth district and I have no loan being called, but it would seem only fair play and good business for the packers to pay the cattlemen a fair profit and allow them to exist. It would also seem that the banks could carry their cattle paper and help their customers hold their stock until some government help can be secured. We must have cattle and our breeding stock must be conserved.

Most of the reported increase of cattle in Arizona is not an actual increase but results from closer counting, reporting, etc. We know California has no over-supply of cattle and will be short when grass comes.

I think a good many of us would welcome control from the new born calf to the meat on the table.

EXAMINATION FOR FOREST RANGERS

An examination for the position of forest ranger (male) will be held on October 28 of this year at Fresno, Los Angeles, Red Bluff and Sacramento. It is hoped that numbers of applicants will present themselves, because the forest service has felt the effects of the two drafts as keenly, probably, as has any private corporation in the state. Exemptions, in this service, are reported to be extremely scarce. Applicants must have reached their twenty-first but not their fortieth birthday. The entrance salary, in this state, is $1100.

THE LIFE OF A TRACTOR

The life of a tractor cannot be properly expressed in years alone. The tractor is a machine, and like all machines, its life depends on the amount of work it does and on the care taken of it.

This life can be shortened by lack of proper care and by abuse in operation. The number of years a tractor will be available for work on a farm, therefore, depends only partly on the hours it will be required to work each year, but if the machine is given proper care, both when idle and when in use, the amount of work done per year will be the principal factor in determining its length of useful life.

The life of a small tractor properly handled and properly taken care of when not in use should be sufficiently long to more than pay for itself and leave its owner a good profit in dollars and cents and in time saved.

THE APPAREL DOESN'T ALWAYS PROCLAIM THE MAN

First Officer (in spasm of jealousy) —"Who's the knock-kneed chap with your sister, old man?"

Second Officer—"My other sister."—Punch.

Negro Sergeant — "When I say ''Bout face!' you place de toe of yo' right foot six inches to de reah of de heel of yo' left foot and jus' ooze aroun'."—Boston Transcript.

BRITAIN RATIONS POULTRY FEED

Great Britain has adopted the rationing of poultry. A daily ration of four ounces per bird will be provided for birds of the best utility breeds up to an aggregate amount of 50,000 tons of feeding stuffs for six months. Although this seems generous, it must be remembered that the birds qualifying for the four-ounce ration are those which, under careful breeding and selection, have reached a high standard of egg production. The rationing scheme reacts to the advantage of the country, because it means the survival of the best fillers of the egg basket.

Owners of hens and pullets hatched since January 1, 1916, and not receiving rations under the four-ounce plan, may obtain certificates entitling them to purchase a specified amount per head per day. This ration is to be fixed from time to time according to the quantity of foodstuffs available. It will, of course, always be less than four ounces.

In order to obtain the special ration of four ounces per day—half grain and half a dry mash—fowls will be classified into first grade and second grade breeding stock. To come within the first category, fowls must be utility breeding stock for egg production or of high utility quality and of pure-bred stock. The standard of health must also be high. For a period of at least two years the stock must have been bred selectively to meet the above requirements.

Second-grade birds, which must be bred from proved layers, will receive rations only after the requirements of the first grade have been satisfied. A fair proportion of the allotted feed will be reserved for the best utility stocks of ducks, turkeys and geese.

This information, received recently by the United States food admnistration, emphasizes the value in war time of well-bred farm poultry, for the British rationing plan practically decrees that hens must lay to live.

The third contest of the All Northwest Egg Laying Contest will begin November 5, 1918, ending November 4, 1919. It will be held at Washington state college, Pullman, under direction of Helen Dow Whitaker.

When a Hen is Sick

Written for California Cultivator By Jean A. Koethen

FALL is the season when various diseases, more or less serious, are likely to appear among chickens. Foggy nights, changeable weather and lowered vitality because of the molt are all contributing causes of sickness, but side by side with them we must put the fact that the two worst scourges among poultry diseases, roup and chicken pox, are distinctly fall diseases. Roup is not as prevalent in Southern California as in climates where there is more rain, but our climate, "poultry paradise" as it has been called, is just the climate chicken-pox likes, and we are already beginning to hear of outbreaks in some sections. Then there are other diseases of damp weather, such as rheumatism, bronchitis, and the ordinary cold which is not bad enough to be called roup, but which nevertheless demands attention. Another disease one hears of now and then, not peculiar to fall, though it may develop more rapidly then, is tuberculosis, or what is commonly called "going light." I do not care to speak here of the occasional and sporadic diseases which take a hen now and then out of the flock, such as poisoning and digestive ailments, but will confine myself to those which are apt to be epidemic.

The first thing to do when a hen is sick is to find out what ails her. This is not nearly so difficult as it sounds. Every epidemic disease has its unmistakable symptoms. Digestive diseases are harder to diagnose. It is difficult sometimes to determine whether a hen has indigestion or an overworked liver, but roup and chicken-pox are unmistakable in their most casual appearance.

When a hen acts droopy, look first at her head. If there is a discharge from the nostrils, swelling about the eyes, or they are stuck together, she has some sort of a cold. It may be merely catarrh, and again it may be roup. Take her away from the rest of the flock, at any rate. If there are sores or scabs of any sort on head or comb or wattles, better call it chicken-pox and be done with it. Sometimes cases of chicken-pox have roupy symptoms—in fact, there seems to be some question among authorities whether roup and chicken-pox are not essentially the same disease. As long as there are only the sores or nodules on the head the birds do not appear very ill, and usually recover inside of three weeks. When the disease takes on a roupy character as well, the eyes are often affected, sometimes being stuck tight so that the bird can not see to eat, when death is likely to ensue from starvation. Sometimes the disease reaches the mouth and throat, when it is even more serious.

Tuberculosis has two symptoms, but they do not always appear in the same bird. There is always what is called "going light." The bird gets thinner and thinner, without apparent reason, until it finally dies. Very often lameness is connected with tuberculosis, but not always. When a hen goes lame, lift her. If this does not satisfy you, weigh her. If she is greatly under weight as well as lame, tuberculosis is to be suspected. If she is fat, her lameness is due to rheumatism. An experienced poultrywoman on whom I called recently, told me neighbors of hers were troubled with their chickens "going light," but laid it to worms. There need be no confusion in such a case, for if there are worms they may always be found by examination of the droppings. If worms are not seen do not doctor for them.

Having determined what ails the sick fowl, the next question is, what caused the illness. We can do little toward a cure until we do know the cause, for the cause must be removed before a permanent cure is possible. Especially is this true in the case of roup. When damp or chilly weather is often apparently responsible for outbreaks of this disease, the poultry house must be examined for the real cause. Are the birds getting fresh air at night? Go to their house after dark and see. Naturally, the air of no poultry house can be free from odor, but there is a difference between the foul odor of a crowded house in which there is only a little oxygen for a good many hens and a well ventilated house where the number of hens is so small and the circulation of air so sufficient that each hen has reasonably fresh air. The more closely crowded the house the more ample must be the provision for ventilation. Hens that breathe fresh air at night are not likely to have roup. If they do, the cause must be looked for elsewhere. If the house is on low ground with higher ground near, it may be water has run down into the yards or house and has been allowed to remain there. After a rain a dirt floor is often damp, and extra circulation of air must be provided to prevent the gathering of mold. Rain dripping through a leaky roof or damp winds blowing through a neglected crack have often brought on colds, sometimes bronchitis and sometimes roup. See to it that the hens have dry quarters and fresh air and there will be a minimum of roup and colds.

Chicken-pox, on the other hand, is an infectious disease, and always comes from a germ somewhere. It may have been brought from a distant hennery on the clothing or shoes of the caretaker. It may have come on the person of a casual visitor. It may have been brought by birds. It may be in the houses and nowhere else. There is no more frequent cause of infection than this. Once chicken-pox has invaded a flock, it will occur again and again, succeeding years, unless the germs are eradicated by the vigorous use of boiling water and other germicides. Every inch of the walls of the houses, every nest box, every trough and fountain, must be thoroughly cleaned and disinfected if the ranch is to be hereafter free from this unpleasant visitor.

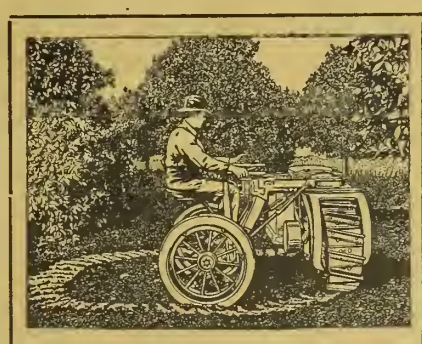
I have left the matter of treatment till the last because it is far less important than prevention. If you can not get rid of the cause of disease, doctoring is not worth much. Especially is this true of roup. "I gave up doctoring roup years ago," wrote an eminent poultryman, "because I found that as long as I doctored roup I continued to have more roup." What he meant was this, I think, that if the bird that has once had roup is cured and left in the flock it will breed roupy chicks as long as it lives, and they in turn will pass the tendency on to their descendants. If the roupy bird can be cured and marked so that it can never be used as a breeder, no great harm can result from keeping it, though it will not be a very valuable member of the flock, because its vigor is impaired. Chicken pox can be relieved and its duration shortened by the use of remedies. Indeed, Dr. Sanborn goes farther than this, and says that in many cases birds that have not already contracted the disease can be prevented from taking it by treatment.

For roup there are many remedies, but none better than the one so often mentioned in these columns, potassium permanganate, not in the form of "pink tea" administered internally, but used as an antiseptic wash. Into a lard pail or quart cup of warmish water drop permanganate crystals till the water is purple. A few crystals are sufficient. Into this dip the head of the affected bird and hold it there as long as you dare. I say this because the directions usually given say from 20 to 30 seconds and this is a long time to keep a chicken's or turkey's head under water. I prefer to let him come up to breathe between times. This treatment twice a day will cure most cases. For those it does not reach the ax is as good as anything.

For chicken-pox Dr. Sanborn used to recommend calcium sulphide in one-grain daily dose, but he now prefers flour of sulphur, mixed in the dry mash in the proportion of about 5 per cent of the whole mash, and kept before the whole flock till the epidemic has abated. Other experts advise the removal of the scabs on the afflicted birds and the treating of the raw sores with a 2 per cent solution of creolin, afterward dusting with iodoform. One such treatment may be followed by daily greasing with vaseline or lard.

Get the TrackPULL Book

Tells Why 6 H.P. Bean Tractor is Best for Orchards and Vineyards



No other tractor meets all the special needs for which the Bean TrackPULL was designed.

Send coupon for free book which tells all the reasons why orchardists and vineyardists particularly need the Bean TrackPULL Tractor.

The makers of the TrackPULL have been manufacturing orchard machinery for 34 years. They long ago saw the special need for special tractors to use in orchards and vineyards. They used their special knowledge and experience to design a tractor that would fit those needs exactly. No other machine can do what the TrackPULL does because no other is so designed. Don't make a mistake on tractors. Bean TrackPULL operates through single track which does both the pulling and steering. Pulls, "gees," "haws," and backs just like a team. Same power on turns as on straight-away. No over-loading one side, no pivoting, no uneven pulling when tools are hitched off center. Hitch them way off center—getting up close to trees and vines—pulls just as well. Twelve year-old boys can handle.

Valuable improvements in Motor, Track Rollers, Drive Sprocket, Bearings and Rear Wheels make the 1919 Model Bean the most efficient orchard and vineyard tractor manufactured. Costs nothing and doesn't obligate you, to investigate fully before you sign up for any other make. Write us now for the TrackPULL BOOK. We'll tell you name of nearest agent who can show the Bean. Let him save you money.

A SNEAK OF A MAN

Somebody poisoned my dog today,
Though he never did anyone ill,
And so he is through with his canine play
And his waggy tail is still.
No more will I walk in the fields with him
Along at my side to jog,
And I don't care if my eyes are dim—
Somebody poisoned my dog!

He was homely. I know, as a dog could be,
And only a mongrel, too;
But I loved the old fellow and he loved me,
As people and dogs may do.
Nothing on earth could disturb his trust
Or his love and his faith befog,
And now he lies here at my feet, in the dust—
Somebody poisoned my dog!

He crawled to my side and licked my hand,
And then with a gasp he died;
And—though some people can't understand—
I patted his head—and cried!
For it isn't funny to lose a friend
From off of this earthly cog,
And he was loyal unto the end—
Somebody poisoned my dog!

I wonder how anyone could have done
This poor little fellow harm;
But here he lies—his race is run—
Though his body's still soft and warm,
My life is lived on a peaceful plan,
My pace is a quiet jog,
But—I wish I could find the snake of a man
That poisoned my little dog.
—Skaneateles Democrat.

THE SINKING OF THE OTRANTO

ONE of the most tragic happenings of the war was the recent sinking of the Otranto, an American troopship, in the North Channel between the Scotch and Irish coasts. No more thrilling tale of cool heroism has come over the cable. We quote from the press dispatch:

The Otranto, after the collision with the steamer Kashmir, was dashed to pieces on the rocks off the north Scottish coast with a probable loss of 372 American soldiers.

Three hundred and one men were taken to Belfast by the British destroyer Mounsey, the only vessel which made an attempt at rescue in the terrific gale when the Kashmir, another vessel in the convoy with the Otranto, rammed the Otranto amidships.

Seventeen men were picked up alive on the Scottish coast.

Of the 699 American soldiers on board the Otranto, 310 were landed. Seventeen were rescued alive at Islay, leaving 372 unaccounted for.

The Otranto and the other vessels of the convoy were battling with the heavy seas and high winds Sunday morning. The storm was so severe and the visibility so bad that the Kashmir, a former Peninsular and Oriental liner, crashed into the Otranto squarely amidships.

The Kashmir backed away badly damaged, but was able to make port.

As the bows of the Kashmir were pulled from the great hole in the side of the Otranto, the water rushed in, but for a time it did not serve to stop the engines. The Otranto tried to proceed, but made no headway against the gale in her crippled condition.

Within a short time the water put out her fires and the Otranto drifted helplessly toward the rocky coast of Islay Island, where most of the Tuscania victims met their deaths.

The Otranto struck the rocks Sunday night south of Saligo Bay, Islay Island, an uninhabited section, where the coast line in many places rises straight out of the water to the rocky peaks many feet above.

Thirty minutes after the crash the British destroyer Mounsey, herself damaged by the heavy seas, appeared out of the haze in answer to the distress calls of the Otranto. When the destroyer maneuvered to get alongside Captain Davidson of the Otranto warned Lieutenant Craven, commanding the destroyer, not to make the attempt.

When it was seen that Craven would make the attempt anyway, the men were ordered to remove their shoes and heavy clothing and try to save themselves as best they could.

The destroyer stood off about a hundred feet and then gradually came nearer, against the great odds of high waves and the wind, which threatened momentarily to carry her entirely away from the Otranto or dash her to pieces against the side of the wounded vessel.

As the destroyer steered toward the side of the steamer many of the men leaped too quickly and missed their reckoning and dropped between the boats. Some of these disappeared in the water, but others of them were caught and crushed to death between the boats and the lifeboats, which had been lowered to act as buffers. The destroyer was badly battered.

The captain of the destroyer, each time it was brushed away from the side of the Otranto, again would push near enough for many more men to jump to the deck of his vessel. He described as a veritable rain the number of men landing on the destroyer.

Many of those who reached the decks of the vessels suffered broken bones or otherwise were hurt. Those who missed the deck of the destroyer went to almost instant death.

Four times the battered destroyer came alongside and each time the previous scenes were repeated. At the end of the fourth trip she had 310 Americans, 236 of the crew, 30 sailors and one British officer on board. The bow was full, and, having done all possible, she started for port.

The survivors saw the Otranto drifting helplessly toward the rocks as they pulled away toward the Irish coast. The destroyer barely had time to send a brief message when her wireless was carried away. The little overloaded vessel had a rough trip to port.

One of the American soldiers on board the Otranto pictured the scene when the vessels collided. Soldiers lined the decks as though on parade and at the word of command stood at attention like statues. They never wavered, remaining there in military formation, exemplifying during the crisis the noblest traditions of the army for heroism and discipline. The same thing, said the soldier, applied to the seamen.

Number of bodies today were being washed up rapidly on the shore. It was reported that 175 had been counted at noon, and nearly all of them had been identified.

A seaman on the Otranto described the most tragic moment of the disaster as that when the order came for the men to jump and save themselves. The destroyer looked like a very small boat alongside the former Orient liner and many landsmen among the American troops thought themselves safer aboard the larger vessel. This was fatal to many of them.

The victims are to be collected at the most suitable place and buried there. A boat left Liverpool today with material for coffins, fifty laborers and carpenters and chaplains to conduct the funerals. The grave of every man will be marked and charted.

There were a few cases among the dead where identification was delayed. Every man had worn an identification tag on his wrist or neck, but in some instances these were torn off, and it was necessary to take finger prints of the men.

An instance of the many rescues by the Mounsey was that of T. L. Campbell, a Memphis lawyer and a secretary of the Y. M. C. A. He weighs 220 pounds. He was perched on the Otranto's rail awaiting a chance to

The Cultivator Patterns

9011—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The overblouse slips on over the head and the ends are extended under each arm to form a sash.

9014—Ladies' Surplice Waist. Cut in sizes 36, 38, 40, 42 and 44 inches hust measure. The back of the waist extends over the shoulders and the fronts are gathered.

9035—Children's Bishop Dress. Cut in sizes ½, 1, 2, 3 and 5 years. The high round neck with the turnover collar or the low round neck without the collar may he used.

9027—Misses' and Small Women's Dress. Cut in sizes 14, 16, 18 and 20 years. The neck is cut in V-shape and a sailor collar of contrasting material is the girlish finish.

9019—Ladies' One Piece Apron. Cut in sizes 36, 40 and 44 inches hust measure. The apron is cut in kimona style and widens out on the shoulders to form rippling sleeve caps.

9015—Child's One Piece Box Plaited Dress. Cut in sizes 2, 4, 6 and 8 years. The dress has a square yoke at front and back, and the fastening is to be found on the left shoulder.

9022—Ladies' Two Gored Gathered Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The skirt is gathered all around at the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

spring upon the destroyer the third time the Mounsey came up. As he leaped the Mounsey lurched away, and instead of landing in the middle of the deck as he had hoped to do, one of his legs caught in the cable on the side of the destroyer. Campbell pulled himself aboard, uninjured.

"Just when the destroyer was pulling away the last time," said Campbell today, "the men lined the rails or stood on the afterdeck waving farewell. A huge wave struck a crowd of about eighteen privates on the afterdeck and a dozen of them were swept into the sea to sure death, as it was impossible to save persons from waves running 60 to 70 feet high."

The news of the collision reached London Monday, but nothing was known of the fate of the Otranto until this morning, when the first reports came from Islay. The storm continued to make further attempt at rescue impossible. No ships pass close enough to that coast in rough weather to see a stricken vessel ashore.

GOOD CAKE WITHOUT EGGS OR SHORTENING

Two-thirds cup sugar, two cups sour milk, one teaspoon soda, two teaspoons baking powder, two squares chocolate, two and one-half cups flour, flavoring and a few nuts if desired. This may be baked either in loaf or layers. Corn syrup of course may be used instead of sugar.

DARK LOAF CAKE

One-half cup sugar, one cup rice, three-fourths cup syrup, three-fourths cup sour milk, one teaspoon soda, dissolved in milk, two tablespoons chocolate dissolved in hot water, one cup raisins, one and one-half cups barley flour, one and one-half cups purified rice bran, one-half teaspoon each of cinnamon, nutmeg and cloves.

Bake in a loaf 45 minutes. Put in slow oven and increase heat after 20 minutes.

PEANUT HONEY CANDY

One cup butter, two cups honey, one cup boiling water, few grains bicarbonate of soda, one cup shelled peanuts.

Chop the peanuts fine and spread over bottom of greased pan. Mix the other ingredients and cook to "hard ball" stage and pour over the peanuts; let partially cool; cut in strips. Roll and cut crosswise.

BLEACHING AGENTS

If white clothes become yellow through long storage or poor laundering, they may often be bleached by placing them in direct sunlight, according to Marjorie Shutt, of the Colorado agricultural college. "It should be remembered," Miss Shutt says, "that sunlight is effective only while clothes are moist. Hang moist in the sun and as the material dries, again dampen and allow to remain in the sunshine out of doors. Repeat wetting process several times if necessary until cloth loses its yellow tinge. The frost often whitens stubborn yellow.

"If a chemical must be used, Javelle water is probably the best bleach. To make Javelle water place one pound washing soda and one quart of boiling water in an agate kettle and stir until soda dissolves. Then allow solution to cool. Dissolve one half pound of chloride of lime in two quarts of cold water. Let settle and pour clear liquid into cool soda solution. Strain, bottle, and place in dark place as exposure to light causes loss in strength of solution.

"Use this mixed with equal parts or more of water and do not allow garments to remain in the solution, for even at best the fiber is weakened by the action of Javelle water. Rinse well and to the rinse water add a little vinegar, which will remove any odor and offset the action of any of chloride of lime remaining in fabric."

USE SENSE IN CANNING

We know it to be the tendency of the human race to run to extremes.

When we find such vegetables as carrots, parsnips or pork and beans being canned, it is time someone laid a restraining hand and said, "Stop! You are wasting your time, energy and fuel, filling your cans with articles that may be preserved just as satisfactorily in some more simple way."

Do not allow your zeal and enthusiasm to can your common sense and good judgment.—Elizabeth Quaker.

Shipments of sugar from Cuba to the United States are scarcely five per cent below last year's shipments for the corresponding time in spite of the serious shortage of ships. About three-fourths of our sugar imports this year have been from Cuba.

Out of the last harvest the American people, by abstinence, saved 140,000,000 bushels of wheat to feed the hungry Allied nations; and these same people are going to stay right on the sugar job and see it through.

The Tractor For Every Demand

You Cannot Afford to Wait

I have just been at the Cleveland Factory to increase my orders for tractors. We will get less. The Government has cut down the output. The big loss will come to the farmer for there will not be enough of all makes of tractors put together to go around and with the shortage of labor, thousands of acres of land will not be turned over this year. It is going to be a known loss to some farmers and the Government.

F. H. STOW

The Cleveland is small but powerful, it is simple but unusually economical. Comparatively light, yet heavy enough to do its work and keep on doing it.

You can fatten a hog without cost

on what your hogs waste, for it's wasted grain that eats hog profits. With a Calco Automatic Grain Feeder the hogs eat as much and as often as they like. But they can't waste grain. It slides down into the circular trough only as fast as consumed. It can't be rooted out.

Calco Automatic Grain Feeder

will pay for itself in a few months through grain saved. It is a permanent investment. Made of "Armco" rust-resisting galvanized iron with a cast iron base. Extremely durable, sanitary; can't be upset. The high cost of grain feed demands feeding economy—Calco Automatic Feeder is the answer.

Try one out—write today for literature and price list.

Prunes and Apricots. The Prune and Apricot Growers' Association have named following prices on apricots:
Standards 9½
Choice 18
Extra Choice 14½
Fancy 16
Extra Fancy 17½
Extra Moorparks 19
Slabs 11
Cash on delivery price on all grades will be 8 cents with the exception of standards and slabs on which it will be 6 cents.
Prunes: The government will take all the 50-60; 60-70; 70-80 sizes. The quotations sent to the trade last night are as follows:
The bulk prices will be:

Sizes:	Price per lb.
20-30	17
30-40	10¾
40-50	10
50-60	9
60-70	9
70-80	8¾
80-90	8¼
90-100	7¾
100-120	4¾
Above 120	4¼

One cent per pound, and one and one-fourth cents per pound will be added for 50 and 25-lb. boxes.

NUTS

The Almond Growers' Association has established opening prices as follows per pound:
Nonp. 27½
I.X.L. 25½
Ne Plus 24½
Drake 20
Outside dealers have named prices above these quotations and it is understood association stock is practically closed out and prices withdrawn.
Walnuts: Net prices have been named by the California Walnut Growers Association:
No. 1 Softshell 28
No. 2 Softshell 25
Jumbo 30
Fancy Budded 31½
Golden Gate Budded 29
Franquettes, Eurekas and other fancy varieties sold on sample. No. 1 Softshell guaranteed 88 per cent good; Fancy Budded, 90 per cent. In case of worms or damage by ants not more than five per cent.

RICE

California Rice—1917 crop, nominal; 1918 crop, when harvested per 100 lbs.: Paddy rice, 4.32; clean fy. Japan, 7½ lb.; ch. Japan, 7 3-8 lb.; fy. second head, 6 7-8 lb.; screenings, 5 5-8; lb.; brewers, 5¼ lb.; rice polish, $50 ton, car lots; rice bran, $36 ton, car lots.

BEANS

Jobbers' prices, cwt., recleaned:
Limas 12.40
Bayous .....7.50@7.75
Small Whites 11.00
Large Whites 9.40
Mexican Reds .....7.50@7.90
Blackeyes 6.90
Pinks .....7.40@7.50
Red Kidney .....Nominal
Cranberry .....Nominal
Teparies .....7.00@7.50

HONEY

Jobbers' prices:
White extracted .....20@22
Light amber extracted .....17@20
Amber extracted 16
White comb, cs. .....4.50@6.00
Light amber comb, cs. .....3.50@4.00
Beeswax .....32@34

HAY

Under date of October 19, Scott, Magner & Miller says:
Receipts past week 698 tons—last week, 553 tons.
As has been the case of the past two weeks, most of these arrivals have been alfalfa and grain hay that received the September rains and is more or less damaged. Some alfalfa that was in the stack during the rain and is now being baled shows up in fairly good condition although evidence of the rain can be seen through streaks of discolored hay, as well as a bleached color to the balance. Fancy wheat hay, as well as Red Oat hay, has sold during the week at our top quotations. The feature of the market this week is the placing of orders by the government for about 8000 tons of grain hay, most of which was placed with dealers in this city. This, no doubt, will have somewhat of a bearing on prices in country districts where trade has been quite dull of late. The present north winds, if followed by frost which is usually the case at this time of the year, may injure the green feed considerably although at the present time in most places the feed never was better.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling expenses must be added according to conditions.
Fancy Wheat Hay (light 5 wire bale) .....28.00@30.00
No. 1 Wheat or Wheat and Oat hay .....26.00@28.00
No. 2 Wheat or Wheat and Oat hay .....22.00@24.00
Choice Tame Oat hay .....25.00@27.50
Other Tame Oat hay .....22.00@24.00
Wild Oat hay .....22.00@24.00
Barley hay .....22.00@24.00
Alfalfa .....18.50@22.00
Stock hay (in order) .....18.00@21.00
No. 1 Barley straw, bale.....50@80
Damaged hay (all kinds), according to condition.
Other Tame Oat Hay .....22.00@24.00
Wild Oat Hay .....22.00@24.00
Barley Hay .....22.00@24.00
Alfalfa .....22.00@25.00

No. 1 Barley Straw, bale.....50@80
Damaged Hay (all kinds).....Nominal

SEEDS

Flax, lb. .....8@8½
Hemp .....Nominal
Millet .....5@5½
Rape .....2½@5

Citrus Fruit Market

Los Angeles, Oct. 23, 1918.

Two dollars per box was clipped off the price of oranges in one day in the New York market. A half of this however, was back the next day. The market conditions remain firm in all sections and small amount of fruit yet to go forward will sell at long prices. Many sales have been made above the $18.00 mark.
Lemons on the other hand are plentiful and being harvested in large quantity in all California orchards. In spite of heavy shipment prices are holding up, ranging around $7.00.

Shipments

Shipments of citrus fruits to date since November 1, 1917: Southern California; oranges 14,275 cars, lemons 5914, total 20,189. To same date last season, oranges 39,968, lemons 7664, total 47,632. Central California this season; oranges 2536, lemons 115, total 2651. Last season to same date; oranges 4665, lemons 164, total 4829. Northern California; oranges 203, last year same date 845.

AT THE AUCTIONS

October 16
New York: 10 Val., 4 lem. Val. 9.15-18.05, lem. 6.10-8.80.
Boston: 2 oranges, 1 lem. Val. 7.80-12.05, lem. 7.55-7.95.
St. Louis: 1 orange, 1 lem. Val. 8.80, lem. 6.45-6.95.
October 17
New York: 7 oranges, 6 lem. Val. 6.85-17.05, lem. 5.25-8.95.
Philadelphia: 4 oranges, 3 lem. Val. 11.05-13.35, lem. 7.20-9.00.
Boston: 2 oranges, 1 lem. Val. 11.30-12.80, lem. 8.10-8.20.
October 18
New York: 7 oranges, 2 lem. Val. 9.90-18.05, lem. 7.10-8.70.
Boston: 3 oranges, 1 lem. Val. 7.70-12.85, lem. 6.50-8.20.
Cleveland: 1 car lemons. Lem. 7.35-7.70.
October 21
New York: 21 oranges, 4 lem. Val. 9.10-18.05, lem. 9.40-10.00.
Boston: 4 oranges, 2 lem. Val. 6.20-11.70, lem. 6.40-8.05.
Philadelphia: 3 oranges, 2 lem. Val. 7.10-14.85, lem. 7.10-8.75.
Pittsburg: 1 oranges, 2 lem. Val. 11.95-15.95, lem. 6.00-8.30.
October 22
New York: 14 oranges. Val. 7.80-17.70.
Philadelphia: 3 oranges, 1 lem. Val. 8.95-13.80.
Boston: 3 oranges, 1 lem. Val. 9.55-11.10, lem. 7.65-8.00.
St. Louis: 1 car lemons averaging 9.25.

PARTIAL LIST CALIFORNIA FRUIT AND VEGETABLE SHIPMENT

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of products from California for the week ending October 7: Apples, 189; cabbage, 6; cantaloupes, 4; casabas, 3; carrots, 8; corn, 1; dried apricots, 11; dried beans, 120; dried carrots, 1; dried figs, 21; dried peaches, 26; dried pears, 3; dried prunes, 16; grapes, 1114; lettuce, 12; mixed fruit, 5; mixed vegetables, 14; mixed fruit and vegetables, 28; mixed dried fruit, 7; onions, 193; peaches. 22; pears, 55; peppers, 19; pomegranates, 1; potatoes, 458; quinces, 2; raisins, 110; sweet potatoes, 26; tomatoes, 121; watermelons, 11.

FRUIT AND VEGETABLE SHIPMENTS

From post card reports to the Los Angeles branch of the bureau of markets, report is made of the following shipment of cars of produce from California for the week ending October 21: Apples, 213; cabbage, 2; casabas, 7; cauliflower, 2; dried apples, 3; dried apricots, 12; dried beans, 136; dried figs, 12; dried peaches, 16; dried pears, 6; dried prunes, 16; grapes, 1572; lettuce, 1; garlic, 1; mixed fruit, 6; mixed vegetables, 16; mixed fruit and vegetables, 31; mixed dried fruit, 19; onions, 118; peaches, 19; pears, 47; peppers, 13; persimmons, 1; pomegranates, 5; potatoes, 229; pumpkins, 1; quinces, 1; raisins, 155; sweet potatoes, 35; tomatoes, 173; watermelons, 5.

ORGANIC MATTER IN SOIL

Continued from Page 415

the organic materials and silt that have been deposited there. All such material is hauled out and spread on the land.
It is evident, not alone from Director Stockdale's statement, but also from a very casual observation of the customs of the people hereabouts that the organic material problem is as real here as it is in California, despite the rank jungle growth that one sees at times. Where attention has not been paid to the problem by the farmers, crops are lacking—and there are some large tracts in southern India where that is the case. Rotation of crops for harvesting, which include certain of the legumes, are quite common, but to me the striking thing is the very general use of green manures —which is fully as common a practice here as it is with the citrus growers of California.

WEATHER CONDITIONS

San Francisco, Cal., October 19, 1918.

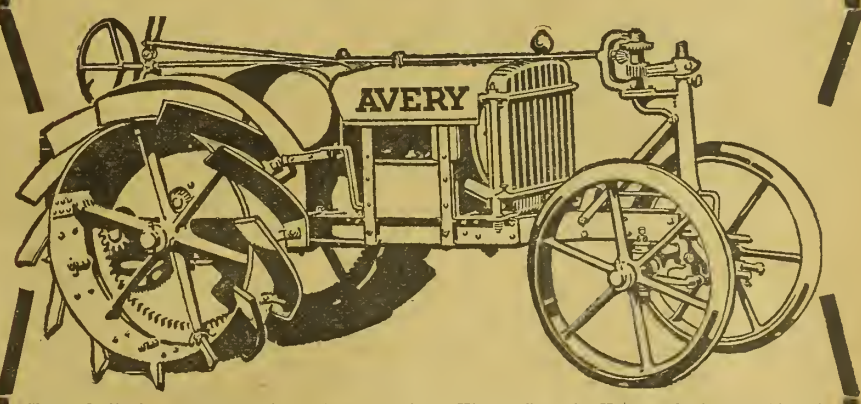
Avery 5-10 H.P. $650 Here



Four-Cylinders — Selective Gear Drive—Three-Speed Transmission — Hyatt Roller Bearings—Will do the work of four horses and costs only 15 cents per hour to operate.
The Avery Costs Less Than Any to Buy.
The Avery Costs Less Than Any to Operate.
The Avery Costs Less Than Any to Keep in Repair.
The Avery is the simplest tractor built, all parts are in plain sight and get-at-able.
The Avery by reason of its patented California Lugs is guaranteed to work in Sand or Mud. It will work in any place where any other tractor will, and in many places where others can not.
Write and let us tell you how an Avery will enable you to get a better and bigger yield with less work and at a smaller cost.

Tractor Work Gets Done When Bosch Is Used

THERE is no half-way business about the work of a Bosch-Equipt tractor—no falling down in the middle of the job. Bosch stands the gaff.

If a manufacturer puts Bosch Magnetos on his tractors, you can be sure his one big idea is to give you service, for Bosch costs him more than ordinary ignition systems. If he is careful enough to use Bosch, he is careful about the rest of his tractor, too.

BOSCH
MAGNETO IGNITION
WITH BOSCH IMPULSE STARTER

is a promise of real tractor service. If either your present tractor or the new one you decide upon has some other ignition system, have Bosch installed instead. Its rip-roaring sparks, its rugged sturdiness and its never-failing dependability will make a world of difference.

The Bosch Impulse Starter has ended starting troubles for Bosch users. Simple in design, but big and strong, it makes quick, easy starting a certainty.

The Bosch works and organization are deep in war service, but few, if any, kinds of war service are more necessary than yours. For the country's sake as well as your own, your tractor must keep working. Your ignition **must not fail.** You are entitled to a Bosch Magneto.

When you order a new tractor, specify "Bosch Magneto Ignition." For your present tractor, have Bosch fitted by the nearest Service Station.

Be Satisfied **Specify Bosch**

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

A view of a canal taking waters to the rice fields of Yolo County is on the cover of this issue. This is one of the many thousands of such scenes which might be shown of California irrigation systems. This view was taken where the canal leaves the Capay Valley for the rice fields. Yolo County has taken much pride in her war productions, and some months ago when it appeared she had gone her limit in preparation for grain production additional arrangements provided for the bringing of more water, and 10,000 more acres were planted.

California's producers have been important factors in the speeding up of food production.

CONVENTION WEEK

State Commissioner Hecke writes: "State Fruit Growers' and the four other conventions at Riverside postponed — it is hoped for only a short time."

WALNUT WORM

Last week we referred to the walnut worm and to the fact that Prof. Ralph E. Smith was working under direction of the Walnut Association to devise means of fighting this pest. We are glad to give in this week's paper more information, with engravings showing some results of the pest's work. We are indebted to the California Walnut Growers Association for use of these engravings.

NINETEEN DOLLARS A BOX

Some years from now when Valencia orange growers are taking prices somewhat less than they are today they will probably refer back to the old-time war days when California Valencias sold in New York for $19.00 per box. This is something better than a bit apiece, and this, bear in mind, is jobber's price direct from the car. Last year's top-notch was $12.50, which was close up to the record. Such prices are probably not any great help to the industry; however, they may help to attract attention to the worth of California fruit which is in such high favor.

WILLIAM WOOD

Uncle Billy Wood, for years horticultural commissioner of Los Angeles County, has passed. Mr. Wood was for many years a nurseryman and for years connected with the Los Angeles County horticultural commission as inspector. Six years ago he became commissioner, and the county never had a better. His every effort has been toward effecting competent horticultural service and extending California's wealth through her orchards and vineyards. The funeral was held last Monday in one of the parks of his home city, Whittier, which turned out to honor one of her most faithful servants.

A PURE-FEED LAW

The California Swine Breeders' Association announces that as an organization they propose to have introduced before the next legislature a pure feed bill embodying all the desirable features of feed control laws in operation in other states. Here is a splendid opportunity for every live stock organization in California to line up behind a bill that will mean thousands of dollars annually to the users of feed. At the present time, when greater quantities of mixed feeds are on the market than ever before, the feeders of this state are without real protection. Certainly with present prices of feeds the buyer is entitled to know what he is getting for his money.

The operation of a pure feed law will in no way react to the disadvantage of any person save the dishonest and unscrupulous manufacturer or dealer.

All that such a law requires is that the sack be labeled as to its contents and that the contents be just what the label calls for.

This bill when introduced in the legislature should have the combined and active support of all live stock organizations. Each individual user of feed should make it his particular duty to see that his representative and senator has impressed upon him the need and importance of this bill.

SAVED COAL

The fuel administration estimates that approximately a million and a quarter tons of coal have been saved in the United States during the past seven months as a direct result of daylight saving. The daylight saving scheme ended at two o'clock last Sunday morning, when all trains and clocks were stopped for one hour. Solar time will prevail until the last Sunday of March, when, unless the present law is changed, clocks will again be pushed ahead.

THE "FLU"

The "flu" has raised Cain with things in general and with conventions and fairs in particular. The Liberty Fair in Los Angeles is now three weeks overdue; the California International, due to open today in San Francisco, now announces November 16 as opening day. But the Liberty Fair, which had planned for its deferred opening today, November 2, is still indefinitely continued until authorities can agree that danger from influenza has passed. Practically all activities, even to the movies, have been discontinued. Health boards have done their best; scores of physicians and nurses have given their lives in their fight against the disease. California business interests feel that they have been hard hit, but the situation is no worse than in other sections of the country.

CALIFORNIA'S LABOR PROBLEMS

There will be a conference of those interested in California's labor problems at the quarters of the council of defense, Ferry Building, San Francisco, beginning Friday morning, November 8. The conference is under the direction of the state council of defense and the United States department of agriculture. The conference will open with five minute reports from delegates representing the farm side of the labor problem. There will be other addresses outlining the scope of other organizations having help to offer, then discussions of farm losses because of labor shortage in '18, as to aid which may be given by state and federal employment service, the greater use of women in agricultural work, the United States working reserve, feasibility of anti-vagrancy legislation, standardization of farm wages, and better utilization of Mexican labor.

It is possible the conference may result in the organization of a farm labor council which shall endeavor to bring together all other labor activities to the end that better labor conditions may prevail in 1919.

THE GREAT ADVENTURE

The Cultivator has taken no hand whatever in the discussion of the merits of the vast number of initiative and other measures to be voted upon at the election next Tuesday, November 5. But there is one measure which calls for serious consideration on the part of every farmer, so we take the liberty of calling attention to Number 19, "Land Values Taxation." This is the single tax measure which for years has been before California voters. Provisions of this measure are so familiar we will not enlarge upon them other than to call attention of every land owner in California to the fact that the values of his land and all realty holdings in the state are endangered by this measure. We grant that there is great injustice in the matter of valuations of land under our present assessment system, and this must be corrected, but to wipe out all values that a few large land holders may be punished is simply cutting off your nose to spite your face.

The organ of the single taxers is "The Great Adventure," which is certainly a well chosen name, for it will prove a "great adventure" to many a farmer's hopes if single tax prevails.

Vote No on Number 19.

GONE TO WASHINGTON

George E. Farrand, one of California's ablest attorneys, and who has guided many of our cooperative organizations through legal tangles to a solid and substantial position amongst commercial organizations, has been drawn to aid the food administration in its war work at Washington. The legal work of the walnut and other associations will be handled by Mr. Farrand's office during his absence, which will probably be until the end of the war.

This Week's War Notes

The advance of the Allied troops through Bulgaria and Servia is almost unopposed. The Allies are not far from Belgrade.

Austria-Hungary replies to the president, practically accepting all of the conditions made in his last note, and asks President Wilson to take up with the Allies negotiations for an armistice and peace.

During the past week this government has loaned Belgium $9,000,000, making a total loaned to that country of $180,020,000. This country's total loans to Allied governments now aggregate $7,529,476,666.

Both Austria and Turkey appear to be at the breaking point and are asking the Allies for peace at any price. Vienna's plea for an armistice is interpreted in military circles as capitulation as complete as that of Bulgaria.

The Allied drive continues, though the northern end of the line near Holland has been more quiet than the preceding week. American guns are now thundering at Metz and French and British troops are still active northwest of Verdun.

The drive of the Allies on the Italian front netted 15,000 prisoners on Monday. The Italians have crossed the Piave and have driven wedges in the Austrian line at many points. Up to Monday night the casualties of the Austrians were estimated at 72,000. Austrian troops who have been captured know nothing of the peace drives.

The Versailles conference has outlined its terms, including withdrawal of all Teutonic troops from invaded territory, surrender of all ordnance and ammunition, demobilization, surrender of frontier fortresses, release of Allied prisoners, retention of German prisoners until restoration, surrender of all submarines, Helgoland and Kiel.

The international center has shifted from Washington to Versailles, where representatives of the Allied governments are discussing terms of an armistice which may be granted to the Central Powers. The general impression is that these terms will be practically unconditional surrender. E. M. House is President Wilson's representative at the conference.

Ludendorf has resigned. The belief held by some is that his resignation is due to change in internal government by which civil authorities may have "undue" power over the military arm of the government; others think he took this action because of coming defeat or internal dissension. German newspapers have also reported rumors of Marshal von Hindenburg's resignation.

Only rumors are available as to internal conditions in Austria-Hungary, but these are unanimous that near-anarchy prevails, especially in Croatia, where riots have caused the death of hundreds. The German kaiser says: "I will not abandon my sorely-tried people, but if necessary I am ready to become something like hereditary president of a German republic, like the kings of England and Belgium."

President Wilson's reply to Germany, dated October 23, was printed in both English and German in some of the Berlin papers. The president suggested "Nothing can be gained by leaving this essential thing unsaid." "This essential thing" was in effect that the Allies would in no way deal with those who have been the military masters of the German people. This because they did not follow the rules of civilized warfare and were lacking in common honor and integrity.

Purebred Stock---Thoroughbred Men

"WE CAN make better men by using $500 cows than by using $50 cows." This is not the motto, nor even the slogan, of an educational institution, but an off-hand expression of the director of the greatest feature in a movement which has for its aim the making of better citizens. In fact, its motto is: "Nothing without labor." And the labor chosen as the most educational in the making of better citizens is agricultural labor.

Practical and Attractive Milk House

It is easy to produce good milk in this milk house because it is efficiently designed and the boys take pride in keeping it clean.

The director is R. A. Condee, director of agriculture of the California George Junior Republic. This Republic, by the way, is, we believe, the smallest in the world. In saying this, we make due apologies to San Marino, the tiny republic within the kingdom of Italy, whose total population is little over 9000, and whose area is only 32 square miles, and whose regular army consists of one regiment and one cannon which may not be fired for fear the shot will land outside the republic.

This George Junior Republic is located at Chino, San Bernardino County. The lands included within its boundaries aggregate 270 acres and they are used to give 60 young men above the age of 14 years opportunity to learn the truth of the Republic's motto, "Nothing without labor". But as Director Condee intimated regarding the influence of pure bred stock, the Republic also believes it can make better citizens with attractive surroundings. So the well built "state" buildings, the office, dining hall, library, even the jail, are given a most beautiful setting on the hills overlooking the rich Pomona Valley.

There are perhaps a score of buildings located on these sightly hills, the most prominent of which is Casa Colina, the home of Mrs. Margaret B. Fowler and built on the property of the Republic to be used as a settlement house and temporary home for herself or others interested in the work of the Republic.

The 60 boys are not housed in a large dormitory, but in cottage homes, each with its matron, but all dine together as one large family, a matron to each table. Except for three or four hours of schooling each day the boys put in their time at farm work. Each one is allowed his own plot of garden or small portion of the field, and some, who show particular adaptability to live stock raising, are permitted to care for and own stock of their own. One of the boys is just completing payment on a liberty bond which was secured through sales of pure bred stock which he had cared for. Others are taught the handling of tractors, plows, and disks, and the cutting of silage and other power farming operations.

As Mr. Condee indicated regarding the influence of high quality live stock in the making of men, the same influence obtains in general farming operations. The son of the farmer whose repair shop appliances are principally baling wire and old tin cans is reasonably sure to continue the father's makeshift methods.

Of the live stock and the farming methods Mr. Royce will speak later. But as to the making of men from boys whose opportunities are not of the best the institution is unique.

Part of the Dairy Plant

The milking barn and silo have just been completed. The new feeding barn is in course of construction.

The citizens consist of two classes of boys; those who have been called before the juvenile court, and whom the judge feels have in them the "right stuff" to profit by the Republic; and those placed there by parents or guardians either unable to provide suitable homes for their boys or failing to control them. In every case possible the Republic boys councilor visits the boy in his home. If found to be a youth the Republic can help, he is taken on 60 days probation. Citizens are selected carefully, for all over California, and even in Arizona, there are boys who need the influence of the Republic, and as only about 70 can be cared for, the school is obliged to choose boys with the biggest possibilities for the making of true men.

Self government prevails. In fact, there is a government building and a jail. When a "citizen" fails to walk properly he is haled before the mayor or the magistrate, and if he is found guilty he is promptly "canned" or given a turn in jail.

Every boy is paid for his labor in aluminum "coin of the realm" which coin is good for the board, laundry or other service rendered by the "Republic."

Recognizing the fact that a man with no religious training is lacking in best citizenship, Mr. Lucas, the boys councilor acts as all 'round adviser and helper for the boys. Sectarianism is taboo but when Mr. Lucas learns as to a boy's tendencies or preferences in a religious way he encourages him so far as possible in that belief. If a boy comes from a Jewish home then he is reminded of Jewish new year and feast days and informed in that belief. Likewise if Protestant, Catholic or other belief.
